Technology is an increasingly popular part of music education in schools that attracts students to school music who might not otherwise be involved. In many teacher preparation programs, music technology is an afterthought that does not receive the same extensive treatment as do traditional areas of music teaching such as band, orchestra, choir, and general music. This book helps to establish a theoretical and practical foundation for how to teach students to use technology as the major means for developing their musicianship. Including discussions of lesson planning, lesson delivery, and assessment, readers will learn how to gain comfort in the music technology lab. *Theory and Practice of Technology-Based Music Instruction* also includes "profiles of practice" that dive into the experiences of real teachers in music technology classes, their struggles, their successes, and lessons we can learn from both. In this second edition, new profiles feature Teachers of Color who use technology extensively in their varied types of music teaching. This edition encourages readers to think about issues of inequity of social justice in music education technology and how teachers might begin to address those concerns. Also updated are sections about new standards that may guide music education technology practice, about distance and technology-enhanced learning during the

global pandemic, and about ways to integrate technology in emerging contexts.

Foundations of Music Technology explores the core concepts of music technology and its uses as a mechanism to facilitate musicianship in a way that is accessible to all students--from the musician with limited technology skills to the technology expert with little knowledge in music notation. The text uses a free, customized software application for Mac or PC in order to demonstrate fundamental concepts of music technology germane to all professional applications like recording, synthesis, digital notation, MIDI, automating effects, acoustics, and more. With the concepts grasped using this "software-independent" approach, students can then transfer those learned skills over to the software of their choice.
