The concept of an intelligent agent - a computational system capable of performing certain tasks autonomously - derived from the growing potential of digital computers in the mid 20th century and had been widely adopted by the early 1990s. Partly in parallel with this concept, the perspective of ambient intelligence (AmI) emerged in the late 1990s. Agent technology and AmI have many similarities, and the main purpose of this book is to provide an overview of the state-of-the-art of the scientific area that integrates these two. The book addresses a wide variety of topics related to agents and AmI, including theoretical, practical, design, implementation, ethical and philosophical issues. The 12 chapters are

arranged in four sections. The first consists of three chapters discussing ethical and philosophical issues; the second part explores various approaches that can be used to develop agent-based AmI Systems; the third part contains three chapters that share the goal to endow AmI systems with useful properties like intelligence and adaptivity and the last section presents concrete applications of agent-based AmI systems. This book provides an insight into recent achievements and future challenges at the intersection of agent technology and ambient intelligence and will assist the development of more intelligent, flexible, effective and user-friendly systems as well as posing critical questions about the future of the role of agents within the AmI perspective. Assessing the adoption of high-iron bean varieties and their impact on iron intakes and other livelihood outcomes in Rwanda: Main survey report Multilingual Matters Contained in this volume are the proceedings of the international conference on the "Genetic Toxicology of Complex Mixtures," held from July 4-7, 1989, in Washington, DC. This meeting was a satellite of the "Fifth International Conference on Environmental Mutagens" and the seventh in a biennial series of conferences on "Short-term Bioassays in the Analysis of Complex Environmental

Mixtures." Our central objective in calling together key researchers from around the world was to extend our knowledge of the application of the methods of genetic toxicology and analytical chemistry in the evaluation of chemical mixtures as they exist in the environment. This conference emphasized the study of genotoxicants in air and water, and the assessment of human exposure and cancer risk. The latest strategies and methodologies for biomonitoring of genotoxicants (including transformation products) were described in the context of the ambient environment. Source characterization and source apportionment were discussed as an aid to understanding the origin and relative contribution of various kinds of complex mix

tures to the ambient environment. Similarly, investigations of genotoxins found in the indoor environment (sidestream cigarette smoke) and in drinking water (chlorohydroxyfuranones) were given special attention in terms of their potential health impacts. New molecular techniques were described to enable more precise quantitation of internal dose and dose to target tissues. The emphasis of presentations on exposures/effects assessment was on integrated quantitative evaluation of human exposure and potential health effects.

Connect students in grades 4 – 6 with science using Physical Science: Daily Skill Builders. This 96-page book features two short, reproducible activities per page and

includes enough lessons for an entire school year. It covers topics such as simple machines and alternative energy sources, understanding the behavior and uses of electricity, and framing scientific questions and recognizing scientific evidence. Activities allow for differentiated instruction and can be used as warm-ups, homework assignments, and extra practice. The book supports National Geography Standards.

Teach computing concepts without computers! How to Raise a Tech Genius makes the computing curriculum accessible for parents and families. We live in a digital world - one in which our children are surrounded by technology. It's a part of their lives in a way

that even the most tech-savvy adults aren't fully able to comprehend. What we do know is that the workplace of tomorrow will require our children to harness the power behind the technology, to be able to understand key concepts and apply them. Logical reasoning, creativity and problem solving are skills that are becoming increasingly essential in the world of work. How can we best prepare our children to enter this world? How to Raise a Tech Genius is a practical book that assumes no prior knowledge or understanding of computing and enables parents to learn skills and concepts alongside their children. The quick, easy and fun fifteen-minute activities within the book have been developed using first-hand teaching expertise and are fully mapped to the computing curriculum taught in schools. From a deck of playing cards to the story books on your bookshelf or even the contents of your fridge, How to Raise a Tech Genius uses everyday objects that can be found around your home to illustrate core computer science concepts. Children and adults alike will enjoy playing games while developing their algorithmic thinking and logical reasoning skills. This book demystifies the computing curriculum for adults, showing parents a whole new side of computing, coding and technology so that they can help their child become a computing genius!

unique. It's not just about what tastes good: advances in cooking technology have been a constant part of our progress, from the ability to control fire to the emergence of agriculture to modern science's understanding of what happens at a molecular level when we apply heat to food. Mastering new ways of feeding ourselves has resulted in leaps in longevity and explosions in population—and the potential of cooking science is still largely untapped. In *Cook, Taste, Learn*, the food scientist and best-selling author Guy Crosby offers a lively tour of the history and science behind

the art of cooking, with a focus on achieving a healthy daily diet. He traces the evolution of cooking from its earliest origins, recounting the innovations that have unraveled the mysteries of health and taste. Crosby explains why both home cooks and professional chefs should learn how to apply cooking science, arguing that we can improve the nutritional quality and gastronomic delight of everyday eating. Science-driven changes in the way we cook can help reduce the risk of developing chronic diseases and enhance our quality of life. The book features accessible

explanations of complex topics as well as a selection of recipes that illustrate scientific principles. *Cook, Taste, Learn* reveals the possibilities for transforming cooking from a craft into the perfect blend of art and science.

