The author traces with compelling detail the evolution of the Russian state, where the Tsar claimed to own the land and its inhabitants as if they were his own personal property. Professor Pipes analyzes the political behavior of Russia's peasantry, nobility and bourgeoisie as well as its clergy, showing why none of them could limit the absolute power of the state. He discusses how the intelligentsia challenged the Tsars' power, leading to increased repression and Russia's development as a bureaucratic police state. This sweeping epic brings Russia's turbulent history to life and helps us better understand the roots of modern Russia.

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war.

When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had

forecast. This first English translation of Heinz Guderian's classic *take him*.

book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

Philosophy and the Belief in a Life after Death Springer Science & Business Media

He was a small-town boy who burst onto the international golf scene with a dramatic hook shot from deep in the woods to win the Masters— before the game he loved almost killed him.

Opening up about the toll that chasing and achieving his dream of being a champion golfer took on his mental health, Bubba Watson shares his powerful story of the breaking point that gave him clarity. Bubba Watson is known as the big-hitting left-handed golfer who plays with the pink driver—the small-town kid who grew up as a child golf prodigy before going on to win two Masters Tournaments, competing in the Olympics, and rising to be the number two golfer in the world. But every dream comes with a price. Feeling that he was never good enough, Bubba began to let the constant criticism from fans and commentators haunt his thoughts. Success in the game he loved was killing him. In *Up and Down*, Bubba opens up about his debilitating anxiety attacks, the death of his father and namesake, adopting his children, and how reaching a breaking point professionally and personally drew him closer to his family and God. Golf is what Bubba Watson does, but it is not who he is. Through his story, you'll learn how Bubba: Overcame his anxiety and feelings of inadequacy Found his true identity not in the standards of the world, but in the God who already knows he is enough Learned to trust God with his gifts, family, and biggest dreams Became the husband, father, friend, and mentor he was called to be Life, like golf, is filled with ups and downs. *Up and Down* is the inspiring story of an imperfect man striving to become the best person he can be—wherever the course may

In the past decade, a number of different research communities within the computational sciences have studied learning in networks, starting from a number of different points of view. There has been substantial progress in these different communities and surprising convergence has developed between the formalisms. The awareness of this convergence and the growing interest of researchers in understanding the essential unity of the subject underlies the current volume. Two research communities which have used graphical or network formalisms to particular advantage are the belief network community and the neural network community. Belief networks arose within computer science and statistics and were developed with an emphasis on prior knowledge and exact probabilistic calculations. Neural networks arose within electrical engineering, physics and neuroscience and have emphasised pattern recognition and systems modelling problems. This volume draws together researchers from these two communities and presents both kinds of networks as instances of a general unified

graphical formalism. The book focuses on probabilistic methods for learning and inference in graphical models, algorithm analysis and design, theory and applications. Exact methods, sampling methods and variational methods are discussed in detail. Audience: A wide cross-section of computationally oriented researchers, including computer scientists, statisticians, electrical engineers, physicists and neuroscientists.

Mutineer's Moon Taylor & Francis

The International Convention for the Control and Management of Ships' Ballast Water and Sediments, 2004 (BWM Convention), is concerned with preventing, minimizing and ultimately eliminating the risks to the environment, human health, property and resources arising from the transfer of harmful aquatic organisms and pathogens, through the control and management of ships' ballast water and sediments. The BWM Convention also aims to avoid unwanted side-effects from that control and encourages developments in related knowledge and technology. The 2018 consolidated edition aims to provide an easy and comprehensive reference to the up-to-date provisions and unified interpretation of articles and annex of the BWM Convention

