An Age of Accountability highlights the role of test-based accountability as a policy framework in American education from 1970 to 2020. For more than half a century, the quest to hold schools and educators accountable for academic achievement has relied almost exclusively on standardized assessment. The theory of change embedded in almost all test-based accountability programs held that assessment with stipulated consequences could lead to major improvements in schools. This was accomplished politically by proclaiming lofty goals of attaining universal proficiency and closing achievement gaps, which repeatedly failed to materialize. But even after very clear disappointments, no other policy framework has

emerged to challenge its hegemony. The American public today has little confidence in institutions to improve the quality of goods and services they provide, especially in the public sector. As a consequence, many Americans continue to believe that accountability remains a vital necessity, even if educators and policy scholars disagree.

This book traces the personal and intellectual histories of six remarkable women anthropologists, using a rich cocktail of archival sources.

The Commercial & Financial Chronicle Woodhead Publishing

Comic book audience expectations have fluctuated dramatically through the years, and comic book creators have had to adapt to

shifting reader concerns. One end of the Cold War, and 9/11 of Marvel Comic's most popular influenced popular franchises for five decades, the Avengers have always been reflective of their times, having adapted to an evolving readership to remain relevant. This collection of fresh essays by popular culture scholars examines Avengers story lines such as the Korvac Saga, Civil War, and Secret Invasion, and scrutinizes key characters including the Black Panther and Hank Pym. Essays explore how real-world events such as the Cuban Missile Crisis, the Vietnam War, the

entertainment in America. The Euro Trap John Wiley & Sons This book explores women ' s militant activities in insurgent wars and seeks to understand what women ' do ' in wars. In International Relations, inter-state conflict, anti-state armed insurgency and armed militancy are essentially seen as wars where collective violence (against civilians and security forces) is used to achieve political objectives. Extending the notion of war as ' politics of injury' to the armed militancy in Indian administered Kashmir and the Tamil armed insurgency in Sri Lanka, this book explores how women participate in militant wars, and how that politics not only shapes the gendered understandings of women ' s identities and bodies but is in turn shaped by them. The

case studies discussed in the book offer new comparative insight into two different and most prevalent forms of insurgent wars today: religio-political and ethno-nationalist. Empirical analyses of women ' s roles in the Sri Lankan Tamil militant group, the LTTE and the logistical, ideological support women provide to militant groups active in Indian administered Kashmir suggest that these insurgent wars have their own gender dynamics in recruitment and operational strategies. Thus, *Women and Militant Wars* provides an excellent insight into the gender politics of these insurgencies and women ' s roles and experiences within them. This book will be of much interest to students and scholars of critical war and security studies, feminist international relations, gender studies, terrorism and political violence, South Asia studies and IR in general.

The world has become obsessed with the Western notions of progress, development, and globalization, the latter a form of human and economic homogenization. These processes, through the aegis of the United Nations, are comparatively monitored. Those nations deemed to be ' lagging behind ' are then provided with foreign aid and developmental assistance. For nearly seventy years, India has sought its place in this global endeavour; yet, even today, abject poverty and backwardness can be observed in districts in almost every state; with the highest concentration of such districts found in the state of Bihar and a cultural enclave, known as Mithila. Development in India has been elusive because it is difficult to define; and

because the Western concepts of development and progress have no absolute equivalents within many non-Western settings. As a consequence, development programmes often fail because they are unable to ask the right questions, but equally important is the political economy derived from foreign aid. For politicians, there is no long-term benefit to be derived from successful development. In general, foreign aid only serves to corrupt governments and politicians and, in the end, does very little for those who need help. The struggling states of Bihar and Mithila serve as extreme examples of India ' s problems. Development here has been thwarted by a hereditary landed aristocracy supported by religion, casteism, custom, social stratification, tradition, and patterns of behaviour that can be traced back millennia. In turn, all these have been masterfully manipulated by co-opted politicians, who have turned politics into a veritable art form as this volume comprehensively demonstrates.

