This book examines the visual-sexual turn in social media discourses in the field of online activism with a particular focus on the extraordinary protest years of 2018 – 2020. Presenting a socially engaged theory of "tit-for-tat media" and including case-studies on activist movements such as the Euro-American alt-right, the pro-democracy movement in Hong Kong, and revolutionary artists in China, this study reveals how visual cultures, including gendered or sexualized imagery, are utilized to influence public perception. By presenting in-depth explorations of online ethnography, interviews with activists and

studies of the political histories and urban protests-environments, the volume uncovers how local artists, netizens and citizens are using media and digital imagery in contemporary activism. Covering a broad spectrum of social media content, from hyper-cute manga and cartoons to satirical pornography and sexualized hate-speech, it will be of huge interest to students and scholars of media and communication studies, political communication, sexuality and gender studies.

In 2011, Janet Devlin wowed X-Factor judges and charmed the nation with her unique vocals and performances. She consistently received the highest consecutive public vote out of all the contestants and gained a place on the live arena tour. But rather than this steering her towards greater musical success, Janet faced numerous challenges which almost cost her her career... "Believe it or not, you're holding my life in your hands. Not the picture-perfect version we've all become accustomed to, thanks to social media. This is my life as I've lived it - no filters. Each chapter in this book unlocks the truth behind a song from my album Confessional. They span ten years of intense self-discovery married with a lot of self-sabotage. My broken brain has taken me to dark places both in my own head and in the real world. But, with destruction comes creation. I genuinely hope that My Confessional does not personally resonate with you and that you've not been to the same Hell that I've come to call Home, but if you have let my life be proof that it all works out in the end. I see now that the world is truly what we make of it and that everything happens for a reason. Or, at least, that's what I tell myself. Here I confess of the sins I want so much to be free from and to finally forgive myself for what I've done. I confess. Janet Devlin"

The line began forming after eight
o'clock. Sal, short and heavy-set,
kept everyone busy. Neat, in a
white shirt and sports jacket, with
his grey fedora cocked to the side,
his crooked grin made you smile.
Without warning the heavy door
would swing open and the waiters
would come outside to join him.
They were dressed in pajamas or
prison garb, with hats and horns,
and were there to warm up the
crowd. Some in line expected this,
others were shocked. The pink
polka dot building should have been
a warning. Complete strangers in
line became chummy, exchanging
stories they had heard; toilet seat
covers to serve drinks on,

microphones in the ladies room, toilet paper for napkins. Most had brought their friends there to be roasted. The line of people varied in age. They all dressed casually because they'd heard you could get a pie in the face or a squirt in the eye. The club's routines were blue in color, but harmless. If you were lucky you might see a "Balls for the Queen" or a "Singing beer." The price was always right for a good time and Warm Beer and Lousy Food was the place to be.

An overview of recent efforts in the machine learning community to deal with dataset and covariate shift, which occurs when test and training inputs and outputs have different distributions. Dataset shift is a common problem in predictive modeling that occurs when the joint distribution of inputs and outputs differs between training and test stages. Covariate shift, a particular case of dataset shift, occurs when only the input distribution changes. Dataset shift is present in most practical applications, for reasons ranging from the bias introduced by experimental design to the irreproducibility of the testing conditions at training time. (An example is -email spam filtering, which may fail to recognize spam that differs in form from the spam the automatic filter has been built on.) Despite this, and despite the attention given to the apparently similar problems of semi-supervised learning and active learning, dataset

shift has received relatively little attention in the machine learning community until recently. This volume offers an overview of current efforts to deal with dataset and covariate shift. The chapters offer a mathematical and philosophical introduction to the problem, place dataset shift in relationship to transfer learning, transduction, local learning, active learning, and semi-supervised learning, provide theoretical views of dataset and covariate shift (including decision theoretic and Bayesian perspectives), and present algorithms for covariate shift.
