Where It Begins:
Pickups. To
amplify an
acoustic guitar, we
first need to
convert its
acoustic sound
into an electrical
signal, which
requires either a
microphone or a
pickup. Mics can

be effective in
quiet settings, but
present challenges
when you're
playing loud gigs,
or performing in a
setting where a
mic will also pick
up other
instruments.

A transducer or Piezo
pickup is a great
option if you want to
amplify a nylon
string acoustic guitar
as they work by
detecting physical
vibrations rather than
creating a magnetic
field. Disadvantages
The sound of
transducer and Piezo
pickups can be
considered a bit
brittle or unnatural,
especially with that
characteristic 'piezo-
quack' but that can be
managed.
