The Problem with Survey Research makes a case against survey research as a primary source of reliable

information. George Beam argues that all survey research instruments, all types of asking—including polls, face-to-face interviews, and focus groups—produce unreliable and potentially inaccurate results. Because those who rely on survey research only see answers to questions, it is impossible for them, or anyone else, to evaluate the results. They cannot know if the answers correspond to respondents' actual behaviors (objective phenomena) or to their true beliefs and opinions (subjective phenomena). Reliable information can only be acquired by observation, experimentation, multiple sources of data, formal model building and testing, document analysis, and comparison. In fifteen chapters divided into six parts—Ubiquity of Survey Research, The Problem, Asking Instruments, Asking Settings, Askers, and Proper Methods and Research Designs—The Problem with Survey Research demonstrates how asking instruments, settings in which asking and answering take place, and survey researchers themselves skew results and thereby make answers unreliable. The last two

chapters and appendices examine observation, other methods of data collection and research designs that may produce accurate or correct information, and shows how reliance on survey research can be overcome, and must be.

In August 2009, former madam Dalia Dippolito conspired with a hit man to arrange her ex-con husband's murder. Days later, it seemed as if all had gone according to plan. The beautiful, young Dalia came home from her health club to an elaborate crime scene, complete with yellow tape outlining her townhome and police milling about. When Sgt. Frank Ranzie of the Boynton Beach, Florida, police informed her of her husband Michael's apparent murder, the newlywed Dippolito can be seen on surveillance video collapsing into the cop's arms, like any loving wife would—or any wife who was

pretending to be loving would. The only thing missing from her performance were actual tears. ... And the only thing missing from the murder scene was an actual murder. Tipped off by one of Dalia's lovers, an undercover detective posing as a hit man met with Dalia to plot her husband's murder while his team planned, then staged the murder scenario—brazenly inviting the reality TV show *Cops* along for the ride. The *Cops* video went viral, sparking a media frenzy: twisted tales of illicit drugs, secret boyfriends, sex-for-hire, a cuckolded former con man, and the defense's ludicrous claim that the entire hit had been staged by the intended victim for reality TV fame. In *Poison Candy*, case prosecutor Elizabeth Parker teams with bestselling crime writer Mark Ebner to take you behind and beyond the courtroom scenes with astonishing never-before-revealed facts, whipsaw plot twists, and exclusive photos and details far too lurid for

the trial that led to 20 years in state prison for Dalia Dippolito.

This book contains state-of-the-art contributions in the field of evolutionary and deterministic methods for design, optimization and control in engineering and sciences. Specialists have written each of the 34 chapters as extended versions of selected papers presented at the International Conference on Evolutionary and Deterministic Methods for Design, Optimization and Control with Applications to Industrial and Societal Problems (EUROGEN 2013). The conference was one of the Thematic Conferences of the European Community on Computational Methods in Applied Sciences (ECCOMAS). Topics treated in the various chapters are classified in the following sections: theoretical and numerical methods and tools for optimization (theoretical methods and tools; numerical

methods and tools) and engineering design and societal applications (turbo machinery; structures, materials and civil engineering; aeronautics and astronautics; societal applications; electrical and electronics applications), focused particularly on intelligent systems for multidisciplinary design optimization (mdo) problems based on multi-hybridized software, adjoint-based and one-shot methods, uncertainty quantification and optimization, multidisciplinary design optimization, applications of game theory to industrial optimization problems, applications in structural and civil engineering optimum design and surrogate models based optimization methods in aerodynamic design.
