If you've ever thought that standards-based teaching and required content prevent you from integrating subject areas, then here's a book that will change the way you think and alert you to exciting new possibilities in your approach to teaching. Learn how to identify the connections in your standards that provide the basis for interdisciplinary units. Explore all types of integrated curriculum and how they bridge content standards to authentic, relevant learning experiences. And understand how to create interdisciplinary units that provide data-based evidence of student learning. A planning template and detailed examples of successful integrated curriculums are included to help you implement integrated curriculum in practice. Discover how you can make learning more exciting for students--and rewarding for you.

This book seeks to examine the relations that obtain between law and a theory of law and legal reasoning and a theory of legal reasoning.

Most environmental statutes passed since 1970 have endorsed a pragmatic or 'precautionary' principle under which the existence of a significant risk is enough to trigger regulation. At the same time, targets of such regulation have often argued on grounds of inefficiency that the associated costs outweigh any potential benefits. In this work, Jason Johnston unpacks and critiques the legal, economic, and scientific basis for precautionary climate policies pursued in the United States and in doing so sheds light on why the global warming policy debate has become increasingly bitter and disconnected from both climate science and economics. Johnston analyzes the most influential international climate science assessment organizations, the US electric power industry, and land management and renewable energy policies. Bridging sound economics and climate science, this pathbreaking book shows how the United States can efficiently adapt to a changing climate while radically reducing greenhouse gas emissions.

Spatial and identity research operates with differentiations and relations. These are particularly useful heuristic tools when examining border regions where social and geopolitical demarcations diverge. Applying this approach, the authors of this volume investigate spatial and identity constructions in cross-border contexts as they appear in everyday, institutional and media practices. The results are discussed with a keen eye for obliquely aligned spaces and identities and relinked to governmental issues of normalization and subjectivation. The studies base upon empirical surveys conducted in Germany, France, Belgium and Luxembourg.

This book deals with the gathering of evidence in cross-border investigations in Europe. The issue of obtaining evidence in and from European countries has been among the most debated issues of EU cross-border cooperation in criminal matters over the last two decades, going through periods of intensive discussions and showing an extraordinary adaptability to the evolution of EU legislation for criminal matters. On the other hand, the prosecution and investigations of cross-border cases pose unprecedented challenges in the European scenario, characterized by the increasing flow and activity of citizens over the territory of more than one country and therefore by the need to lay the foundations of a transcultural criminal justice system. The book analyses this complex topic starting with the current perspectives of EU legislation, thus providing a critical analysis of the legislative initiative aimed at introducing a new tool for gathering almost any type of evidence in other Member States, i.e., the European Investigation Order. On a second level, this study deals with the solution models and human rights challenges posed by the increasingly intensive dialogues between domestic and

supranational case laws, and formulates essential guidelines for setting up a fair transnational enquiry system in Europe.

Following his lecture-course Eurythmy as Visible Singing, these fundamental lectures on speech eurythmy – offered in response to specific requests – gave Rudolf Steiner the opportunity to complete the foundations of the new art of movement. Speaking to eurythmists and invited artists, Steiner connects to the centuries-old esoteric and exoteric Western traditions of ‘ the Word ’ – the creative power in the sounds of the divine-human alphabet – giving it concrete form and expression in the performing arts, education and therapy. In addition to the fifteen lectures in the course, this special edition features supporting lectures and reports by Rudolf Steiner, dozens of photographs and line drawings, as well as introductions, commentary, notes and supplementary essays compiled by editor Alan Stott, including ‘ Eurythmy and the English Language ’ by Annelies Davidson. Although aimed primarily at the professional concerns of eurythmists who perform, teach or work as therapists, the lectures offer a wealth of suggestions and insights to those with artistic questions and concerns. ‘ Only someone who creatively unfolds a sense for art from an inner calling, an inner enthusiasm, can work as an artist in eurythmy. To manifest those possibilities of form and movement inherent in the human organisation, the soul must inwardly be completely occupied with art. This all-embracing character of eurythmy was the foundation for all that was presented. ’ – Rudolf Steiner ‘ For the poet, for the thinker, and for the movement artist who thinks with his/her whole body,

the highest mental act is done with all their heart and with all their mind and with all their soul. ’ – Alan Stott

