Guide to Psychological Assessment with Asians Springer Science & Business Media
To effectively serve minority clients, clinicians require a double understanding: of both evidence-based practice and the cultures involved. This particularly holds true when working with Asian-Americans, a diverse and growing population. The Guide to Psychological Assessment with Asians synthesizes real-world challenges, empirical findings, clinical knowledge and common-sense advice to create a comprehensive framework for practice. This informed resource is geared toward evaluation of first-generation Asian Americans and recent immigrants across assessment methods (self-report measures, projective tests), settings (school, forensic) and classes of disorders (eating, substance, sexual). While the Guide details cross-cultural considerations for working with Chinese-, Japanese-, Korean and Indian-American clients, best practices are also included for assessing members of less populous groups without underestimating, overstating or stereotyping the role of ethnicity in the findings. In addition, contributors discuss diversity of presentation within groups and identify ways that language may present obstacles to accurate evaluation. Among the areas covered in this up-to-date reference: Structured and semi-structured clinical interviews. Assessment of acculturation, enculturation and culture. IQ testing. Personality disorders. Cognitive decline and dementia. Mood disorders and suicidality. Neuropsychological assessment of children, adolescents and adults. Culture-bound syndromes. Designed for practitioners new to working with Asian clients as well as those familiar with the population, the Guide to Psychological Assessment with Asians is exceedingly useful to neuropsychologists, clinical psychologists, health psychologists and clinical social workers.
Behavior and Classroom Management in the Multicultural Classroom Springer Publishing Company
In recent years the topic of acculturation has evolved from a relatively minor research area to one of the most researched subjects in the field of cross-cultural psychology. This edited handbook compiles and systemizes the current state of the art by exploring the broad international scope of acculturation. A collection of the world's leading experts in the field review the various contexts for acculturation, the central theories, the groups and individuals undergoing acculturation (immigrants, refugees, indigenous people, expatriates, students and tourists) and discuss how current knowledge can be applied to make both the process and its outcome more manageable and profitable. Building on the theoretical and methodological framework of cross-cultural psychology, the authors focus specifically on the issues that arise when people from one culture move to another culture and the reciprocal adjustments, tensions and benefits involved.

The Encyclopedia of Adolescence breaks new ground as an important central resource for the study of adolescence. Comprehensive in breath and textbook in depth, the Encyclopedia of Adolescence – with entries presented in easy-to-access A to Z format – serves as a reference repository of knowledge in the field as well as a frequently updated conduit of new knowledge long before such information trickles down from research to standard textbooks. By making full use of Springer's print and online flexibility, the Encyclopedia is at the forefront of efforts to advance the field by pushing and creating new boundaries and areas of study that further our understanding of adolescents and their place in society. Substantively, the Encyclopedia draws from four major areas of research relating to adolescence. The first broad area includes research relating to "Self, Identity and Development in Adolescence". This area covers research relating to identity, from early adolescence through emerging adulthood; basic aspects of development (e.g., biological, cognitive, social); and foundational developmental theories. In addition, this area focuses on various types of identity: gender, sexual, civic, moral, political, racial, spiritual, religious, and so forth. The second broad area centers on "Adolescents' Social and Personal Relationships". This area of research examines the nature and influence of a variety of important relationships, including family, peer, friends, sexual and romantic as well as significant nonparental adults. The third area examines "Adolescents in Social Institutions". This area of research centers on the influence and nature of important institutions that serve as the socializing contexts for adolescents. These major institutions include schools, religious groups, justice systems, medical fields, cultural contexts, media, legal systems, economic structures, and youth organizations. "Adolescent Mental Health" constitutes the last major area of research. This broad area of research focuses on the wide variety of human thoughts, actions, and behaviors relating to mental health, from psychopathology to thriving. Major topic examples include deviance, violence, crime, pathology (DSM), normalcy, risk, victimization, disabilities, flow, and positive youth development.

