With the emergence of urban and community forestry as the fastest growing part of our profession in the last 15 years, the need for a book such as this inevitably developed. The Society of American Foresters' urban forestry working group counts 32 or more universities now offering courses in this subject, and the number is growing. For the last several years I have coordinated a continuing education urban forestry course at Rutgers for nonmatriculated students. Registrants have included arborists, shade tree commissioners, landscape architects, city foresters, environmental commissioners, park superintendents, and others whose jobs involve care and management of trees. The

course was started by Bob Tate in 1980, around a core of managerial subjects such as inventories, budgets, and public relations. After Bob left in 1984 to join Asplundh and later to start his own prosperous business in California, the course languished after it exhausted the local market for those subjects.

During the last 30 years, Advanced Architecture has consolidated an interactive and informational logic that differs from that of Modernity and Postmodernity. This logic is threefold; it is modulated through three coexisting protocols -modes of action- whose peaks of intensity occur in three different decades: Conformative Protocols (1990-2000), Distributive Protocols (2000-2010) and Expansive Protocols (2010-2020). This work proposes a threefold cultural narrative whose interactive and informational logic differs from that of modernity and postmodernity. It positions three different ethos by critically approaching the architectural side of a cultural mutation that has been affecting the Western experimental areas of knowledge and practice since the end of the last century. A transformative process constituted by a constellation of transdisciplinary manifestations, accelerations, turns, shortcuts and clusterizations that by no means can be read under one single epistemological umbrella. In this

sense, rather than approaching the practice of architecture focusing on its disciplinary inner specificity, this book approaches the research of experimental architecture focusing on its extra-disciplinary entanglements. It argues that a vast multiplicity of fields of knowledge participates in a cultural endeavour modulated through three protocols -forms of action- that singularize three decades: Conformative Protocols (1990-2000), Distributive Protocols (2000-2010) and Expansive Protocols (2010-2020). These three periods shouldn't be read as three hermetic and concatenated monades, but as three different modulations of the same narrative, that is, as three overlapping and coexisting systems whose peaks of intensity occur in three different decades. However, the main purpose of this book is not limited to unveiling the ethos of these three conjugations. It also aims at using this framework as a "time-field", a narrative map that moves from the classificatory to the cartographical in order to vectorize the last 30 years of experimental architecture. In this sense, this book argues that this threefold set of protocols represents the progressive attempt to constitute critical interiorities "looking for" and "produced through" interactions that are increasingly more intimate and whose agents are increasingly more diverse. A tendency oriented towards the consolidation of an "intimacy between strangers" that

highly resonates with the cultural and technological landscape in which experimental architecture operates.
