This book starts off with a detailed focus on

forests, domains, trusts, schemas and partitions. Next, you'll learn how to manage domain controllers, organizational units and the default containers. Going forward, you'll explore managing Active Directory sites as well as identifying and solving replication problems. The next set of chapters covers the different components of Active Directory and discusses the management of users, groups and computers. You'll also work through recipes that help you manage your Active Directory domains, manage user and group objects and computer accounts, expiring group memberships and group Managed Service Accounts (gMSAs) with

PowerShell. You'll understand how to work with Group Policy and how to get the most out of it. The last set of chapters covers federation, security and monitoring. You will also learn about Azure Active Directory and how to integrate on-premises Active Directory with Azure AD. You'll discover how Azure AD Connect synchronization works, which will help you manage Azure AD. By the end of the book, you have learned about Active Directory and Azure AD in detail. What you will learn Manage new Active Directory features, such as the Recycle Bin, group Managed Service Accounts, and fine-grained password policies Work with Active Directory from the command line and use Windows PowerShell

recognize the monetary benefit of Active Directory? Are there any good software tools that can push ldap active directory users additions and changes to another system via soap messages? Think about the kind of project structure that would be appropriate for your Active Directory project. Should it be formal and complex, or can it be less formal and relatively simple? How can the value of Active Directory be defined? What are the business objectives to be achieved with Active Directory? Defining, designing, creating, and implementing a process to solve a business challenge or meet a business objective is the most valuable role... In EVERY company, organization and department. Unless you are talking a one-time, single-use project within a business, there should be a process. Whether that process is managed and implemented by humans, AI, or a

combination of the two, it needs to be designed by someone with a complex enough perspective to ask the right questions. Someone capable of asking the right questions and step back and say, 'What are we really trying to accomplish here? And is there a different way to look at it?' For more than twenty years, The Art of Service's Self-Assessments empower people who can do just that - whether their title is marketer, entrepreneur, manager, salesperson, consultant, business process manager, executive assistant, IT Manager, CxO etc... - they are the people who rule the future. They are people who watch the process as it happens, and ask the right questions to make the process work better. This book is for managers, advisors, consultants, specialists, professionals and anyone interested in Active Directory assessment. All the tools you

need to an in-depth Active Directory Self-Assessment. Featuring 664 new and updated case-based questions, organized into seven core areas of process design, this Self-Assessment will help you identify areas in which Active Directory improvements can be made. In using the questions you will be better able to: - diagnose Active Directory projects, initiatives, organizations, businesses and processes using accepted diagnostic standards and practices - implement evidence-based best practice strategies aligned with overall goals - integrate recent advances in Active Directory and process design strategies into practice according to best practice guidelines Using a Self-Assessment tool known as the Active Directory Scorecard, you will develop a clear picture of which Active Directory areas need attention. Included with your purchase of the book

is the Active Directory Self-Assessment downloadable resource, which contains all questions and Self-Assessment areas of this book in a ready to use Excel dashboard, including the self-assessment, graphic insights, and project planning automation - all with examples to get you started with the assessment right away. Access instructions can be found in the book. You are free to use the Self-Assessment contents in your presentations and materials for customers without asking us - we are here to help.

The book will give a brief summary of AD compared to NT 4.0 and NDS. Once the groundwork is established for AD, there will be discussions about how to implement the different components and objects within AD. After the AD is established, there will be a discussion about how AD will interact with the other network services, such as DNS, DHCP, and WINS, as well as how to properly plan for the AD infrastructure, including Group Policy Objects, Delegate Control, administrative concepts, and installation considerations. There will be tips on how to avoid the most common traps of designing and implementing AD infrastructures. The final

chapter will give real world AD authentication and authorization design examples that have been implemented by some of the largest and most well known companies in the industry.

Mastering Active Directory

John Wiley & Sons

When you need practical hands-on support for Active Directory, the updated edition of this extremely popular Cookbook provides quick solutions to more than 300 common (and uncommon) problems you might encounter when deploying, administering, and automating Microsoft's network directory service. For the third edition, Active Directory expert Laura E. Hunter offers troubleshooting recipes based on valuable input from

Windows administrators, in addition to her own experience. You'll find solutions for the Lightweight Directory Access Protocol (LDAP), ADAM (Active Directory Application Mode), multi-master replication, Domain Name System (DNS), Group Policy, the Active Directory Schema, and many other features. The Active Directory Cookbook will help you: Perform Active Directory tasks from the command line Use scripting technologies to automate Active Directory tasks Manage new Active Directory features, such as Read-Only Domain Controllers, fine-grained password policies, and more Create domains and trusts Locate users whose passwords are about to expire Apply a security filter to group policy objects Check for potential replication

problems Restrict hosts from performing LDAP queries View DNS server performance statistics Each recipe includes a discussion explaining how and why the solution works, so you can adapt the problem-solving techniques to similar situations. Active Directory Cookbook is ideal for any IT professional using Windows Server 2008, Exchange 2007, and Identity Lifecycle Manager 2007, including Active Directory administrators looking to automate task-based solutions. "It is rare for me to visit a customer site and not see a copy of Active Directory Cookbook on a shelf somewhere, which is a testament to its usefulness. The Cookbook takes the pain out of everyday AD tasks by providing concise, clear and relevant recipes. The fact that

the recipes are provided using different methods (graphical user interface, command line and scripting) means that the book is suitable for anyone working with AD on a day-to-day basis. The introduction of PowerShell examples in this latest edition will be of particular interest for those looking to transition from VBScript. Laura has also done a great job in extending the Cookbook in this edition to encompass the broad range of changes to AD in Windows Server 2008." --Tony Murray, Founder of Activedir.org and Directory Services MVP "If you already understand Active Directory fundamentals and are looking for a quick solution to common Active Directory related tasks, look no further, you have found the book that you need." --joe Richards, Directory Services

Active Directory Fast Start: A Quick Start Guide for Active Directory Peachpit Press

This guide is aimed at network managers, system integrators, and consultants involved in Active Directory branch office implementations, either in their own organizations or for client companies. By implementing the procedures in this document, you should be able to deploy and maintain Active Directory in a large branch office environment. Deploying Active Directory™ directory service in a large branch office environment, in which each branch will have a domain controller locally and branches may be connected

to the corporate data center through low-speed links, can be a complicated procedure.

This guide intends to simplify this process by providing you with a series of easily understand-able steps that will help you achieve your goal of implementing Active Directory in a branch office environment of 100 or more branches.
