With contributions from leading brand experts around the world, this valuable resource delineates the case for brands (financial value, social value, etc.) and looks at what makes certain brands great. It covers best practices in branding and also looks at the future of brands in the age of globalization. Although the balance sheet may not even put a value on it, a company's brand or its portfolio of brands is its most valuable asset. For well-known companies it has been calculated that the brand can account for as much as 80 percent of their market value. This book argues that because of this and because of the power of not-for-profit brands like the Red Cross or Oxfam, all organisations should make the brand their central organising principle, guiding every decision and every action. As well as making the case for brands and examining the argument of the anti-globalisation movement that brands are bullies which do harm, this second edition of Brands and Branding provides an expert review of best practice in branding, covering everything from brand positioning to brand protection, visual and verbal identity and brand communications. Lastly, the third part of the book looks at trends in branding, branding in Asia, especially in China and India, brands in a digital world and the future for brands. Written by 19 experts in the field, Brands and Branding sets out to provide a better understanding of the role and importance of brands, as well as a wealth of insights into how one builds and sustains a successful brand.

Despite the Australian Constitution implying school education to be a state responsibility, the Commonwealth has increasingly interfered with state school education. The Australian Government Muscling in on School Education therefore offers a historical account of this government involvement in Australian education, from federation to the present day, providing a much-needed, fully updated and relevant overview the topic. Arguing that education has become an arena for competing political forces, this book examines the powerful influence of the Commonwealth over education and the political motives behind it, exploring how politics influences aspects of the curriculum, teaching standards, assessment and reporting, funding, teacher selection and policy more broadly. Ultimately questioning whether this influence is in the interests of the members of the community who depend on education, the book holds government engagement in education to account. Taking the major epochs of federalism as an organizing framework, the book's chapters include explorations of: The efficiency dynamic and the progressive years (1919–39) Postwar imperatives and the Menzies years (1949–72) Coordinative federalism and treading softly: the Whitlam years (1972–5) and Fraser years (1975–83) Corporate federalism: the Hawke/Keating years (1983–96) Supply-side federalism and globalization: the Howard years (1996–2007) National control and the Rudd, Gillard, Abbott, Turnbull and Morrison years (2007–15) A thorough and significant examination of the historical engagement of the Australian government in education, this book is essential reading for student teachers and postgraduate students in education studies and politics.

[Why Recognition Matters](#) Chilton Book Company

This book deals with the relevance of recognition and validation of non-formal and informal learning education and training, the workplace and society. In an increasing number of countries, it is at the top of the policy and research agenda ranking among the possible ways to redress the glaring lack of relevant academic and vocational qualifications and to promote the development of competences and certification procedures which recognise different types of learning, including formal, non-formal and informal learning. The aim of the book is therefore to present and share experience, expertise and lessons in such a way that enables its effective and immediate use across the full spectrum of country contexts, whether in the developing or developed world. It examines the importance of meeting institutional and political requirements that give genuine value to the recognition of non-formal and informal learning; it shows why recognition is important and clarifies its usefulness and the role it serves in education, working life and voluntary work; it emphasises the importance of the coordination, interests, motivations, trust and acceptance by all stakeholders. The volume is also premised on an understanding of a learning society, in which all social and cultural groups, irrespective of gender, race, social class, ethnicity, mental health difficulties are entitled to quality learning throughout their lives. Overall the thrust is to see the importance of recognising non-formal and informal learning as part of the larger movement for re-directing education and training for change. This change is one that builds on an equitable society and economy and on sustainable development principles and values such as respect for others, respect for difference and diversity, exploration and dialogue.