Monochrome Cornell University Press

This book investigates the extent to which the EU has defined and operationalised the notion of effective multilateralism. Reform has dominated the agenda of the EU in recent years with the adoption and implementation of the Lisbon Treaty. However, various international organisations have also been in reform mode in an attempt to adjust their structure to the changing polarity and counter criticisms about a lack of legitimacy, accountability and effectiveness. The EU and Effective Multilateralism examines the EU ' s

intention to make multilateral settings more effective, as formulated by the European Security Strategy in December 2003. Firmly grounded in new empirical research, it provides a balanced account of the fit between internal reform (the institutional reform within the EU, notably following the entry into force of the Lisbon Treaty) and external reform (the institutional reform of the international reform in which the EU operates). This book will be of much interest to students of EU politics, European security, international organisations, foreign policy and IR in general.

Psychologists Magazine July 2021 Infinite Study Bioenergy is coming to be seen as a priority on the international agenda, with the use of liquid biofuels a key strategy in the attempt to meet both the demand for environmental sustainability and the energy needs of countries. The growth in the production and use of biofuels around the world has led to increased interest and discussion about this subject. Given the dynamics of this phenomenon, the organizers of this book, based on more than 10 years experience of joint research on this subject, seek to address key issues relating to the production and marketing of liquid biofuels using the Brazilian experience with ethanol and biodiesel as an illustrative case, as well as the experiences of the leading producers and consumers of biofuels. The topics to be covered in this book include the role of public policies in fostering the

emergence of the biofuels industry, the main socio-economic, environmental, technological aspects and the prospects for the sector. The conceptual and methodological bases that provide analytical support to the book are based on recent research published in indexed journals. The structure and content of the book seek to address some central issues regarding: How the biofuel industries have emerged and developed in different countries? What factors have been crucial to the success or failure of different production initiatives? What are the main socio-economic-environmental impacts of the production and consumption of liquid biofuels? How are national and international markets for liquid biofuels being structured? To what extent and/or in what conditions can the experiences and lessons learned at the national level be transferred and adapted in other countries? Finally, based on the scenarios, the prospects for liquid biofuels will be discussed.

This book offers a critical assessment of the history of the euro, its crisis, and the rescue measures taken by the European Central Bank and the community of states. The euro induced huge capital flows from the northern to the southern countries of the Eurozone that triggered an inflationary credit bubble in the latter, deprived them of their competitiveness, and made them vulnerable to the financial crisis that spilled over from the US in 2007 and 2008. As private capital shied away from the southern countries, the ECB helped out by providing credit from the local money-printing presses. The ECB became heavily exposed to investment risks in the process, and subsequently had to be bailed out by intergovernmental rescue operations that provided replacement credit for the ECB credit, which itself had replaced the dwindling private credit. The interventions stretched the legal structures stipulated by the Maastricht Treaty which, in the absence of a European federal state, had granted the ECB a very limited mandate. These interventions created a path

dependency that effectively made parliaments vicarious agents of the ECB's Governing Council. This book describes what the author considers to be a dangerous political process that undermines both the market economy and democracy, without solving southern Europe's competitiveness problem. It argues that the Eurozone has to rethink its rules of conduct by limiting the role of the ECB, exiting the regime of soft budget constraints and writing off public and bank debt to help the crisis countries breathe again. At the same time, the Eurosystem should become more flexible by offering its members the option of exiting and re-entering the euro - something between the dollar and the Bretton Woods system - until it eventually turns into a federation with a strong political power centre and a uniform currency like the dollar.

