Learn After Effects Scripts After Effects scripts are coded tools to automate processes that would be too tedious to do manually, such as bulk renaming layers, shifting certain shape layers, importing text from a spreadsheet file, or organizing your project structure. In essence, scripts can do the manual tasks you can do, except faster. It cannot do things you cannot do yourself, (plugins, which are basically individual software within After Effects, can do this). In this article, I will point you to all the resources you'll need to get started with scripting for Adobe products, specifically After Effects. scripting without having any knowledge of programming, so the learning curve was pretty steep. If you're familiar with programming at all, even if you've taken a single intro course in school, you should be more than sufficient. Adobe apps use a language called ExtendScript, which is just a modified version of JavaScript, so if you're into web development, you should feel right at home. The process is not that vigorous once you have the fundamental

programming concepts down, like arrays, objects, functions, recursions, etc. Best of luck on your scripting adventures. After Effects scripts, like expressions, can be intimidating. The code nature of these functions is often enough to make creative professionals shy away ("I'm a motion designer, not a programmer!") -- but don't be afraid! When you start to understand the fundamentals of scripts in After Effects you'll see that it's not as complicated as you may have assumed. This BOOK will help get you started.
