In recent years, we have witnessed change in organizational accountability, especially toward investment in people, programs, projects, and processes. Project sponsors and those who have responsibility for project success have always been concerned about the value of their initiatives. Today this concern translates into financial impact—the actual monetary contribution from a project or program. Although monetary value is becoming a critical concern, it is the comparison of this value with the project costs that captures stakeholders' attention—and

translates into ROI. Show me the money" is the familiar response from individuals asked to invest (or continue to invest) in organizational efforts. At times, this response is appropriate. At other times, it may be misguided; measures not subject to monetary conversion are also important, if not critical, to most projects. However, excluding the monetary component from a success profile is unacceptable in this age of the "show me" generation. The monetary value is often required before a project is approved. Sometimes, it is needed as the project is being designed and developed. Other times, it is needed after project implementation. This issue is

compounded by concern that most projects today fail to live up to expectations. A systematic process is needed that can identify barriers to and enablers of success and can drive organizational improvements. The challenge lies in doing it—developing the measures of value, including monetary value, when they are needed and presenting them in a way so that stakeholders can use them

This book addresses an important issue -- the nature of and evidence for success in the transfer costing of internal services or shared services or products within a company. The case of activity-based costing (ABC) is used to explore how the proponents have developed a framework linking Quality, Cost and Delivery (QCD) components of products

and services. The QCD performance indices, which are the natural properties of products and services, will form part of the Service Level Agreements between the internal service providers (Shared Services Centers) and internal customers (Profit Centers) of the company. This framework optimizes the use of overhead expenses to the end products of the company. This book also discusses the various cost components of the

products and services using the full absorption costing principle. It is a revolutionary idea in the sense that all activity costs are considered variable costs and product costs come from activity costs using various cost drivers. The Principal Component Analysis (PCA), the multi-variate statistical tool, is applied using SPSS to analyze which independent variables contribute significantly to the Product Unit Price (PUP) and

which should be given more emphasis in decision making process.

“An Industrial Product-Service System is characterized by the integrated and mutually determined planning, development, provision and use of product and service shares including its immanent software components in Business-to-Business applications and represents a knowledge-intensive socio-technical system.” – Meier, Roy, Seliger (2010) Since the first conference in 2009, the

CIRP International Conference on Industrial Product-Service Systems has become a well-established international forum for the review and discussion of advances, research results and industrial improvements. Researchers from all over the world have met at previous IPS2 conferences in Cranfield (2009), Linköping (2010), Braunschweig (2011) and Tokyo (2012). In 2013, the 5th CIRP International Conference on Industrial Product-Service Systems is

held in Bochum. Important topics of IPS2 research presented at the conference are: planning and development, sustainability, business models, operation, service engineering, knowledge management, ICT, modeling and simulation, marketing and economic aspects as well as the role of the human in IPS2.

We are pleased to present this Global Edition, which has been developed specifically to acquaint students of business with the fundamental tools of managerial accounting and to promote their

understanding of the dramatic ways in which business is changing. The emphasis is on teaching students to use accounting information to best manage an organization. Each chapter is written around a realistic business or focus company that guides the reader through the topics of that chapter. There is significant coverage of contemporary topics such as activity-based costing, target costing, the value chain, customer profitability analysis, and throughput costing while also including

traditional topics such as job-order costing, budgeting, and performance evaluation. Many of the real-world examples in the Management Accounting Practice boxes have been revised and updated to make them more current and several new examples have been added. This Global Edition has been adapted to meet the needs of courses outside the United States and does not align with the instructor and student resources available with the U.S. edition.

Professional Praise for Performance Management "We are witnessing a convergence among advanced management concepts and practices. Performance management is a means to pull it all together, to understand the strengths and limitations of each management practice and leverage it for competitive advantage. Cokins' book walks us through all this in a manner that makes something

confusing much less so. There is no one right answer for any situation. The answer lies in a balance of concepts and the integration of them. Performance Management is the glue that holds them all together. This book helps the reader understand the breadth of PM. It's not just about measuring!" —John F. Morrow, CPA, AICPA Vice President, The New Finance "Gary Cokins has articulated the '411' of performance management.

His combination of personal anecdotes with fundamental cost and performance management theories provides business leaders at all levels, in any industry or profession, a solid resource for practicing their work. This book is not only an invaluable resource for those new to performance management but provides guidance, wisdom, support, and insight to all industry leaders and managers. Cokins has organized and simplified

the many complex performance management theories, associated tools, and infrastructure for the reader. Buy it, read it, and give it to your colleagues—then celebrate your successes!" —Sue Swertfeger, Senior Manager, Owens & Minor

This book illustrates the importance of effective cost management systems in providing a supportive environment in which reliable and relevant management

information can be generated. Such a cost management system is only attainable if the importance of key business, operational and stakeholder requirements are recognised within the organisational context. In illustrating this importance, this book provides several case studies as examples thereof. The first two case studies focus on the engineering sector and illustrate the development of a cost management system in a water recycling context; and the design of a budgetary system in a mining engineering context. The remaining case studies focus on the services sector, including cost

management systems for a digital technology services provider and a medical insurance services provider; an alternative activity-based costing approach for a public sector services provider; and finally a re-designed value stream for an automotive services provider. Academic researchers and industry managers in the fields of management accounting and financial management, as well as engineering and operations management, will find value in the experiences described herein.
