The Encyclopedia of Journal Entries Arden Shakespeare

Although each of the pieces included in this collection has been cited as an outstanding contribution to the literature on the subject, they are not available in most libraries. Each of them is a classic on the theory of double-entry bookkeeping. Of the nine articles reprinted in this volume originally published in 1984, those by Ladelle, Hotelling and Anton are recognized as being the classic articles on the depreciation of a single ‘machine’. Each of these articles was published in a journal that is often not accessible and reprinted here has brought them together in one place. For many years accountants have dealt with depreciation and capital maintenance as a static problem. This volume recognizes its dynamic aspects.

ELEMENTS OF ACCOUNTING BY RAYMOND W.

COLEMAN, . PREFACE

This book is designed for a short course in accounting at college level. Emphasis has been placed on the uses and interpretation of accounting data, but attention has also been given to the procedures

whereby these data are entered on the records. A general understanding of the methods of recording accounting values but not a proficiency in the mechanics of accounting is an essential background for the analysis of statements. A failure to understand the sources of these values often results in distorted impressions of their significance. The text, problems, and questions have been correlated to stress fundamental ideas in accounting. These ideas, if thoroughly understood, will assist the student to reason accurately with the economic facts of a business. An attempt has been made to treat the subject matter so that it will possess greater flexibility than does a more complete text not designed for the time limitations imposed by a short course. If necessary, certain chapters after Chap. VI may be omitted without seriously disturbing the continuity of the course. For example, if instruction is being given to a group interested in accounting because of its importance to investment analysis, it might be desirable to stress the text and problem material in Chaps. XIV and XV and to omit Chaps. VII, XII, and XIII. It is impossible to make specific acknowledgments of indebtedness to the numerous authors of textbooks and articles which have influenced the preparation of this book. I am especially indebted to Prof. W. A. Paton for his encouragement in the past and for the influence of his writings. RAYMOND W. COLEMAN. PITTSBURGH, PA., January, 1941

 FINANCIAL ACCOUNTING: THE IMPACT ON DECISION MAKERS, 10E makes it easy to demonstrate that accounting is a powerful tool for

business decision-making by going beyond debits and credits and keeping students focused on the big picture. For example, journal entries require students to demonstrate the balance sheet and income statement impact of transactions, helping students see how business events ultimately impact the financial statements. In addition to exposing students to annual reports of highly recognizable companies such as Nike, Porter's exclusive Ratio Decision-Model provides students with a framework for reading and interpreting financial statements to make decisions. The focus on financial statements and decision-making carries through to the end-of-chapter with a suite of case materials that have students reading and interpreting financial statements.
