In June 2019, the Committee on the Judiciary initiated a bipartisan investigation into the state of competition online, spearheaded by the Subcommittee on Antitrust, Commercial and Administrative Law. As part of a top-to-bottom review of the market, the Subcommittee examined the dominance of Amazon, Apple, Facebook, and Google, and their business practices to determine how their power affects our economy and our democracy. Additionally, the Subcommittee performed a review of existing antitrust laws, competition policies, and current enforcement levels to assess whether they are adequate to address market power and anticompetitive conduct in digital markets. Over the course of our investigation, we collected extensive evidence from these companies as well as from third parties—totaling

nearly 1.3 million documents. We held seven hearings to review the effects of market power online—including on the free and diverse press, innovation, and privacy—and a final hearing to examine potential solutions to concerns identified during the investigation and to inform this Report's recommendations. A year after initiating the investigation, we received testimony from the Chief Executive Officers of the investigated companies: Jeff Bezos, Tim Cook, Mark Zuckerberg, and Sundar Pichai. For nearly six hours, we pressed for answers about their business practices, including about evidence concerning the extent to which they have exploited, entrenched, and expanded their power over digital markets in anticompetitive and abusive ways. Their answers were often evasive and non-responsive, raising fresh questions about whether they believe they are

beyond the reach of democratic oversight. Although these four corporations differ in important ways, studying their business practices has revealed common problems

The Design of Future Educational Interfaces provides a new multidisciplinary synthesis of educational interface research. It explains how computer interfaces can be redesigned to better support our ability to produce ideas, think, and solve problems successfully in national priority areas such as science and mathematics. Based on first-hand research experience, the author offers a candid analysis of emerging technologies and their impact, highlighting communication interfaces that stimulate thought. The research results will surprise

readers and challenge their assumptions about existing technology and its ability to support our performance. In spite of a rapid explosion of interest in educational technologies, there remains a poor understanding of what constitutes an effective educational interface for student cognition and learning. This book provides valuable insights into why recent large-scale evaluations of existing educational technologies have frequently not shown demonstrable improvements in student performance. The research presented here is grounded in cognitive science and experimental psychology, linguistic science and communications, cross-cultural cognition and language, computer science and human interface design, and the

learning sciences and educational technology.
