An aging California vintner is determined to protect her empire from a hostile family takeover and the dark secrets that could destroy everything she loves At age seventy-four, Assaria "Sari" LeBaron is still a force to be reckoned with. For decades, she has run the Baronet Vineyards, one of California's largest and most successful wine producers, maintaining sole control even after a suspicious accident left her permanently crippled. And now, in her golden years, the formidable Sari refuses to relinquish power to her own children, a decision that has only served to increase tensions among her already emotionally damaged family members. But Sari's ambitious son, Eric, is no longer willing to play a subservient role, and has begun working behind the scenes to take over the business, forming alliances within and outside the family in his effort to dethrone the unyielding matriarch. The most difficult fight of Sari LeBaron's long and eventful life has begun; a heart-breaking struggle that will pit loved one against loved one and expose long-hidden secrets that could destroy both Sari's business and her family. The LeBaron Secret is another riveting excursion into a world of privilege that Stephen Birmingham knows intimately. It is a breathtaking tale of secrets and lies, shady double-dealings, family skeletons, and the inner turmoil of the fabulously wealthy as only the bestselling author of "Our Crowd" and The Auerbach Will could tell it.

This thesis deals with two important and very timely aspects of the future power system operation - assessment of demand flexibility and advanced demand side management (DSM) facilitating flexible and secure operation of the power network. It provides a clear and comprehensive literature review in these two areas and states precisely the original contributions of the research. The book first demonstrates the benefits of data mining for a reliable assessment of demand flexibility and its composition even with very limited observability of the end-users. It then illustrates the importance of accurate load modelling for efficient application of DSM and considers different criteria in designing DSM programme to achieve several objectives of the network performance simultaneously. Finally, it demonstrates the importance of considering realistic assumptions when planning and estimating the success of DSM programs. The findings presented here have both scientific and practical significance; they gained her BSc and MSc degrees in electrical engineering from the University of Belgrade in 2011 and 2012 respectively. She graduated with her PhD from the University of Manchester. She has presented at several conferences, and has won runner-up prizes in poster presentation at three. She has authored or co-authored more than 40 journal, conference and technical papers.provide a basis for further research, and can be used to guide future applications in industry.

Why do some writers destroy themselves by drinking alcohol? Before our health-conscious age it would be true to say that many writers drank what we now regard as excessive amounts. Graham Greene, for instance, drank on a daily basis quantities of spirits and wine and beer most doctors would consider as being dangerous to his health. But he was rarely out of control and lived with his considerable wits intact to the age of eighty-six. W. H. Auden drank the most of a bottle of spirits a day, but also worked hard and steadily every day until his death. Even T. S. Eliot, for all his pontifical demeanour, was extremely fond of gin and was once observed completely drunk on a London Tube station by a startled friend. These were not writers who are generally regarded as alcoholics. 'Alcoholic' is, in any case, a slippery word, as exemplified by Dylan Thomas's definition of an alcoholic as 'someone you dislike who drinks as much as you.' The word is still controversial and often misunderstood and misapplied. What acclaimed novelist and poet William Palmer's book is interested in is the effect that heavy drinking had on writers, how they lived with it and were sometimes destroyed by it, and how they described the whole private and social world of the drinker in their work.

This volume explores the relationship between space, pedagogy, and technology, with a particular focus on the latter since it is the connecting element that relates to all analysed contexts. The learning experience is investigated and supported by a review of works by referenced authors, underlining the active learning approach that can create better alliances among users and redefine the role of the teacher as a director and a facilitator. The volume offers a conceptualisation of learning technologies for innovative learning environments by creating a grid of technologies for active approaches. Then, it reflects on the comparison between the on-site and online learning environments, focusing on a stressful context. It offers and discusses an instructional design tool that supports teachers in designing hybrid learning contexts. Practitioners who wish to reframe technology in teaching using both digital and physical resources will find it very inspiring.
