Think Complexity Cambridge University Press

The purpose of this book is to give background for those who would like to delve into some higher category theory. It is not a primer on higher category theory itself. It begins with a paper by John Baez and Michael Shulman which explores informally, by analogy and direct connection, how cohomology and other tools of algebraic topology are seen through the eyes of n -category theory. The idea is to give some of the motivations behind this subject. There are then two survey articles, by Julie Bergner and Simona Paoli, about (infinity,1) categories and about the algebraic modelling of homotopy n -types. These are areas that are particularly well understood, and where a fully integrated theory exists. The main focus of the book is on the richness to be found in the theory of bicategories, which gives the essential starting point towards the understanding of higher categorical structures. An article by Stephen Lack gives a thorough, but informal, guide to this theory. A paper by Larry Breen on the theory of gerbes shows how such categorical structures appear in differential geometry. This book is dedicated to Max Kelly, the founder of the Australian school of category theory, and an historical paper by Ross Street describes its development.

New Additional Mathematics Cambridge University Press

This book has been developed especially to meet the requirements of the new UCIE O Level syllabus, 5014, and the IGCSE syllabus, 0680, for Environmental Management. Environmental Management is a subject highly relevant in the modern context, where the Earth's resources and life-sustaining systems are under threat of human impact. The aim is to enable students to understand and appreciate the interdependence of the Earth's natural systems and learn to best manage them for the future. The book, following the sequence of the syllabus, has four main chapters: * Lithosphere * Hydrosphere * Atmosphere * Biosphere These are further subdivided into units that cover the essential aspects of each under four main headings: * Resources * Development * Impact * Management The scope of the book is international in its approach, albeit with a focus on South Asia. The text is supported by tables, graphs and diagrams, and complemented by appropriately selected four-colour illustrations. Case studies give students a local as well as global perspective on ecological problems and their possible solutions. We all know the basics of punctuation. Or do we? A look at most neighborhood signage tells a different story. Through sloppy usage and low standards on the internet, in email, and now text messages, we have made proper punctuation an endangered species. In Eats, Shoots & Leaves, former editor Lynne Truss dares to say, in her delightfully urbane, witty, and very English way, that it is time to look at our commas and semicolons and see them as the wonderful and necessary things they are. This is a book for people who love punctuation and get upset when it is mishandled. From the invention of the question mark in the time of Charlemagne to George Orwell shunning the semicolon, this lively history makes a powerful case for the preservation of a system of printing conventions that is much too subtle to be mucked about with.
