Words and Thoughts Simon and Schuster

Discussing Plato's views on knowledge, recollection, dialogue, and epiphany, this ambitious volume offers a systematic analysis of the ways that Platonic approaches to education can help students navigate today's increasingly complex moral environment. Though interest in Platonic education may have waned due to a perceived view of Platonic scholarship as wholly impractical, this volume addresses common misunderstandings of Plato's work and highlights the contemporary relevance of Plato's ideas to contemporary moral education. Building on philosophical interpretations, the book argues persuasively that educators might employ Platonic themes and dialogue in the classroom. Split into two parts, the book looks first to contextualise Plato's theory of moral education within political, ethical, and educational frameworks. Equipped with this knowledge, part two then offers contemporary educators the strategies needed for implementing Plato's educational theory within the pluralistic, democratic classroom setting. A Platonic Theory of Moral Education will be of interest to academics, researchers, and post-graduate students in the fields of: ethics; Plato scholarship; moral psychology; educational foundations; and the philosophy of education.

This book would also benefit graduate students and scholars in teacher education. Mark E. Jonas is Professor of Education and Professor of Philosophy (by courtesy) at Wheaton College, US. Yoshiaki Nakazawa is Assistant Professor of Education at University of Dallas, US.

A brand new book, FUNDAMENTALS OF CHEMICAL ENGINEERING THERMODYNAMICS makes the abstract subject of chemical engineering thermodynamics more accessible to undergraduate students. The subject is presented through a problem-solving inductive (from specific to general) learning approach, written in a conversational and approachable manner. Suitable for either a one-semester course or two-semester sequence in the subject, this book covers thermodynamics in a complete and mathematically rigorous manner, with an emphasis on solving practical engineering problems. The approach taken stresses problem-solving, and draws from best practice engineering teaching strategies. FUNDAMENTALS OF CHEMICAL ENGINEERING THERMODYNAMICS uses examples to frame the importance of the material. Each topic begins with a motivational

example that is investigated in context to that topic. This framing of the material is helpful to all readers, particularly to global learners who require big picture insights, and hands-on learners who struggle with abstractions. Each worked example is fully annotated with sketches and comments on the thought process behind the solved problems. Common errors are presented and explained. Extensive margin notes add to the book accessibility as well as presenting opportunities for investigation. The Real ACT, 3rd Edition Oxford University Press

This publication presents fascinating new findings on ancient Romano-Egyptian funerary portraits preserved in international collections. Once interred with mummified remains, nearly a thousand funerary portraits from Roman Egypt survive today in museums around the world, bringing viewers face-to-face with people who lived two thousand years ago. Until recently, few of these paintings had undergone in-depth study to determine by whom they were made and how. An international collaboration known as APPEAR (Ancient Panel Paintings: Examination, Analysis, and Research) was launched in 2013 to promote the study of these objects and to gather scientific and historical findings into a shared database. The first phase of the project was marked with a two-day conference at the Getty Villa. Conservators, scientists, and curators presented new research on topics such as provenance and collecting, comparisons of works across institutions, and scientific studies of pigments, binders, and supports. The papers and posters from the conference are collected in this publication, which offers the most up-to-date information available about these fascinating remnants of the ancient world.

Financial Soundness Indicators (FSIs) are measures that indicate the current financial health and soundness of a country's financial institutions, and their corporate and household counterparts. FSIs include both aggregated individual institution data and indicators that are representative of the markets in which the financial institutions operate. FSIs are calculated and disseminated for the purpose of supporting macroprudential analysis--the assessment and surveillance of the strengths and vulnerabilities of financial systems--with a view to strengthening financial stability and limiting the likelihood of financial crises. Financial Soundness Indicators: Compilation Guide is intended to give guidance on the concepts, sources, and compilation and dissemination techniques underlying FSIs; to encourage the use and cross-country comparison of these data; and, thereby, to support national and international surveillance of financial systems.

Herodotus was an ancient Greek historian who lived in the fifth century BC (c.484 - 425 BC). He has been called the "Father of History", and was the first historian known to collect his materials systematically, test their accuracy to a certain extent and arrange them in a well-constructed and vivid narrative. The Histories-his masterpiece and the only work he is known to have produced-is a record of his "inquiry", being an investigation of the origins of the Greco-Persian Wars and including a wealth of geographical and ethnographical information. The Histories, were divided into nine books, named after the nine Muses: the "Muse of History", Clio, representing the first book, then Euterpe, Thaleia,

Melpomene, Terpsichore, Erato, Polymnia, Ourania and Calliope for books 2 to 9, respectively.

