Why should I do business with you... and not your competitor? Whether you are a retailer, manufacturer, distributor, or service provider – if you cannot answer this question, you are surely losing customers, clients and market share. This eye-opening book

reveals how identifying your competitive advantages and trumpeting them to the marketplace is the most surefire way to close deals, retain clients, and stay miles ahead of the competition. The five fatal flaws of most companies: ? They don't have a competitive advantage but think they do ? They have a competitive advantage but don't know what it is—so they lower prices instead ? They know what their competitive advantage is but neglect to tell clients about it ? They mistake “strengths” for competitive advantages ? They don't concentrate on competitive advantages when making strategic and operational decisions The good news is that you can overcome these costly mistakes – by identifying your competitive advantages and creating new ones. Consultant, public speaker, and competitive advantage expert Jaynie Smith will show you how scores of small and large companies substantially increased their sales by focusing on their competitive advantages. When advising a CEO frustrated by his salespeople's inability to close deals, Smith discovered that his company stayed on schedule 95 percent of the time – an achievement no one else in his industry could claim. By touting this and other competitive advantages to customers, closing rates increased by 30 percent—and so did company revenues. Jack Welch has said, “If you don't have a competitive advantage, don't compete.” This straight-to-the-point book is filled with insightful stories and specific steps on how to pinpoint your competitive advantages, develop new ones, and get the message out about them. “The biggest marketing flaw in most companies is their failure to fully reap the benefits of their competitive advantages. Either they think they have a competitive advantage but don't. Or they have one and don't realize it. Or they know they have a strong competitive advantage but fail to promote it adequately to their customers and prospects. “In my research with middle-market companies, I found only two CEOs out of 1,000 who could clearly name their companies' competitive advantages. The other 99.8 percent could offer only vague, imprecise generalities. These same CEOs often rely on outside consultants to guide strategic-planning sessions. Yet, in my experience, very few consultants – even seasoned ones – give competitive advantage evaluation more than a superficial glance.... “Ignoring your competitive advantages can be an expensive and even fatal mistake. Because no matter the size of your company or the kind of business you are in, your competitive advantages should be the foundation of all your strategic and operational decisions. They're the reasons customers choose to buy from you instead of the other guy.” – From Creating Competitive Advantage

Learning Financial Accounting can often feel like learning a foreign language to students, in particular when terminology and procedure is piled on before core concepts are truly mastered. Introductory Financial Accounting for Business is an innovative approach that emphasizes critical thinking over the rote memorization of terms, such as “debits” and “credits”. The sequential learning model employed by the authors helps students see the bottom-line consequences of financial statements as it relates to the overall business, better preparing them for careers as accountants, entrepreneurs, and decision-makers. The authors focus initially on conceptual underpinnings -- the reasons why we approach procedures the way we do -- rather than confusing students by front-loading the material with over-complicated details. Author Chris Edmonds has also created a highly popular and widely used series of video lectures, which engage students by clearly and charismatically going over each learning objective in a conversational style. These videos help reinforce important lessons and are always available for review. By developing this stronger foundation, students understand Accounting ideas more broadly and are able to ultimately learn procedural applications more quickly and accurately. With a straightforward writing style and highly engaging video lectures, this dynamic author team leads students down a streamlined learning path focused on critical thinking, clarity of concept, and applicability of material to the real world.

Over the past 10 years, object technology has gained widespread acceptance within the software industry. Within a wider context, however, it has made little impact on the core applications which support businesses in carrying out their tasks. This volume contains a collection of papers establishing the need for Business Objects, with particular reference to work undertaken by the Object Management Group (OMG). The emphasis is on defining an agenda for establishing Business Object standards and architectures, for developing software technology to support Business Objects applications and managing object oriented development projects. The wide variety of papers presented, and their authors' expertise, make this book a significant contribution to the development of Business Objects and their management.