'Beyond the Jordan' is a collection of essays written to honor the life and labors of W. Harold Mare. Dr. Mare spent much of his academic

career as Professor of New Testament at Covenant Theological Seminary in St. Louis. A man of indefatigable energy, broad interests, and an unswerving commitment to the Christian faith, his research expanded from New Testament interests to the archaeology of that world, including ancient Canaan and Israel as well as the eras following the establishment of Christianity. Apart from his work in textual studies, W. Harold Mare will be remembered for his excavations of Abila of the Decapolis in Jordan,

yet he also published a study of the archaeology of Jerusalem. Thus the title of this volume is ambiguous enough to allow a broad spectrum of topics relative to either side of the River Jordan.

The dwelling is a central setting in people's everyday life. People use their dwelling and residential environment for a large variety of activities and purposes. The Meaning of Activities in the Dwelling and Residential Environment

systematically relates activities, settings and meanings to improve the insight into people-environment relations which is called a meaning structure approach. Over 600 people, living in either a city centre, suburban or rural type of residential environment were asked about their everyday activities and the meanings thereof. The results show that meanings are important for the way in which people use their dwelling and residential environment. The meaning structure approach allows for a high level of aggregation identifying general meanings of

the dwelling, such as a place to be together with family and friends. It also allows for a low level of aggregation, for example, using internet at home has for many people become part of everyday life, providing them with easy access to a wide range of information. This illustrates the usefulness of meaning structures as a tool for investigating people-environment relations.

The book "Progress in Carotenoid Research" presents an authoritative and

comprehensive overview of the biology, biochemistry, and chemistry of carotenoids. Divided into 14 discrete parts, this book covers topics on basic science and applied technology of carotenoid molecules. This book provides an insight into future developments in each field and has an extensive bibliography. It will be an essential resource for researchers and academic and industry professionals in the natural pigment field.

With their rich traditions of conflict resolution and peacemaking, the Pacific

Islands provide a fertile environment for developing new approaches to crime and conflict. Interactions between formal justice systems and informal methods of dispute resolution contain useful insights for policy makers and others interested in socially attuned resolutions to the problems of order that are found increasingly in the Pacific Islands as elsewhere. Contributors to this volume include Pacific Islanders from Vanuatu, Fiji, the Solomon Islands, Papua New Guinea including Bougainville, as well as outsiders with a longstanding

interest in the region. They come from a variety of backgrounds and include criminal justice practitioners, scholars, traditional leaders and community activists. The chapters deal with conflict in a variety of contexts, from interpersonal disputes within communities to large-scale conflicts between communities. This is a book not only of stories but also of practical models that combine different traditions in creative ways and that offer the prospect of building more sustainable resolutions to crime and conflict.

Legality is a profound work in analytical jurisprudence, the branch of legal philosophy which deals with metaphysical questions about the law. In the twentieth century, there have been two major approaches to the nature of law. The first and most prominent is legal positivism, which draws a sharp distinction between law as it is and law as it might be or ought to be. The second are theories that view law as embedded in a moral framework. Scott Shapiro is a positivist, but one who tries to bridge the differences between the two approaches. In *Legality*, he shows how law can be thought of as a set of plans to achieve complex human

goals. His new "planning" theory of law is a way to solve the "possibility problem", which is the problem of how law can be authoritative without referring to higher laws.