"This splendid work of scholarship . . . sums up with economy and power all that the written record so far deciphered has to tell about the ancient and complementary civilizations of Babylon and Assyria."—Edward B. Garside, New York Times Book Review Ancient Mesopotamia—the area now called Iraq—has received less attention than ancient Egypt and other long-extinct and more spectacular civilizations. But numerous small clay tablets buried in the desert soil for thousands of years make it possible for us to know more about the people of ancient Mesopotamia than any other land in the early Near East. Professor Oppenheim, who studied these tablets for more than thirty years, used his intimate knowledge of long-dead languages to put together a distinctively personal picture of the Mesopotamians of some three thousand years ago. Following Oppenheim's death, Erica Reiner used the author's outline to complete the revisions he had begun. "To any serious student of Mesopotamian civilization, this is one of the most valuable books ever written."—Leonard Cottrell, Book Week "Leo Oppenheim has made a bold, brave, pioneering attempt to present a synthesis of the vast mass of philological and archaeological data that have accumulated over the past hundred years in the field of Assyriological research."—Samuel Noah Kramer, Archaeology A. Leo Oppenheim, one of the most distinguished Assyriologists of our time, was editor in charge of the Assyrian Dictionary of the Oriental Institute and John A. Wilson Professor of Oriental Studies at the University of Chicago.

Hebrew-English Edition of the Babylonian Talmud: Berakoth Polity This is a substantially revised and updated introduction to arithmetic topics, both ancient and modern, that have been at the centre of interest in applications of number theory, particularly in cryptography. As such, no background in algebra or number theory is assumed, and the book begins with a discussion of the basic number theory that is needed. The approach taken is algorithmic, emphasising estimates of the efficiency of the techniques that arise from the theory, and one special feature is the inclusion of recent applications of the theory of elliptic curves. Extensive exercises and careful answers are an integral part all of the chapters.

A teacher presents a lesson, and at the end asks students if they understand the material. The students nod and say they get it. Later, the teacher is dismayed when many of the students fail a test on the material. Why aren't students getting it? And, just as important, why didn't the teacher recognize the problem? In *Checking for Understanding*, Douglas Fisher and Nancy Frey show how to increase students' understanding with the help of creative formative assessments. When used regularly, formative assessments enable every teacher to determine what students know and what they still need to learn. Fisher and Frey explore a variety of engaging activities that

check for and increase understanding, including interactive writing, portfolios, multimedia presentations, audience response systems, and much more. This new 2nd edition of *Checking for Understanding* has been updated to reflect the latest thinking in formative assessment and to show how the concepts apply in the context of Fisher and Frey's work on gradual release of responsibility, guided instruction, formative assessment systems, data analysis, and quality instruction. Douglas Fisher and Nancy Frey are the creators of the Framework for Intentional and Targeted (FIT) Teaching™. They are also the authors of numerous ASCD books, including *The Formative Assessment Action Plan: Practical Steps to More Successful Teaching and Learning* and the best-selling *Enhancing RTI: How to Ensure Success with Effective Classroom Instruction and Intervention*.

Designing Science Presentations: A Visual Guide to Figures, Papers, Slides, Posters, and More, Second Edition, guides scientists of any discipline in the design of compelling science communication. Most scientists never receive formal training in the design, delivery and evaluation of scientific communication, yet these skills are essential for publishing in high-quality journals, soliciting funding, attracting lab personnel, and advancing a career. This clear, readable volume fills that gap, providing visually intensive guidance at every step—from the construction of original figures to the presentation and delivery of those figures in papers, slideshows, posters and websites. The book provides pragmatic advice on the preparation and delivery of exceptional scientific presentations and demonstrates hundreds of visually striking presentation techniques. Features clear headings for each section, indicating its message with graphic illustrations Provides clear and concise explanations of design principles traditionally taught in design or visualization courses Includes examples of high-quality figures, page layouts, slides, posters and webpages to aid readers in creating their own presentations Includes numerous "before and after" examples to illustrate the

contrast between poor and outstanding presentations

The aim of this book is to reflect on the complex practice of responsibility within the context of a globalised world and contemporary means of action. Levinas' exploration of the ethical serves as point of entry and is shown to be seeking inter-cultural political relevance through engagement with the issues of postcoloniality and humanism. Yet, Levinas fails to realise the ethical implications of the inevitable instrumental mediation between ethical meaning and political practice. With recourse to Weber, Apel and Ricoeur, Ernst Wolff proposes a theory of strategic co-responsibility for the uncertain global context of practice.

