From the author of *The Diviners* series comes the first installment of the Gemma Doyle Trilogy – a dark and eerie supernatural period drama. It's 1895, and after the death of her mother, 16-year-old Gemma Doyle is shipped off from the life she knows in British India to Spence Academy, a proper boarding school in England. Lonely, guilt-ridden, and prone to visions of the future that have an uncomfortable habit of coming true, Gemma's reception at Spence is a chilly one. To make things worse, she's being followed by a mysterious young Indian man who has been sent to watch her. But why? What is her destiny? And what will her entanglement with Spence's most powerful girls – and their foray into the spiritual world – lead to?

Outwardly, we live in an era that appears more open-minded, non-judgemental and tolerant than in any time in human history. The very term intolerant invokes moral condemnation. We are constantly reminded to understand the importance of respecting different cultures and diversities. In this pugnacious new book, Frank Furedi argues that despite the democratisation of public life and the expansion of freedom, society is dominated by a culture that not only tolerates but often encourages intolerance. Often the intolerance is directed at people who refuse to accept the conventional wisdom and who are stigmatised as 'deniers'. Frequently intolerance comes into its own in clashes over cultural values and lifestyles. People are condemned for the food they eat, how they parent and for wearing religious symbols in public. This book challenges the 'quiet mood of tolerance' towards morally stigmatised forms of behaviour. The author examines recent forms of 'unacceptable behaviour'. It will tease out the real motives and drivers of intolerance.

Accountants have historically had an important role in the detection and deterrence of fraud. As Joe Wells' *Principles of Fraud Examination* 4th edition illustrates, fraud is much more than numbers; books and records don't commit fraud – people do. Widely embraced by fraud examination instructors across the country, *Principles of Fraud Examination*, 4th Edition, by Joseph Wells, is written to provide a broad understanding of fraud to today's accounting students – what it is and how it is committed, prevented, detected, and resolved. This 4th edition of the text includes a chapter on frauds perpetrated against organizations by individuals outside their staff—a growing threat for many entities as commerce increasingly crosses technological and geographical borders.

Winner of the Pulitzer Prize "A masterwork . . . the novel astonishes with its inventiveness . . . it is nothing less than a grand comic fugue."—The New York Times Book Review A Confederacy of Dunces is an American comic masterpiece. John Kennedy Toole's hero, one Ignatius J. Reilly, is "huge, obese, fractious, fastidious, a latter-day Gargantua, a Don Quixote of the French Quarter. His story bursts with wholly original characters, denizens of New Orleans' lower depths, incredibly true-to-life dialogue, and the zaniest series of high and low comic adventures" (Henry Kisor, Chicago Sun-Times).

Where is God in the universe if anywhere? Why did God make germs? Why should we be so special? Could the universe have been different? This is a book that brings home, in no uncertain fashion, the discrepancy between the universe envisaged by the ancient sages and prophets and that of modern scientific cosmology, where the possibility of divine intervention looks less and less likely. Butchins demonstrates with clarity how the scientific method may be used, despite certain drawbacks, in an attempt to verify objective truth. It describes how the effect of the Copernican Revolution in the seventeenth century has steadily undermined the basic structure of the three great monotheistic religions of our day, Judaism, Christianity, and Islam, especially with respect to their eschatological concepts. The Eastern religions, being less anthropomorphic, are less affected. The theistic argument from design is shown to be powerful enough to have caused disagreement among present-day scientists, in spite of the strictures of Professor Dawkins. In general, the book attempts to make some sense of the structure of the universe in terms of our own consciousness; it behoves the reader to consider the

Flaming Arrow's People

Why have there been no terrorist attacks in the United States since 9/11? It is ridiculously easy for a single person with a bomb-filled backpack, or a single explosives-laden automobile, to launch an attack. So why hasn't it happened? The answer is surely not the Department of Homeland Security, which cannot stop terrorists from entering the country, legally or otherwise. It is surely not the Iraq war, which has stoked the hatred of Muslim extremists around the world and wasted many thousands of lives. Terrorist attacks have been regular events for many years -- usually killing handfuls of people, occasionally more than that. Is it possible that there is a simple explanation for the peaceful American homefront? Is it possible that there are no al-Qaeda terrorists here? Is it possible that the war on terror has been a radical overreaction to a rare event? Consider: 80,000 Arab and Muslim immigrants have been subjected to fingerprinting and registration, and more than 5,000 foreign nationals have been imprisoned -- yet there has not been a single conviction for a terrorist crime in America. A handful of plots -- some deadly, some intercepted -- have plagued Europe and elsewhere, and even so, the death toll has been modest. We have gone to war in two countries and killed tens of thousands of people. We have launched a massive domestic wiretapping program and created vast databases of information once considered private. Politicians and pundits have berated us about national security and patriotic duty, while encroaching our freedoms and sending thousands of young men off to die. It is time to consider the hypothesis that dare not speak its name: we have wildly overreacted. Terrorism has been used by murderous groups for many decades, yet even including 9/11, the odds of an American being killed by international terrorism are microscopic. In general, international terrorism doesn't do much damage when considered in almost any reasonable context. The capacity of al-Qaeda or of any similar group to do damage in the United States pales in comparison to the capacity other dedicated enemies, particularly international Communism, have possessed in the past. Lashing out at the terrorist threat is frequently an exercise in self-flagellation because it is usually more expensive than the terrorist attack itself and because it gives the terrorists exactly what they are looking for. Much, probably most, of the money and effort expended on counterterrorism since 2001 (and before, for that matter) has been wasted. The terrorism industry and

its allies in the White House and Congress have preyed on our fears and caused enormous damage. It is time to rethink the entire enterprise and spend much smaller amounts on only those things that do matter: intelligence, law enforcement, and disruption of radical groups overseas. Above all, it is time to stop playing into the terrorists' hands, by fear-mongering and helping spread terror itself.