Concerns about CBRN (Chemical, Biological, Radioactive, Nuclear) weapons have featured

prominently in both political debates and media reporting about the ongoing threat from al Qaeda since 9/11. This book provides a chronological account of al Qaeda's efforts to acquire a CBRN weapon capability, and the evolution of the al Qaeda leadership's approach to actually using CBRN weapons, set against the context of the politicisation of the threat of CBRN terrorism in US security debates. Ben Cole explores how the inherently political nature of terrorist CBRN threats has helped to shape al Qaeda's approach to CBRN weapons, and shows how the heightened political sensitivities surrounding the threat have enabled some governments to manipulate it in order to generate domestic and international support for controversial policies, particularly the 2003 invasion of Iraq. He assesses the relative success of the al Qaeda leadership's political approach to CBRN weapons, together with the

relative success of efforts by the US, UK and Russian governments to exploit the al Qaeda CBRN threat for their wider political purposes. Shedding new light on al Qaeda's tactics and strategy, this book will be essential reading for scholars of terrorism and extremism studies.

Pinnacle Financial Statements Springer

In *Imposing Standards*, Martin Hearson shifts the focus of political rhetoric regarding international tax rules from tax havens and the Global North to the damaging impact of this regime on the Global South. Even when not exploited by tax dodgers, international tax standards place severe limits on the ability of developing countries to tax businesses, denying the Global South access to much-needed revenue. The international rules that allow tax avoidance by multinational corporations have dominated political debate about international tax in the United States and

Europe, especially since the global financial crisis of 2007 – 2008. Hearson asks how developing countries willingly gave up their right to tax foreign companies, charting their assimilation into an OECD-led regime from the days of early independence to the present day. Based on interviews with treaty negotiators, policymakers and lobbyists, as well as observation at intergovernmental meetings, archival research, and fieldwork in Africa and Asia, *Imposing Standards* shows that capacity constraints and imperfect negotiation strategies in developing countries were exploited by capital-exporting states, shielding multinationals from taxation and depriving nations in the Global South of revenue they both need and deserve. Thanks to generous funding from the Gates Foundation, the ebook editions of this book are available as Open Access volumes from Cornell Open

Critics and alternative theories Cambridge University Press

Global studies is a fresh and dynamic discipline area that promises to reinvigorate undergraduate and postgraduate education in the social sciences and humanities. In the Australian context, the interdisciplinary pedagogy that defines global studies is gaining wider acceptance as a coherent and necessary approach to the study of global change.

Through the Global Studies Consortium (GSC), this new discipline is forming around an impressive body of international scholars who define their expertise in global terms. The GSC paves the way for the expansion of global studies programs internationally

and for the development of teaching and research collaboration on a global scale. Mark Juergensmeyer and Helmut Anheier ' s forthcoming Encyclopaedia of Global Studies with SAGE is evidence of this growing international collaboration, while the work of Professor Manfred Steger exemplifies the flourishing academic literature on globalization. RMIT University ' s Global Cities Institute represents a substantial institutional investment in interdisciplinary research into the social and environmental implications of globalization in which it leads the way internationally. Given these developments, the time is right for a book series that draws together diverse scholarship in global studies. This Handbook allows for extended treatment of critical issues that are of major interest to researchers and students in this emerging field. The topics covered speak to an interdisciplinary approach to the study of global issues that reaches well beyond the confines of international relations and political science to encompass sociology, anthropology, history, media and cultural studies,

economics and governance, environmental sustainability, international law and criminal justice. Specially commissioned chapters explore diverse subjects from a global vantage point and all deliberately cohere around core "global" concerns of narrative, praxis, space and place. This integrated approach sets the Handbook apart from its competitors and distinguishes Global Studies as the most equipped academic discipline with which to address the scope and pace of global change in the 21st century.