Three official languages have emerged in the Balkan region that was formerly Yugoslavia: Croatian in Croatia, Serbian in Serbia, and both of these languages plus Bosnian in Bosnia-Herzegovina. Bosnian, Croatian, Serbian, a Textbook introduces the student to all three. Dialogues and exercises are presented in each language, shown side by side for easy comparison; in addition, Serbian is rendered in both its Latin and its Cyrillic spellings. Teachers may choose a single language to use in the classroom, or they may familiarize students with all three. This popular textbook is now revised and updated with current maps, discussion of a Montenegrin language, advice for self-study learners, an expanded glossary, and an appendix of verb types. It also features:

- All dialogues, exercises, and homework assignments available in Bosnian, Croatian, and Serbian
- Classroom exercises designed for both small-group and full-class work, allowing for maximum oral participation
- Reading selections written by Bosnian, Croatian, and Serbian authors especially for this book
- Vocabulary lists for each individual section and full glossaries at the end of the book
- A short animated film, on an accompanying DVD, for use with chapter 15
- Brief grammar explanations after each dialogue, with a cross-reference to more detailed grammar chapters in the companion book,

Bosnian, Croatian, Serbian, a Grammar.

Properly crafted and individually tailored feedback on student work boosts student achievement across subjects and grades. In this updated and expanded second edition of her best-selling book, Susan M. Brookhart offers enhanced guidance and three lenses for considering the effectiveness of feedback: (1) does it conform to the research, (2) does it offer an episode of learning for the student and teacher, and (3) does the student use the feedback to extend learning? In this comprehensive guide for teachers at all levels, you will find information on every aspect of feedback, including

- Strategies to uplift and encourage students to persevere in their work.
- How to formulate and deliver feedback that both assesses learning and extends instruction.
- When and how to use oral, written, and visual as well as individual, group, or whole-class feedback.
- A concise and updated overview of the research findings on feedback and how they apply to today's classrooms. In addition, the book is replete with examples of good and bad feedback as well as rubrics that you can use to construct feedback tailored to different learners, including successful students, struggling students, and English language learners. The vast majority of students will respond positively to feedback that shows you care about them and their learning. Whether you teach young students or teens, this book is an invaluable resource for guaranteeing that the feedback you give students is engaging, informative, and, above all, effective.

Given the complexity of education, educational science can only focus on a limited number of research areas. This book suggests a few new research topics, all of which have not received adequate attention. In the first part of the book, these topics are related to the rhetoric of education, in the second to rituals in education.

We live in an era of aesthetics. Art has become both pervasive and powerful – it is displayed not only in museums and galleries but

also on the walls of corporations and it is increasingly fused with design. But what makes art so powerful, and in what does its power consist? According to a widespread view, the power of art – its beauty – lies in the eye of the beholder. What counts as art appears to be a function of individual acts of evaluation supported by powerful institutions. On this account, the power of art stems from a force that is not itself aesthetic, such as the art market and the financial power of speculators. Art expresses, in a disguised form, the power of something else – like money – that lies behind it. In one word, art has lost its autonomy. In this short book, Markus Gabriel rejects this view. He argues that art is essentially uncontrollable. It is in the nature of the work of art to be autonomous to such a degree that the art world will never manage to overpower it. Ever since the cave paintings of Lascaux, art has taken hold of the human mind and implemented itself in our very being. Thanks to the emergence of art we became human beings, that is, beings who lead their lives in light of an image of the human being and its position in the world and in relation to other species. Due to its structural, ontological power, art itself is and remains radically autonomous. Yet, this power is highly ambiguous, as we cannot control its unfolding. In this book, a leading proponent of New Realism applies this philosophical perspective to art to create a new aesthetic realism.