Nutritional Composition and Antioxidant Properties of Fruits and Vegetables provides an overview of the nutritional and anti-nutritional composition, antioxidant potential, and health benefits of a wide range of commonly consumed fruits and vegetables. The

book presents a comprehensive overview on a variety of topics, including inflorescence, flowers and flower buds (broccoli, cauliflower, cabbage), bulb, stem and stalk (onion, celery, asparagus, celery), leaves (watercress, lettuce, spinach), fruit and seed (peppers, squash, tomato, eggplant, green beans), roots and tubers (red beet, carrots, radish), and fruits, such as citrus (orange, lemon, grapefruit), berries (blackberry, strawberry, lingonberry, bayberry,

blueberry), melons (pumpkin, watermelon), and more. Each chapter, contributed by an international expert in the field, also discusses the factors influencing antioxidant content, such as genotype, environmental variation and agronomic conditions. Contains detailed information on nutritional and anti-nutritional composition for commonly consumed fruits and vegetables. Presents recent epidemiological information on the health benefits of fresh produce. Provides in-depth information about the antioxidant properties of a range of fruits and vegetables.

Resources in Education FEMA This fully updated second edition is a practical guide for parents, teachers and other professionals to create cultures of resilience and wellbeing in schools, homes and health care settings. Students will build lifelong competencies to improve their emotional regulation, empathy, persistence, problem solving, mindset, optimism, gratitude, kindness and values; improving their psychological readiness to

bounce back from life's ups and downs. Alongside new lesson plans that are even easier to follow and specific guidance on how to meet criteria on social emotional learning frameworks, the lively and engaging resources in this book include:

Biogenic amines have been known for some time. These compounds are found in varying concentrations in a wide range of foods (fish, cheese, meat, wine, beer, vegetables, etc.) and their formations are influenced by different factors associated to those foods (composition, additives, ingredients, storage, microorganism, packaging, handling, conservation, etc.). The intake of foods containing high concentrations of biogenic amines can present a health hazard. Additionally, they have been used to establish indexes in various foods in order to signal the degree of freshness and/or deterioration of food. Nowadays,

there has been an increase in the number of food poisoning episodes in consumers associated with the presence of these biogenic amines, mainly associated with histamines. Food safety is one of the main concerns of the consumer and safety agencies of different countries (EFSA, FDA, FSCJ, etc.), which have, as one of their main objectives, to control these biogenic amines, principally histamine, to assure a high level of food safety. Therefore, it is necessary to deepen our understanding of the formation, monitoring and reduction of biogenic amines during the development, processing and storage of food, even the effect of biogenic amines in consumers after

digestion of foods with different levels of these compounds. With this aim, we are preparing a Special Issue on the topic of "Biogenic Amines in Food Safety", and we invite researchers to contribute original and unpublished research articles and reviews articles that involve studies of biogenic amines in food, which can provide an update to our knowledge of these compounds and their impacts on food quality and food safety.

This book is a truly comprehensive, timely, and very much needed treatise on the conceptualization of analysis, and design of contactless & multimodal sensor-based human activities, behavior understanding & intervention. From an interaction design perspective, the book provides views and methods that allow for more safe, trustworthy, efficient, and more natural interaction with technology that will be embedded in our daily living environments. The chapters in this book cover

sufficient grounds and depth in related challenges and advances in sensing, signal processing, computer vision, and mathematical modeling. It covers multi-domain applications, including surveillance and elderly care that will be an asset to entry level and practicing engineers and scientists. Intention, Rhetoric and Implementation Mark Twain Media

As a psychotherapist who focuses on working with the issues that challenge midlife and older men, Robert Schwalbe feels that the 60s and beyond can be the most rewarding or the most miserable period in a man's life. An aging male boomer looking at 60 encounters very specific psychological and physical changes. The impact of these changes can be felt in

relationship to others and in how a man sees himself in his world. Does he continue to fit in? In particular, how a man adapts to being in his 60s is an indicator of how he feels about living the rest of his life. Dr. Schwalbe knows from personal experience, as well as from his patients, the challenges produced by anxiety and depression in dealing with aging in a youth-oriented society. He looks at competition in the gym, sports field, financial and business arena, the political world to the social and sexual world and urges men to adapt to the outside forces. The key is in the expectations and how to recognize and plan for them. Candid and straightforward talk with vignettes drawn from Dr. Schwalbe's practice illustrate problems and solutions related to marriage, relationships, career, retirement (don't, he urges), divorce, death of a partner, fitness, nutrition, sexual behavior, dealing with adult children, lifestyle changes, financial planning, ageism, and many other topics. Schwalbe presents a heart-felt and therapeutically tested guide to keeping things in perspective in order to maintain self confidence and self esteem. Most

importantly, this book is directed to the aging male baby boomer (and to those who love him, know him, or live with him). It tells him that he is not alone and that the intimate thoughts that he has about his aging body and mind are shared by millions of men who are in their 60s and are dealing with their new age.