MUTINY For Lt. Commander Colin MacIntyre, it began as a routine training flight over the Moon. For Dahak, a self-aware Imperial battleship, it began millennia ago when that powerful artificial intelligence underwent a mutiny in the face of the enemy. The mutiny was never resolved-Dahak was forced to maroon not just the mutineers but the entire crew on prehistoric Earth. Dahak has been helplessly waiting as the descendants of the loyal crew regressed while the mutineers maintained control of technology that kept them alive as the millennia passed. But now Dahak's sensors indicate that the enemy that devastated the Imperium so long ago has returned-and Earth is in their path. For the sake of the planet, Dahak must mobilize its defenses. And that it cannot do until the mutineers are put down. So Dahak has picked Colin MacIntyre to be its new captain. Now MacIntyre must mobilize humanity to destroy the mutineers once and for all-or Earth will become a cinder in the path of galactic conquest. An officer in the original Navy SEALs, an Olympian, a national champion, the first swim coach at the University of Texas, and the founder of the nation's biggest summer camp, Tex Robertson was a rare individual who pushed the bounds of what one man can accomplish in a lifetime. From his creation of the now-ubiquitous flip turn technique as a swimmer at Michigan to his numerous inventions at Camp Longhorn (including the Frisbee), the effects are still felt today from the life of a man who grew up in frontier West Texas and became, by sheer force of will, an influential figure in state history. To have a major impact in just one area of expertise would be impressive in itself, but Tex Robertson impacted swimming, the U.S. military, wildlife conservation, coaching, youth camping, and - through his connections with multiple Presidents - politics. Featuring a foreword by former U.S. Senator Kay Bailey Hutchison, TEX: The Father of Texas Swimming is five books in one, each detailing an aspect of a unique and fascinating life: From Mudhole to Michigan - The Story of Tex the Swimmer Longhorns and Frogmen - The Story of

Trust Accounting in One Hour for Lawyers

This book critically examines the case for and against the belief in personal survival of bodily death. It discusses key philosophical questions. How could a discarnate individual be identified as a person who was once alive? What is the relationship between minds and their brains? Is a 'next world' conceivable? The book also examines classic arguments for the immortality of the soul, and focuses on types of prima facie evidence of survival: near-death experiences, apparitions, mediumistic communications, and ostensible reincarnation cases.

The multinational firm and its main vehicle, foreign direct investment, are key forces in economic globalization. Their importance to the world economy can be seen in the fact that since 1990 foreign direct investment has grown more rapidly than the world GDP and world trade. Despite this, the causes and consequences of multinational firm activity are little understood and until recently relatively unexamined in the theoretical literature. This CESifo volume fills this gap, examining the multinational enterprise (MNE) and foreign direct investment (FDI) from both theoretical and empirical perspectives. In the theoretical chapters, leading scholars take a wide range of modern analytical approaches--from new growth and trade theories to new economic geography, industrial organization, and game theory. Taking current theoretical work on MNE and FDI as a starting point and aiming to extend the existing theoretical framework, the contributors consider such topics as investment liberalization and firm location, tax competition, and welfare consequences of FDI and outsourcing. The empirical chapters test several of the key hypotheses of recent theoretical work on MNE and FDI, examining topics that include productivity effects on Italian MNEs, the different effects of outsourcing in Austria and Poland, location decisions of MNEs in the European Union, and other topics.

From the authors of the best-selling The Secrets of Happily Married Men comes the much-anticipated follow-up book The Secrets of Happily Married Women. In their first book, Dr. Haltzman and his coauthor Theresa Foy DiGeronmio outlined a recipe for men about growing a happy marriage: treat marriage with the same sense of purpose, resolve, and single-minded devotion that they have for their job. Although that workplace formula works well for men, an entirely different set of criteria resonate with women. In The Secrets of Happily Married Women, Dr. Haltzman tells us stories from real women who are happy in their relationships. These women know how to get more out of their partners by doing less, by not trying so hard to make men perfect, not dragging them to couples therapy, not expecting them to think or behave like a woman. These are women from Dr. Haltzman's clinical practice and culled from thousands of contributors to his Web site www.HappilyMarriedWomen.com. They have learned to understand how men really work and tap into men's powerful hard-wired

desire to please women and "be a better man."
