Why do some writers destroy themselves by drinking alcohol? Before our health-conscious age it would be true to say that many writers drank what we now regard as excessive amounts. Graham Greene, for instance, drank on a daily basis quantities of spirits and wine and beer most doctors would consider as being dangerous to his health. But he was rarely out of control and lived with his considerable wits intact to the age of eighty-six. W. H. Auden drank the most of a bottle of spirits a day, but also worked hard and steadily every day until his death. Even T. S. Eliot, for all his pontifical demeanour, was extremely fond of gin and was once observed completely drunk on a London Tube station by a startled friend. These

were not writers who are generally regarded as alcoholics. 'Alcoholic' is, in any case, a slippery word, as exemplified by Dylan Thomas's definition of an alcoholic as 'someone you dislike who drinks as much as you.' The word is still controversial and often misunderstood and misapplied. What acclaimed novelist and poet William Palmer's book is interested in is the effect that heavy drinking had on writers, how they lived with it and were sometimes destroyed by it, and how they described the whole private and social world of the drinker in their work.

The mechanical engineering curriculum in most universities includes at least one elective course on the subject of reciprocating piston engines. The majority of these courses today emphasize the application of thermodynamics to engine efficiency, performance, combustion, and emissions. There are several very good textbooks that support education in these aspects of engine development. However, in most companies engaged in engine development there are far more engineers working in the areas of design and mechanical development. University studies should include opportunities that prepare engineers desiring to work in these aspects of engine development as well. My colleagues and I have undertaken the development of a series of graduate courses in engine design and mechanical development. In doing so it becomes quickly apparent that no suitable text-book exists in support of such courses. This book was written in the hopes of beginning to address the need for an engineering-based introductory text in engine design and mechanical development. It is of necessity an overview. Its focus is limited to reciprocating-piston internal-combustion engines – both diesel and spark-ignition engines. Emphasis is specifically on automobile engines, although much of the discussion applies to larger and smaller engines as well. A further intent of this book is to provide a concise reference volume on engine design and mechanical development processes for engineers serving the engine industry. It is intended to provide basic information and most of the chapters include recent references to guide more in-depth study.

When dealing with rock in civil engineering, mining engineering and other engineering, the process by which the rock fails under load should be understood, so that safe structures can be built on and in the rock. However, there are many ways for loading rock and rock can have a variety of idiosyncracies. This reference book provides engineers and researchers with the essential knowledge for a clear understanding of the process of rock failure under different conditions. It contains an introductory chapter explaining the role of rock failure in engineering projects plus a summary of the theories governing rock failure and an explanation of the computer simulation method. It subsequently deals in detail with explaining, simulating and illustrating rock failure in laboratory and field. The concluding chapter discusses coupled modelling and the anticipated future directions for this type of computer simulation. An appendix describing

the RFA numerical model (Rock Failure Process Analysis program) is also included. About the Authors Chun'an Tang has a PhD in Mining Engineering and is a Professor at the School of Civil & Hydraulic Engineering at Dalian University of Technology in China. Jeeves—my man, you know—is really a most extraordinary chap. So capable. Honestly, I shouldn't know what to do without him. On broader lines he's like those chappies who sit peering sadly over the marble battlements at the Pennsylvania Station in the place marked "Inquiries." You know the Johnnies I mean. You go up to them and say: "When's the next train for Melonsquashville, Tennessee?" and they reply, without stopping to think, "Two-forty-three, track ten, change at San Francisco." And they're right every time. Well, Jeeves gives you just the same impression of omniscience. As an instance of what I mean, I remember meeting Monty Byng in Bond Street one morning, looking the last word in a grey check suit, and I felt I should never be happy till I had one like it. I dug the address of the tailors out of him, and had them working on the thing inside the hour. "Jeeves," I said that evening. "I'm getting a check suit like that one of Mr. Byng's." "Injudicious, sir," he said firmly. "It will not become you." "What absolute rot! It's the soundest thing I've struck for years." "Unsuitable for you, sir." Well, the long and the short of it was that the confounded thing came home, and I put it on, and when I caught sight of myself in the glass I nearly swooned. Jeeves was perfectly right. I looked a cross between a music-hall comedian and a cheap bookie. Yet Monty had looked fine in absolutely the same stuff. These things are just Life's mysteries, and that's all there is to it. But it isn't only that Jeeves's judgment about clothes is infallible, though, of course, that's really the main thing. The man knows everything. There was the matter of that tip on the "Lincolnshire." I forget now how I got it, but it had the aspect of being the real, red-hot tabasco. "Jeeves," I said, for I'm fond of the man, and like to do him a good turn when I can, "if you want to make a bit of money have something on Wonderchild for the 'Lincolnshire.'"
