This open access book describes the
serious threat of invasive species to
native ecosystems. Invasive species
have caused and will continue to cause
enormous ecological and economic
damage with ever increasing world
trade. This multi-disciplinary book,

written by over 100 national experts, presents the latest research on a wide range of natural science and social science fields that explore the ecology, impacts, and practical tools for management of invasive species. It covers species of all taxonomic groups from insects and pathogens, to plants, vertebrates, and aquatic organisms that impact a diversity of habitats in forests, rangelands and grasslands of the United States. It is well-illustrated, provides summaries of the most important invasive species and issues impacting all regions of the country, and includes a comprehensive primary reference list for each topic. This scientific synthesis provides the cultural, economic,

scientific and social context for addressing environmental challenges posed by invasive species and will be a valuable resource for scholars, policy makers, natural resource managers and practitioners.

Advances in Ecological Research was first published in 1962 and has become one of Academic Press' most prestigious and successful series. In 1999 the Institute for Scientific Information released figures indicating this serial has an impact factor of 9.6 and a half-life of 10.0 years, ranking it first in the highly competitive category of Ecology. This volume continues to publish topical and important reviews, and

interprets ecology to include all material that contributes to our understanding of the field. *Advances in Ecological Research* presents a wide range of papers on all aspects of ecology. Topics include the physiology, populations, and communities of plants and animals, as well as landscape and ecosystem ecology

A Practical Handbook for Colleges, Universities and the Scholarship of Teaching John Catt Educational This book addresses the difficult decisions in the life of law students, graduates and young law professionals in deciding the area of legal practice to pursue as a career. The number of legal fields and subfields is over one hundred, making it virtually impossible for an upcoming lawyer to explore all of these career avenues. Many students finish law school with little understanding of what specific law careers involve, for example, or what sports or space lawyers routinely do. This book highlights the time-

consuming nature of law education and training that causes a lack of experience in legal fields as being able to successfully determine the right legal profession for the student. Finding a law career that is a significant source of satisfaction is a function of serious thinking and active research, which the current university to legal practice does not facilitate. This book is a practical guide for any student or current lawyer who is deciding and evaluating their future legal profession.

This groundbreaking, comprehensive new text explores major issues in education today through international and intercultural research. Contributors draw on comparative research from the Americas, Africa, Asia, Europe, and the Middle East and touch upon such themes as the history and philosophy of comparative

education, the right to education, teacher formation, alternative pedagogies, gender, international assessments, Indigenous knowledge, peace building, and global citizenship. The text features a vivid portrayal of global educational practices, contributions from preeminent scholars, and invaluable teaching resources. This is vital reading for teachers, teachers-in-training, and comparative education scholars. A Commitment to Growth Bright Minds Publishing

Experience - it is our first teacher in life, our early warning system, and our guide to world discovery. Experience connects the inner self to the outer world. It shapes our thoughts, informs our attitudes, motivates our actions. It is the most common mode of learning for all of humanity. Yet, hidden in plain sight,

experiential learning is largely taken for granted by educators and researchers. We assume that experience is largely educational. We simply 'learn by doing' - don't we? There is a world of difference between 'doing' and 'doing intelligently'. By understanding how experience acts as a mechanism to inspire and scaffold memorable learning, we stand to gain greater control over this most powerful and universal force in human development. Learning, empowered by experience, is life-changing for learners; experience, purposefully harnessed, is transformational for schools.

True or false? In selling high-value products or services: 'closing' increases your chance of success; it is essential to describe the benefits of your product or service to the customer; objection handling is an important skill; open questions are more effective than closed questions. All false, says this provocative book. Neil Rackham and his team studied more than 35,000 sales calls made by 10,000 sales people in 23 countries over 12 years. Their findings revealed

that many of the methods developed for selling low-value goods just don't work for major sales. Rackham went on to introduce his SPIN-Selling method. SPIN describes the whole selling process: Situation questions Problem questions Implication questions Need-payoff questions SPIN-Selling provides you with a set of simple and practical techniques which have been tried in many of today's leading companies with dramatic improvements to their sales performance.

Issues for Teachers Acer Press

Online education has become a major component of higher education worldwide. In mathematics and statistics

courses, there exists a number of challenges that are unique to the teaching and learning of mathematics and statistics in an online environment. These challenges are deeply connected to already existing difficulties related to math anxiety, conceptual understanding of mathematical ideas, communicating mathematically, and the appropriate use of technology. Teaching and Learning Mathematics Online bridges these issues by presenting meaningful and practical solutions for teaching mathematics and statistics online. It focuses on the problems observed by mathematics instructors currently working in the field who strive to hone their craft and share best practices with our professional community. The book provides a set of standard practices, improving the quality of online teaching and the learning of mathematics. Instructors will benefit from learning new techniques and approaches to delivering content. Features Based on the experiences of working educators in the field

The purpose of this instructional packet is to inform teachers and parents about children's development of numeracy in the early years of schooling. "I Can Do Maths" questions are in a child-friendly format and require children to write, draw, count, and measure. Two "ezi-guides" are provided to make administration easier. Keeping track of the results of assessment can be time-consuming. To minimize this, the Individual Student Profile, Diagnostic Map, and Descriptive Report are provided to assist teachers. All of these provide descriptive and normative reports of children's performance in number, measurement, and space, not simply a score, so that planning a teaching program appropriate to an individual child's needs is made easier. Explore reinforcement learning (RL) techniques to build cutting-edge games using Python libraries such as PyTorch, OpenAI Gym, and TensorFlow Key Features Get to grips with the different reinforcement and DRL algorithms for game development Learn how to implement components such as artificial agents, map and level generation, and audio generation Gain insights into cutting-edge RL research and

understand how it is similar to artificial general research Book Description With the increased presence of AI in the gaming industry, developers are challenged to create highly responsive and adaptive games by integrating artificial intelligence into their projects. This book is your guide to learning how various reinforcement learning techniques and algorithms play an important role in game development with Python. Starting with the basics, this book will help you build a strong foundation in reinforcement learning for game

development. Each chapter will assist you in implementing different reinforcement learning techniques, such as Markov decision processes (MDPs), Q-learning, actor-critic methods, SARSA, and deterministic policy gradient algorithms, to build logical self-learning agents. Learning these techniques will enhance your game development skills and add a variety of features to improve your game agent's productivity. As you advance, you'll understand how deep reinforcement learning (DRL) techniques can be used to devise strategies to help agents learn from their actions and build engaging games. By the end of this book, you'll be ready to apply reinforcement learning techniques to build a variety of projects and contribute to open source applications. What you will learn

Understand how deep learning can be integrated into an RL agent
Explore basic to advanced algorithms commonly used in game development
Build agents that can learn and solve problems in all types of environments
Train a Deep Q-Network (DQN) agent to solve the CartPole balancing problem
Develop game AI agents by understanding the mechanism behind complex AI
Integrate all

the concepts learned into new projects or gaming agents Who this book is for If you're a game developer looking to implement AI techniques to build next-generation games from scratch, this book is for you. Machine learning and deep learning practitioners, and RL researchers who want to understand how to use self-learning agents in the game domain will also find this book useful. Knowledge of game development and Python programming experience are required.