It is a near truism of philosophy of language that sentences are prior to words---that they are the only things that fundamentally have meaning. Robert's Stainton's study interrogates this idea, drawing on a wide body of evidence to argue that speakers can and do use mere words, not sentences, to communicate complex thoughts.

The Histories Book 7: Polymnia International Monetary Fund

This book bridges a scholarly divide between empirical and normative theorizing about procedural justice in the context of relations of power between citizens and the state. Empirical research establishes that people's understanding of procedural justice is shaped by relational factors. A central premise of this volume is that this research is significant but needs to be complemented by normative theorizing that draws on relational theories of ethics and justice to explain the moral significance of procedures and make normative sense of people's concerns about relational factors. The chapters in Part 1 provide comprehensive reviews of empirical studies of procedural justice in policing, courts and prisons. Part 2 explores empirical and normative perspectives on procedural justice and legitimacy. Part 3 examines philosophical approaches to procedural justice. Part 4 considers the implications of a relational perspective for the design of procedures in a range of legal contexts. This collection will be of interest to a wide academic readership in philosophy, law, psychology and criminology.

This book is a detailed study of Aristotle's theory of the sense organs. It looks at all five sense organs and shows how Aristotle's views about them follow from his views about their function in perception. The book also shows how Aristotle's explanation of why we have sense organs is fundamentally different from that of modern science. The book should appeal to readers specifically interested in Aristotle's philosophy of mind and biology as well as to those generally interested in sense perception.

Protestant reformers found the prophet and biblical prophecy to be exceptionally effective for framing their reforming work under the authority of Scripture—for the true prophet speaks the Word of God alone and calls the people, their worship, and their beliefs and practices back to the Word of God. uses the prophet and biblical prophecy as a powerful lens through which to view many aspects of the reformers in the sixteenth and seventeenth centuries. G. Sujin Pak argues that these prophetic concepts served the substantial purposes of articulating a theology of the priesthood of all believers, a biblical model of the pastoral office, a biblical vision of the reform of worship, and biblical processes for discerning right interpretation of Scripture. Pak demonstrates the ways in which understandings of the prophet and biblical prophecy

contributed to the formation of distinct confessional identities. She goes on to demonstrate the waning of explicit prophetic terminology, particularly among the next generation of Protestant leadership. Eventually, she shows, the Protestant reformers concluded that the figure of the prophet carried with it as many problems as it did benefits, though they continued to give much time and attention to the exegesis of biblical prophetic writings.

Winner of the Pulitzer prize in 1974 and the culmination of a life's work, *The Denial of Death* is Ernest Becker's brilliant and impassioned answer to the 'why' of human existence. In bold contrast to the predominant Freudian school of thought, Becker tackles the problem of the vital lie - man's refusal to acknowledge his own mortality. The book argues that human civilisation is a defence against the knowledge that we are mortal beings. Becker states that humans live in both the physical world and a symbolic world of meaning, which is where our 'immortality project' resides. We create in order to become immortal - to become part of something we believe will last forever. In this way we hope to give our lives meaning. In *The Denial of Death*, Becker sheds new light on the nature of humanity and issues a call to life and its living that still resonates decades after it was written.

Daniel Russell examines Plato's subtle and insightful analysis of pleasure and explores its intimate connections with his discussions of value and human psychology. Russell offers a fresh perspective on how good things bear on happiness in Plato's ethics, and shows that, for Plato, pleasure cannot determine happiness because pleasure lacks a direction of its own. Plato presents wisdom as a skill of living that determines happiness by directing one's life as a whole, bringing about goodness in all areas of one's life, as a skill brings about order in its materials. The 'materials' of the skill of living are, in the first instance, not things like money or health, but one's attitudes, emotions, and desires where things like money and health are concerned. Plato recognizes that these 'materials' of the psyche are inchoate, ethically speaking, and in need of direction from wisdom. Among them is pleasure, which Plato treats not as a sensation but as an attitude with which one ascribes value to its object. However, Plato also views pleasure, once shaped and directed by wisdom, as a crucial part of a virtuous character as a whole. Consequently, Plato rejects all forms of hedonism, which allows happiness to be determined by a part of the psyche that does not direct one's life but is among the materials to be directed. At the same time, Plato is also able to hold both that virtue is sufficient for happiness, and that pleasure is necessary for happiness, not as an addition to one's virtue, but as a constituent of one's whole virtuous character itself. Plato therefore offers an illuminating role for pleasure in ethics and psychology, one to which we may be unaccustomed: pleasure emerges not as a sensation or even a mode of activity, but as an attitude - one of the ways in which we construe our world - and as such, a central part of every character.
