This text helps students hit the road with a practical set

of tools, and the confidence they need to use those tools effectively in making business decisions. The goal is to introduce a new "Principles of Accounting" text that better reflects a more conceptual and decision-making approach to the material. The authors have taken a new "macro- to micro-" approach to the Principles of Accounting course by starting with a discussion of real financial statements first, rather than starting with the Accounting Cycle (although the Accounting Cycle is thoroughly covered in Chapters 3 and 4). The objective is

to establish how a financial statement communicates the financing, investing, and operating activities of a business to users of accounting information. They motivate students by grounding the discussion in the real world, showing them the relevance of the topics covered to their future career.

semester accounting course that covers the fundamentals of financial and managerial accounting. This book is specifically designed to appeal to both accounting and non-accounting majors, exposing students to the core concepts of accounting in familiar ways to build a strong foundation that can be applied across business fields. Each chapter opens with a relatable real-life scenario for today's college student. Thoughtfully designed examples are presented throughout each chapter, allowing students to build on emerging accounting knowledge. Concepts are further reinforced through applicable connections to more detailed business

processes. Students are immersed in the "why" as well as the "how" aspects of accounting in order to reinforce concepts and promote comprehension over rote memorization. *ACCT1002/21E Pre-university Accounting* Macmillan Education AU Research has shown that deep learning is enhanced by shortening the time between the introduction of new material and student interaction with this material. It is therefore important that students have an early opportunity to apply what they

have learnt and gain mastery of it. The student workbook contains all the questions from the text together with answer space, following the format of the external examinations. It has been designed to enable students to experience early success with simple exercises by having these partially worked. This success gives students the confidence to progress through to more challenging examples on their own. Use of the workbook enables

students to focus on concepts and procedures immediately without the necessity of learning a particular format by heart before they can begin. Over time, format becomes second nature as students develop a conceptual understanding of the purpose of each exercise. The use of workbooks also provides more time for students to interact with the subject matter itself and hence offers greater opportunity for them to master basic concepts

through practice. It is suggested that students should not destroy pages when errors are made; rather than rewriting an entire question, a correction in a different coloured ink will often suffice. The student may then proceed to a new task which provides the opportunity to relearn the point which has been missed. The corrected exercises provide a focus for revision and a useful resource for independent study.
