Volume II of The Official History of the UK Strategic Nuclear Deterrent provides an authoritative and in-depth examination of the British government's strategic nuclear policy from 1964 to 1970. Written with full access to the UK documentary record, Volume II examines the controversies that developed over nuclear policy following the arrival in office of a Labour government led by Harold Wilson in October 1964 that openly questioned the independence of the deterrent. Having decided to preserve the Polaris programme, Labour ministers were nevertheless committed not to develop another generation of nuclear weapons beyond those in the pipeline, placing major doubts over the long-term future of the nuclear programme and collaboration with the United States. Defence planners also became increasingly concerned that the deployment of Soviet anti-ballistic missile (ABM) defences around Moscow threatened to undermine the ability of Polaris to fulfil its role as a national strategic nuclear deterrent. During 1967, under heavy pressures to control defence spending, a protracted debate was conducted within Whitehall over the future of Polaris and how to respond to the evolving ABM challenge. The volume concludes with Labour's defeat at the general election of June 1970, by which time the Royal Navy had assumed the nuclear deterrent role from the RAF, and plans had already been formulated for a UK project to improve Polaris which could both ensure its continuing credibility and rejuvenate the Anglo-American nuclear relationship. This book will be of much interest to students of British politics, Cold War history, nuclear proliferation and international relations.

The Great University Gamble Springer

In 2010 the UK government proposed huge cuts and market-driven reforms for Universities. The proposals provoked widespread opposition in the form of street protests, occupations, and online campaigns. As the dust settles, Andrew McGettigan surveys the emerging brave new world of Higher Education. Displaying a stunning grasp of the policy details, he looks at the long term impact of the changes, which have been obscured by the focus on tuition fee increases. What will be the role of universities within society? How will they be funded? What kind of experiences will they offer students? Written in a clear and engaging style, The Great University Gamble outlines the architecture of the new policy regime, which many find difficult to grasp. It is an urgent warning that our Universities are being transformed from institutions of real learning to profit-driven degree factories.

High Integrity Software Wim Bervoets Health promotion has traditionally focused on illness prevention, targeting the fit and well. But what about those who live with life-threatening or terminal illness? Health -Promoting Palliative Care proposes a model of care that goes beyond simply providing care in the final stages of life and draws on critical

and participatory principles from both palliative care and health promotion. Emphasising early intervention and a social approach to the problems and experiences of dying, it encourages service providers, family members, and the dying themselves to seek ways to promote emotional, social, and spiritual well-being, as well as physical health. The book begins by looking at the ways in which health promotion can be introduced to palliative care. It goes on to outline the goals and practice principles of a health promoting palliative care. Later chapters address practice strategies relevant to health and death education, social supports, interpersonal reorientation, and environmental and policy development. Health Promoting Palliative Care is a valuable, practical, and accessible resource for practitioners working alone or in health care institutions, for students of the health sciences, social work, or pastoral care, and for those working in policy areas.

The Real and Virtual Worlds of Spatial Planning brings together contributions from leaders in landscape, transportation, and urban planning today. The authors present an international range of case studies - from Europe, Australia, North America, Asia and Africa - that ground the exploration of ideas in the realities of sustainable urban and regional planning, landscape planning and present the prospects for using virtual worlds for modeling spatial environments and their application in planning. The first part of this volume explores the challenges for planning in the real world that are caused by the dynamics of socio-spatial systems as well as by the contradictions of their evolutionary trends related to their spatial layout. Case studies from developed as well as developing countries are presented. The second part presents diverse concepts to model, analyze, visualize, monitor and control socio-spatial systems by using virtual worlds. Theoretical topics include modeling spatial systems as Petri nets, cellular automata as well as dynamical systems.
