"Staff from smaller airports typically lack specialized expertise in the negotiation and development of airport property or the resources to hire consultants. ACRP Research Report 213 provides airport management, policymakers, and staff a resource for developing and leasing airport land and improvements, methodologies for determining market value and appropriate rents, and best practices for negotiating and re-evaluating current lease agreements. There are many factors that can go into the analysis, and this report reviews best practices in property development."--Foreword.

The author traces with compelling detail the evolution of the Russian state, where the Tsar claimed to own the land and its inhabitants as if they were his own personal property. Professor Pipes analyzes the political behavior of Russia's peasantry, nobility and bourgeoisie as well as its clergy, showing why none of them could limit the absolute power of the state. He discusses how the intelligentsia challenged the Tsars' power, leading to increased repression and Russia's development as a bureaucratic police state. This sweeping epic brings Russia's turbulent history to life and helps us better understand the roots of modern Russia.

This book critically examines the case for and against the belief in personal survival of bodily death. It discusses key philosophical questions. How could a discarnate individual be identified as a person who was once alive? What is the relationship between minds and their brains? Is a 'next world' conceivable? The book also examines classic arguments for the immortality of the soul, and focuses on types of prima facie evidence of survival: near-death experiences, apparitions, mediumistic communications, and ostensible reincarnation cases.

An officer in the original Navy SEALs, an Olympian, a national champion, the first swim coach at the University of Texas, and the founder of the nation's biggest summer camp, Tex Robertson was a rare individual who pushed the bounds of what one man can accomplish in a lifetime. From his creation of the now-ubiquitous flip turn technique as a swimmer at Michigan to his numerous inventions at Camp Longhorn (including the Frisbee), the effects are still felt today from the life of a man who grew up in frontier West Texas and became, by sheer force of will, an influential figure in state history. To have a major impact in just one area of expertise would be impressive in itself, but Tex Robertson impacted swimming, the U.S. military, wildlife conservation, coaching, youth camping, and - through his connections with multiple Presidents - politics. Featuring a foreword by former U.S. Senator Kay Bailey Hutchison, TEX: The Father of Texas Swimming is five books in one, each detailing an aspect of a unique and fascinating life: From Mudhole to Michigan - The Story of Tex the Swimmer Longhorns and Frogmen - The Story of Tex the Coach Attawayto - The Founding of Camp Longhorn Political Bulldog - Tex and Politics It Only Takes a Spark... - The Legacy of Tex Robertson

Ballast Water Management Convention and BWMS Code with Guidelines for Implementation Lulu.com

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

Russia Under the Old Regime

He was a small-town boy who burst onto the international golf scene with a dramatic hook shot from deep in the woods to win the Masters— before the game he loved almost killed him.

Opening up about the toll that chasing and achieving his dream of being a champion golfer took on his mental health, Bubba Watson shares his powerful story of the breaking point that gave him clarity. Bubba Watson is known as the big-hitting left-handed golfer who plays with the pink driver—the small-town kid who grew up as a child golf prodigy before going on to win two Masters Tournaments, competing in the Olympics, and rising to be the number two golfer in the world. But every dream comes with a price. Feeling that he was never good enough, Bubba began to let the constant criticism from fans and commentators haunt his thoughts. Success in the game he loved was killing him. In *Up and Down*, Bubba opens up about his debilitating anxiety attacks, the death of his father and namesake, adopting his children, and how reaching a breaking point professionally and personally drew him closer to his family and God. Golf is what Bubba Watson does, but it is not who he is. Through his story, you'll learn how Bubba: Overcame his anxiety and feelings of inadequacy Found his true identity not in the standards of the world, but in the God who already knows he is enough Learned to trust God with his gifts, family, and biggest dreams Became the husband, father, friend, and mentor he was called to be Life, like golf, is filled with ups and downs. *Up and Down* is the inspiring story of an imperfect man striving to become the best person he can be—wherever the course may take him.

Foreign Direct Investment and the Multinational Enterprise

The Routledge Handbook of Sustainable Design considers the design, not only of artifacts, but of structures, systems, and interactions in the context of sustaining our shared planet. This revised edition introduces new and updated chapters, as well as a new section on pedagogy for sustainable design. With authors from around the world, design is positioned in context with recent crises such as global pandemics, racial reckoning, political unrest, and natural disasters. Just as design is an interdisciplinary field, the climate crisis is deeply tangled in racial justice, gender justice, global health, economics, trade, and more. Divided into six sections, it presents a holistic approach to understanding the many facets of sustainable design: Part 1: Systems and Design Part 2: Complexities of Sustainable Design Part 3: Community Engaged Design for Local and Global Diversity Part 4: Design for Sustainable Behaviors Part 5: Design Futures Part 6: Pedagogy in Design for Sustainability Arguing that design needs to restore, regenerate, and rejuvenate our planet and people, this handbook will be invaluable to researchers, students, and practitioners across all subdisciplines of design, architecture, business, energy management, visual arts, and environmental studies, among others.

The multinational firm and its main vehicle, foreign direct investment, are key forces in economic globalization. Their importance to the world economy can be seen in the fact that since 1990 foreign direct investment has grown more rapidly than the world GDP and world trade. Despite this, the causes and consequences of multinational firm activity are little understood and until recently relatively unexamined in the theoretical literature. This CESifo volume fills this gap, examining the multinational enterprise (MNE) and foreign direct investment (FDI) from both theoretical and empirical perspectives. In the theoretical chapters, leading scholars take a wide range of modern analytical approaches—from new growth and trade theories to new economic geography, industrial organization, and game theory. Taking current theoretical work on MNE and FDI as a starting point and aiming to extend the existing theoretical framework, the contributors consider such topics as investment liberalization and firm location, tax competition, and welfare consequences of FDI and outsourcing. The empirical chapters test several of the key hypotheses of recent theoretical work on MNE and FDI, examining topics that include productivity effects on Italian MNEs, the different effects of outsourcing in Austria and Poland, location decisions of MNEs in the European Union, and other topics.
