Principles of Accounting is designed to meet the scope and sequence requirements of a two-semester accounting course that covers the fundamentals of financial and managerial accounting. This book is specifically designed to appeal to both accounting and non-accounting majors, exposing students to the core concepts of accounting in familiar

ways to build a strong foundation that can be applied across business fields. Each chapter opens with a relatable real-life scenario for today's college student. Thoughtfully designed examples are presented throughout each chapter, allowing students to build on emerging accounting knowledge. Concepts are further reinforced through applicable connections to more detailed business

processes. Students are immersed in the "why" as well as the "how" aspects of accounting in order to reinforce concepts and promote comprehension over rote memorization.

"Introductory Financial Accounting, 9e" provides a unique and perfect blend of robust financial statement analysis with early statement of cash flows coverage. It is directed at those who will analyze real financial statements, and make business decisions based upon that

analysis. Real statements are used throughout (Starbucks). Statement of Cash Flows comes earlier in this book than most. Material is focused on analysis of financial statements -- ratios introduced early and often, special "Portfolio" section provides a "road map" to financial statement analysis, and special section in end-of-chapter problems focuses on analyzing financial statements (using Starbucks financial statements). Features strong coverage of statement of cash flows (Ch 5) --an essential financial statement, one of growing importance, and should be regarded as a basic statement. For financial accountants.
