What does the Web look like? How can we find patterns, communities, outliers, in a social network? Which are the most central nodes in a network? These are the questions that motivate this work. Networks and graphs appear in many diverse settings, for example in social networks, computer-communication networks (intrusion detection, traffic management), protein-protein interaction networks in biology, document-text bipartite graphs in text retrieval, person-account graphs in financial fraud detection, and others. In this work, first we list several surprising patterns that real graphs tend to follow. Then we

give a detailed list of generators that try to mirror these patterns. Generators are important, because they can help with "what if" scenarios, extrapolations, and anonymization. Then we provide a list of powerful tools for graph analysis, and specifically spectral methods (Singular Value Decomposition (SVD)), tensors, and case studies like the famous "pageRank" algorithm and the "HITS" algorithm for ranking web search results. Finally, we conclude with a survey of tools and observations from related fields like sociology, which provide complementary viewpoints. Table of Contents: Introduction / Patterns in Static Graphs / Patterns in Evolving Graphs / Patterns in Weighted Graphs / Discussion: The Structure of Specific Graphs / Discussion: Power Laws and Deviations / Summary of Patterns / Graph Generators / Preferential Attachment and Variants / Incorporating Geographical Information / The RMat / Graph Generation by Kronecker Multiplication / Summary and Practitioner's Guide / SVD, Random Walks, and Tensors / Tensors / Community Detection / Influence/Virus

Premiering in 1990 in Antibes, France, the European Conference on Computer Vision, ECCV, has been held biennially at venues all around Europe. These conferences have been very successful, making ECCV a major event to the computer vision community. ECCV 2002 was the seventh in the series. The privilege of organizing it was shared by three

universities: The IT University of Copenhagen, the University of Copenhagen, and Lund University, with the conference venue in Copenhagen. These universities lie geographically close in the vivid Oresund region, which lies partly in Denmark and partly in Sweden, with the newly built bridge (opened summer 2000) crossing the sound that formerly divided the countries. We are very happy to report that this year's conference attracted more papers than ever before, with around 600 submissions. Still, together with the conference board, we decided to keep the tradition of holding ECCV as a single track conference. Each paper was anonymously refereed by three different reviewers. For the final selection, for the first time for ECCV, a system with area chairs was used. These met with the program chairs in Lund for two days in February 2002 to select what became 45 oral presentations and 181 posters. Also at this meeting the selection was made without knowledge of the authors' identity.

A Breakthrough Framework for Adaptive Project Management from Project Management Guru Robert K. Wysocki For an increasing number of critical projects, traditional project management models simply are not appropriate. In many cases, complete requirements and objectives cannot be specified up front, and significant changes cannot be avoided. What's needed is an entirely new framework for project management: one that combines agile methods with the profession's most enduring best practices. In this book, Robert K. Wysocki provides that framework—the Adaptive Project Framework (APF)—and shows how to apply it in any domain. Wysocki, one of the world's leading project management consultants, has spent decades helping large organizations succeed with complex projects. Drawing on everything he's learned, he explains why a fundamentally new framework is needed and introduces all five phases of that framework. He covers artifacts, processes, and deliverables, and shows how to utilize each phase most effectively in your environment.

Through four detailed case studies, you'll discover how APF can help you adapt to unexpected events, encouraging creative responses based on open partnerships between clients and project teams. Coverage includes Bringing greater flexibility and speed to any project, regardless of its goals or context Moving forward successfully with projects that have vague requirements Discovering what clients really want, not just what they say they want Managing ongoing scope changes throughout a project Customizing APF to your own environment Integrating APF with existing agile software development methods Using APF to overcome the obstacles to success Preparing for the future of project management

This book is written for every project participant—project and program managers, software and product developers, process designers, and business analysts—who needs to deliver results in a world that won't stand still.
