There is at present around £46 billion of outstanding student loans on the Government's books, and this figure is set to rise dramatically to £200 billion by 2042 (in 2013 prices). By 2042 there will be an estimated 6.5 million borrowers of student loans. At the same time estimates for the amount of loans that will not be repaid are also rising and the Government assumes that 35-40% of outstanding loans will never be repaid. That is some £16 billion to £18 billion on the current debt of £46 billion and £70 billion to £80 billion on the estimated value of student loans by 2042. The Department for Business, Innovation & Skills (the Department) is not doing enough to secure value for money from its collection arrangements. The Department is unable to accurately forecast student loan repayments, and does not have a sufficient understanding of the likely future cost of non-repayment to the taxpayer. The Student Loans Company is not doing enough to ensure that it identifies and collects all the repayments due, given

the substantial size of the financial assets involved, and will need to demonstrate value for money from the proposed sale of the student loans book.

Research has shown that deep learning is enhanced by shortening the time between the introduction of new material and student interaction with this material. It is therefore important that students have an early opportunity to apply what they have learnt and gain mastery of it. The student workbook contains all the questions from the text together with answer space, following the format of the external examinations. It has been designed to enable students to experience early success with simple exercises by having these partially worked. This success gives students the confidence to progress through to more challenging examples on their own. Use of the workbook enables students to focus on concepts and procedures immediately without the necessity of learning a particular format by heart before they can begin. Over time, format becomes second nature as students develop a conceptual understanding of the purpose of each exercise. The use of workbooks also provides more time for students to interact with the subject matter itself and hence offers greater opportunity for them to master basic concepts through practice. It is suggested that students should not destroy pages when errors are made; rather than rewriting an entire question, a correction in a different coloured ink will often suffice. The student may then proceed to a new task which provides the opportunity to relearn the point which has been missed. The corrected exercises provide a focus for revision and a useful resource for independent study.