The Ages of the Avengers Routledge Context: The Effects of Environment on Product Design and Evaluation addresses the environment, or context, in which we consume products and the impact of context on choice and acceptability. The book explores what context is, how it influences design by specialists, and acceptance by consumers. Chapters discuss the basics of context, food and drink in context,

testing a range of other products, and other contextual variables. Historically, research on context has been done in the laboratory and various natural locations, but rapid growth in other methods to study context, including evoked contexts, immersive contexts, virtual reality contexts, and more have widened research possibilities. Appealing to the professional, academic and commercial markets, this book will be of interest to those who conduct research in product development and product testing, to those who study what controls product usage, including eating from the health perspective, and to those who make decisions about product and space development. Explores information on how context works and how to assess its influence on product decisions Discusses the basics of context, food and drink in context, and testing other products in context, including personal care

products and home and workspace design
Identifies variables that contribute to the
contextual experience

Previous Year Question 2010 to 2021 Book
with Answer Bloomsbury Publishing

The grouping consisting of Brazil, Russia, India and China (BRIC) was initially meant to be nothing more than clever investment jargon referring to the largest and most attractive emerging economies. However, these countries identified with the BRIC concept, and started to meet annually as a group in 2008. At their fourth summit in 2011, they added South Africa to become the BRICS. By then the BRICS had fully morphed from investment jargon to a name for a new economic and political grouping that had the

potential to challenge the unipolar hegemony of the United States and its Western allies. This work analyses the extent to which the concept of coexistence explains the individual foreign policies of the BRICS countries. The editors define coexistence as a strategy that promotes the establishment of a rule-based system for co-managing the global order. It recognizes that different states may legitimately pursue their own political and economic interests, but they have to do so within the bounds of a rule-based international system that ensures the peaceful coexistence of states. The BRICS and Coexistence addresses the political dimension of the emergence and influence of the BRICS in the international system and will be of interest to students and scholars of Politics, Development and International Relations.

Rethinking the Future of Europe Springer

Rethinking the Future of Europe has brought together three contrasting collections of contributions: the incrementalist perspective concerning the step by step development of Europe, the more radical reform/restructuring approach to the future of Europe, and a view of Europe from the outside.

Imposing Standards Utsaah Psychological Services Pvt. Ltd.

The word “ dissident ” is used in a broad sense. It includes scientists proposing not fully accepted ideas within the Relativity-Quantum Mechanics paradigm as well as opponents to some aspects of these theories.

The EU and Effective Multilateralism Oxford University Press

The monochrome - a single colour of paint

applied over the entirety of a canvas - remains one of the more contentious modernist artistic inventions. But whilst the manufacture of these 'pictures of nothing' was ostensibly straightforward, their subsequent theorisation has been anything but. More than a history, *Monochrome: Darkness and Light in Contemporary Art* is the first account of the monochrome's lively role in contemporary art. Liberated from the burden of representation, the monochrome first stood for emancipation: an ideological and artistic impulse that characterised the avant-garde of the early twentieth century. Historically, the monochrome embodied the most extreme form of abstraction and pure materiality. Yet more recently, adaptations of the art form have focused on a broader range of cultural and interpretive contexts. Provocative, innovative and timely, this book argues that the

latest artistic strategies go beyond stylistic concerns and instead seek to re-engage with ideas around authorship, process and the conditions of the visible as they are given and understood through both light and darkness. Discussing works by artists such as Katie Paterson, Hiroshi Sugimoto, Tom Friedman, Bruno Jakob, Sherrie Levine and Ceal Floyer, the book shows that the debates around an artwork's form and its possibility for meaning that the monochrome first engendered remain very much alive in contemporary visual culture.

Psychologists Magazine August 2021 issue OUP Oxford

The ideal of freedom is at the heart of our political and economic system. It is foundational to our sense of justice, our way of life, our conception of what it is to be human. But are we free in the way that we think we are? In *Creating Freedom*, Raoul Martinez brings together a torrent of mind-expanding ideas, facts, and arguments to dismantle sacred myths central to our

society—myths about free will, free markets, free media, and free elections. From the lottery of our birth to the consent-manufacturing influence of concentrated power, this far-reaching manifesto lifts the veil on the mechanisms of control that pervade our lives. It shows that the more we understand how the world shapes us, the more effectively we can shape the world. A highly original exploration of the most urgent questions of our time, *Creating Freedom* reveals that we are far less free than we like to think, but it also shows that freedom is something we can create together. In fact, our very survival may depend on our doing so.
