This book reports on the state of the art in physical ergonomics and addresses the design of products, processes, services, and work systems to ensure they are productive, safe, and enjoyable for people to use. The human bodys responses to physical and physiological work demands, strain injuries from repetition, vibration, force, and posture are the most common types of issues examined, along with their design implications. The book explores a wide range of topics in physical ergonomics, including the consequences of repetitive motion, materials handling, workplace safety, the usability of portable devices, design, working postures, and the work environment. Mastering physical ergonomics and safety engineering concepts is fundamental to creating products and systems that people can safely and conveniently use, as well as avoiding stresses and minimizing the risk of accidents. Based on the AHFE 2019 Conference on Physical Ergonomics and Human Factors, held on July 24-28, 2019, in Washington D.C., USA, this book provides readers with a comprehensive perspective on the current challenges in physical ergonomics, which is a critical aspect in the design of any human-centered technological system, and for factors influencing human performance.

The claim that multilanguage acquisition drives advantages in ' executive function ' is currently an issue of vigorous debate in academic literature. Critics argue that evidence for this advantage has been confounded by unsound or questionable methodological practices, with some investigators abandoning research in this area altogether, indicating either that there is no bilingual advantage or that it is impossible to capture and therefore rule out alternative explanations for group differences. Over the past decade, and against this backdrop, theory has developed from a relatively narrow focus on inhibitory control to incorporate theory of mind, rule-based learning, reactive and proactive control, visuo-spatial memory, and control of verbal interference in speech comprehension. Most recently, authors have claimed that the process of becoming bilingual may also impact on metacognitive abilities. The fundamental issue is whether the limited capacity and goal-directed selectivity of our executive system can somehow be enhanced or otherwise profit from the continuous, intense competition associated with communicating in multilingual environments. However, although this issue has received much attention in academic literature, the question of which cognitive mechanisms are most influenced by the enhanced competition associated with multilingual contexts remains unresolved. Therefore, rather than dismissing this important topic, we advocate a more systematic approach in which the effects of multilinguistic experience are assessed and interpreted across well-defined stages of cognitive development. We encourage a broad, developmentally informed approach to plotting the trajectory of interactions between multi-language learning and cognitive development, using a convergence of neuroimaging and behavioral methods, across the whole lifespan. Moreover, we suggest that the current theoretical framing of the bilingual advantage is simplistic, and this issue may limit attempts to identify specific mechanisms most likely to be modulated by multilingual experience. For example, there is a tendency in academic literature to treat ' executive function ' as an essentially unitary fronto-parietal system recruited in response to all manner of cognitive demand, yet performance across so called ' executive function ' tasks is highly variable and intercorrelations are sometimes low. It may be the case that some ' higher level ' mechanisms of 'executive function' remain relatively unaffected, while others are more sensitive to multilingual experience – and that there may be disadvantages as well as advantages, which

themselves may be sensitive to factors such as age. In our view, there is an urgent need to take a more fine-grained approach to this issue, so that the strength and direction of changes in diverse cognitive abilities associated with multilanguage acquisition can be better understood. This book compiles work from psychologists and neuroscientists who actively research whether, how, and the extent to which multilanguage acquisition promotes enhanced cognition or protects against age-related cognitive or neurological deterioration. We hope this collection encourages future efforts to drive theoretical progress well beyond the highly simplistic issue of whether the bilingual cognitive advantage is real or spurious.

This issue of AD explores the remarkable resurgence of ecological strategies in architectural imagination. As a symptom of a new sociopolitical reality inundated with environmental catastrophes, sudden climatic changes, garbage-packed metropolises and para-economies of non-recyclable e-waste, environmental consciousness and the image of the earth re-emerges, after the 1960s, as an inevitable cultural armature for architects; now faced with the urgency to heal an ill-managed planet that is headed towards evolutionary bankruptcy. At present though, in a world that has suffered severe loss of resources, the new wave of ecological architecture is not solely directed to the ethics of the world's salvation, yet rather upraises as a psycho-spatial or mental position, fuelling a reality of change, motion and action. Coined as 'EcoRedux', this position differs from utopia in that it does not explicitly seek to be right; it recognises pollution and waste as generative potentials for design. In this sense, projects that may appear at first sight as science-fictional are not part of a foreign sphere, unassociated with the real, but an extrusion of our own realms and operations. Contributors include: Matthias Hollwich and Marc Kushner (HWKN), Fabiola López-Durán and Nikki Moore, Anthony Vidler and Mark Wigley. Featured architects: Anna Pla Catalá, Jonathan Enns, Eva Franch-Gilbert. Mitchell Joachim (Terreform One), François Roche (R&Sie(n)), Rafi Segal, Alexandros Tsamis and Eric Vergne.

CBD has insinuated itself into every aspect of our lives, from body oil to pet food. The cannabis derivative cannabidiol is an omnipresent cure-all that has gone from being “vogueish” to “a mainstream panacea,” as The New York Times recently noted. And it’s a particular favorite of the crowd endemic to Brooklyn, the Bay Area and other similar urban environs. Now comes Amy Sohn’s parodic parable CBD!, written in the style of the beloved children’s book by William Steig, CDB! A unique work of humor and a puzzle book, it is packed with charming black-and-white illustrations by Eric Hanson—and for those of us who need it, there’s a solution key in the back. Though not appropriate for kids (except for really smart and transgressive ones), CBD! will delight CBD users, irreverent parents, ex-children, and anyone curious about or appalled by the wellness industry. Amy Sohn is the bestselling author of the novels Prospect Park West, Motherland, My Old Man, Run Catch Kiss, and The Actress, all published by Simon & Schuster. Her books have been published in eleven languages. Her wildly popular columns have run in New York Press, the New York Post, Grazia (UK), and New York. She has also written for The Awl, Harper’s Bazaar, Men’s Journal, Playboy, Elle, The New York Times, and many other publications. She has written pilots and shows for ABC, Fox, Lifetime, HBO, and Oxygen.
