Learning Financial Accounting can often feel like learning a foreign language to students, in particular when terminology and procedure is piled on before core concepts are truly mastered. Introductory Financial Accounting for Business is an innovative approach that emphasizes critical thinking over the rote memorization of terms, such as “ debits ” and “ credits ” . The sequential learning model employed by the authors helps students see the bottom-line consequences of financial statements as it relates to the overall business, better preparing them for careers as accountants, entrepreneurs, and decision-makers. The authors focus initially on conceptual underpinnings -- the reasons why we approach procedures the way we do – rather than confusing students by front-loading the material with over-complicated details. Author Chris Edmonds has also created a highly popular and widely used series of video lectures, which engage students by clearly and charismatically going over each learning objective in a conversational style. These videos help reinforce important lessons and are always available for review. By developing this stronger foundation, students understand Accounting ideas more broadly and are able to ultimately learn procedural applications more quickly and accurately. With a straightforward writing style and highly engaging video lectures, this dynamic author team leads students down a streamlined learning path focused on critical thinking, clarity of concept, and applicability of material to the real world.

Learning Financial Accounting can often feel like learning a foreign language to students. Before students even grasp the underlying concepts of Accounting, they are immersed in unfamiliar terms, and before students fully realize the purpose of financial statements, they are asked to make detailed recording procedures. This early emphasis on terminology and recording can be a struggle for non-accounting majors to see the relevancy, leading to increased dropouts and higher failure rates. This creates a challenge for Financial Accounting instructors, who must balance the need to engage and retain non-majors while fully preparing Accounting majors for the next level. The authors of Introductory Financial Accounting for Business offer a solution emphasizing an analytical approach to Accounting – teaching students to think like business professionals and speak in terms of bottom-line consequences: How will a given transaction impact my overall business? How can I make better business decisions whether I'm an accountant, manager, or entrepreneur? Business leaders are demanding that new graduates have these critical thinking skills in order to handle a rapidly changing modern business environment. Today's students will encounter new technological advances in automated data capture, data analytics, and artificial intelligence – processes that are automating traditional recording procedures. Rather than tallying transactions, students will be required to analyze and interpret data, making decisions early and often and thinking like business professionals. The Edmonds/Olds team's fresh approach and modern pedagogy helps prepare students for their business careers.