Resiliency in Native American and Immigrant Families NYU Press
Over the past century, educational psychologists and researchers have posited many theories to explain how individuals learn, i.e. how they acquire, organize and deploy knowledge and skills. The 20th century can be considered the century of psychology on learning and related fields of interest (such as motivation, cognition, metacognition etc.) and it is fascinating to see the various mainstreams of learning, remembered and forgotten over the 20th century and note that basic assumptions of early theories survived several paradigm shifts of psychology and epistemology. Beyond folk psychology and its naïve theories of learning, psychological learning theories can be grouped into some basic categories, such as behaviorist learning theories, connectionist learning theories, cognitive learning theories, constructivist learning theories, and social learning theories. Learning theories are not limited to psychology and related fields of interest but rather we can find the topic of learning in various disciplines, such as philosophy and epistemology, education, information science, biology, and – as a result of the emergence of computer technologies – especially also in the field of computer sciences and artificial intelligence. As a consequence, machine learning struck a chord in the 1980s and became an important field of the learning sciences in general. As the learning sciences became more specialized and complex, the various fields of interest were widely spread and separated from each other; as a consequence, even presently, there is no comprehensive overview of the sciences of learning or the central theoretical concepts and vocabulary on which researchers rely. The Encyclopedia of the Sciences of Learning provides an up-to-date, broad and authoritative coverage of the specific terms mostly used in the sciences of learning and its related fields, including relevant areas of instruction, pedagogy, cognitive sciences, and especially machine learning and knowledge engineering. This modern compendium will be an indispensable source of information for scientists, educators, engineers, and technical staff active in all fields of learning. More specifically, the Encyclopedia provides fast access to the most relevant theoretical terms provides up-to-date, broad and authoritative coverage of the most important theories within the various fields of the learning sciences and adjacent sciences and communication technologies; supplies clear and precise explanations of the theoretical terms, cross-references to related entries and up-to-date references to important research and publications. The Encyclopedia also contains biographical entries of individuals who have substantially contributed to the sciences of learning; the entries are written by a distinguished panel of

researchers in the various fields of the learning sciences.

The Handbook of Chicana/o Psychology and Mental Health Atlantic Publishers & Dist

This mixed methods study examined the influences of acculturation (e.g., assimilation and enculturation), marianismo, and ethnic identity on the sexual behaviors and attitudes of Latina adolescents. In the quantitative portion of the study, 204 Latina adolescents completed measures regarding acculturation, gender roles, ethnic identity, and sexual behaviors. In the qualitative portion of the study, three focus groups were conducted (with a total of 10 participants) in which Latina youth were asked questions regarding their ethnic group membership and its influence on their attitudes about sex. The results of the quantitative portion of the study revealed that ethnic affirmation was negatively associated with the variable "ever had sex." Ethnic affirmation was positively associated with contraception use at first sexual intercourse and ethnic identity achievement was positively associated with age of first sexual intercourse. Additionally, there was a significant interaction between ethnic affirmation and assimilation for age at first sexual intercourse, such that participants who reported high levels of assimilation and low levels of ethnic affirmation reported a younger age of first sexual intercourse than those who reported a high level of assimilation and a high level of ethnic affirmation. The qualitative results revealed that the participants live in a cultural context characterized by ethnic pride and biculturalism. Experiences of discrimination, awareness of negative stereotypes, and bicultural difficulties are also important aspects of the cultural context of the Latina youth. The cultural context of these adolescents helped to shape their sexual attitudes. The core sexual attitude expressed by the majority of the Latina youth was that marriage is a necessary condition for them to engage in sexual activity. The qualitative results also revealed how gender roles, cultural differences, family values, personal knowledge, peer pressure, and stressors/abuse shape the core sexual attitude of the Latina adolescents. Specifically gender roles, cultural differences, family values, and personal knowledge discouraged them from engaging in sexual activity, while peer pressure and stressors/abuse encouraged them to engage in sexual activity. Convergence and divergence between the qualitative and quantitative data are identified and explained. Limitations and implications of the current study and future directions are also discussed.

Mexican-Americans now constitute two thirds of what has become the largest and fastest-growing minority group in the United States, Hispanics. They have distinct cultural patterns and values that those who seek to serve them competently as clinicians and educators, and those who attempt to study them, need to understand. This is the first comprehensive overview of the psychology of the Chicana/o experience since 1984. Solidly grounded in the latest theory and research, much of which is relevant to other Latina/o groups as well, *The Handbook of Chicana/o Psychology and Mental Health* is an indispensable source of up-to-date information and guidance for mental health and education professionals, their trainees and students; and for social and behavioral scientists interested in the impact of cultural differences in multicultural settings.

