Seminar paper from the year 2005 in the subject Business economics - Accounting and Taxes, grade: 1,6, Lancaster University, course: Management Accounting, 10 entries in the bibliography, language: English, abstract: In this report I will show how activity-based costing (ABC) can be applied to a department of a major institution such as a University. Large universities may maintain and follow complex and rigid accounting systems. However, the systems are almost always based on a form of fund accounting and are intended to satisfy legal and donor stipulations rather than to provide information for

administrative decisions. In this report I show how activity-based costing (ABC) can be applied to institutions of higher education and, I believe, can result in improved information of benefit to academic administrators, legislators, voters and consumers. The report also analyses an example related to the degree at the university which follows with the appropriateness of using this system by the university. The Advantages and Disadvantages of activity-based costing are also investigated in this report and therefore, will provide a disclosure for the University board in terms of the usage of ABC.

compliance is rising. For many, however, the field of environmental management (including ISO 14000) is full of unfamiliar terms, high learning curves, unproductive approaches, much frustration, and often little action. If environmental management is to become widely accepted and self-motivated in industry, it must connect to the basic motivators for business: increased competitiveness and profitability. Activity-Based Cost And Environmental Management: A Different Approach to the ISO 14000 Compliance demonstrates how environmental assessment and management can be performed based upon familiar principles: cost accounting and cost management. Specifically, this book describes how the well-established Activity-Based Costing and Management principles can be extended with non-monetary environmental dimensions.

The result is a single, integrated framework called Activity-Based Cost and Environmental Management that provides the tools and abilities to do both environmental management and cost management in an integrated manner and according to modern management principles. This integration of economic and environmental dimensions based upon familiar cost accounting and management principles makes it easier for decision-makers to not only include the environment in their decision-making, but also to identify, rank and prioritize opportunities for win-win situations where competitiveness is increased and environmental impact reduced at the same time. In this book, the basic concepts of Activity-Based Cost and Environmental Management are described, as well as how to make your own integrated Activity-Based Cost and

Among others, the book includes chapters on environmental management and Activity-Based Costing, as well as several real-life case studies from companies for which the authors implemented Activity-Based Cost and Environmental Management systems.

In the classroom, ABC looks like a great way to manage a company ' s resources. But many executives who have tried to implement ABC on a large scale in their organizations have found the approach limiting and frustrating. Why? The employee surveys that companies used to estimate resources required for business activities proved too time-consuming, expensive, and irritating to employees. This book shows you how to implement time-driven activity-based costing (TDABC), an easier and more powerful way to implement ABC. You can now estimate directly the resource demands imposed by each business transaction, product, or

customer. The payoff? You spend less time and money obtaining and maintaining TDABC data—and more time addressing problems that TDABC reveals, such as inefficient processes, unprofitable products and customers, and excess capacity. The authors also show how to use TDABC to link strategic planning to operational budgeting, to enhance the due diligence process for mergers and acquisitions, and to support continuous improvement activities such as lean management and benchmarking. In presenting their model, the authors define the two questions required to build TDABC: 1) How much does it cost per time unit to supply resource capacity for each business process? 2) How much resource capacity (time) is required to perform work for a company ' s many transactions, products, and customers? The book demonstrates how to develop simple, valid answers to these two questions. Kaplan and Anderson illustrate the TDABC approach with a wealth of case studies, in diverse settings, based