Diversity, Oppression, & Change Grove Press

Although the United States has always been a nation of immigrants, the recent demographic shifts resulting in burgeoning young Latino and Asian populations have literally changed the face of the nation. This wave of massive immigration has led to a nationwide struggle with the need to become bicultural, a difficult and sometimes painful process of navigating between ethnic cultures. While some Latino adolescents become alienated and turn to antisocial behavior and substance use, others go on to excel in school, have successful careers, and build healthy families. Drawing on both quantitative and qualitative data ranging from surveys to extensive interviews with immigrant families, *Becoming Bicultural* explores the individual psychology, family dynamics, and societal messages behind bicultural development and sheds light on the factors that lead to positive or negative consequences for immigrant youth. Paul R. Smokowski and Martica Bacallao illuminate how immigrant families, and American communities in general, become bicultural and use their bicultural skills to succeed in their new surroundings. The volume concludes by offering a model for intervention with immigrant teens and their families which enhances their bicultural skills.

Domestic violence against women is an oppressive condition that extends across race, class, and gender. This work examines intimate partner violence against women in Memphis, Tennessee, focusing on Mexican immigrant and Mexican American female survivors of domestic violence. Author M. Helena Vanderlei Collins interviewed ten Mexican immigrant women and seven Mexican American women to investigate factors that influence helpseeking behavior. Collins focused on the perceptions of Mexican immigrant and Mexican American women regarding the social services available to them and explored how their help-seeking behavior is affected by their degree of acculturation and the incidence of intimate partner violence. Collins employed a combination of quantitative and qualitative methods to answer seven key research questions. The quantitative instruments included ARSMA-II, the Inventory of Abusive Behavior, and a customized demographic questionnaire. The qualitative data was drawn from the semi-structured interviews with the domestic violence survivors. Collins concluded her study by describing the challenges women of Hispanic origin face when seeking help from social service providers and by offering recommendations on how to improve the quality of services these women receive.

Becoming Intercultural Oxford University Press

A comprehensive, readable introduction to the cultural dimensions of counseling and psychotherapy is now available. National leaders in each topic have been selected to provide an accessible, yet thorough, presentation of culturally alert counseling. An introduction to the nature of counseling and culture begins the book, followed by chapters on Social Inequality, Race, and Ethnicity. The succeeding chapters reveal the characteristics, histories, mental health issues, and appropriate counseling strategies for each of eleven cultural groupings. The book ends with a thorough presentation of actual culturally alert counseling practice. Seven dimensions combine to make the book unique, namely thoroughness, inclusiveness, theoretical foundations, practicality, readability, activity, and modeling. In the first case, this book broadens the discussion of culture from ethnicity and race to include social class, religion, gender, and sexual orientation. Of particular note, in the area of ethnicity, all five of the major U.S. pan-ethnic groupings are presented, as well as Middle Eastern and South Asian people. The book is also inclusive of all people, including both those in dominant and non-dominant cultural groups. The assumption is that everyone has culture. Culturally alert counseling is also theoretically grounded in the first few chapters of the book, which lay out a guiding developmental vision of culturally alert counseling. Further conceptual foundations are laid in discussions of social inequality, social justice, social diversity, and critical consciousness. The practical dimension of the book is underscored by the inclusion of a chapter devoted to actual culturally alert counseling skills, an area that is needed by practitioners in this important work. Readability and interest are enhanced by the interweaving of case vignettes and experiential activities throughout the book. Finally, culturally alert counseling skills are modeled in an accessible, vital demonstration video that accompanies the book. Ultimately, readers will leave informed, moved, and changed by the encounters with culture that lie in these pages. They will also be ready to begin practice equipped with both a vision of the work and practical skills in implementing it.

Understanding the USA Westview Press

Here is the first comprehensive cross-disciplinary work to examine the current health situation of our immigrants, successfully integrating the vast literature of diverse fields -- epidemiology, health services research, anthropology, law, medicine, social work, health promotion, and bioethics -- to explore the richness and diversity of the immigrant population from a culturally-sensitive perspective. This unequalled resource examines methodological issues, issues in clinical care and research, health and disease in specific immigrant populations, patterns of specific diseases in immigrant groups in the US, and conclusive insight towards the future. Complete with 73 illustrations, this singular book is the blueprint for where we must go in the future.
