The definitive story of American health care today—its causes, consequences, and confusions In March 2010, the Affordable Care Act was signed into law. It was the most extensive reform of America's health care system since at least the creation of Medicare in 1965, and maybe ever. The ACA was controversial and highly political, and the law faced legal challenges reaching all the way to the Supreme Court; it even precipitated a government shutdown. It was a signature piece of legislation for President Obama's first term, and also a ball and chain for his second. Ezekiel J. Emanuel, a professor of medical ethics and health policy at the University of Pennsylvania who also served as a special adviser to the White House on health care reform, has written a brilliant diagnostic explanation of why health care in America has become such a divisive social issue, how money and medicine have their own—quite distinct—American story, and why reform has bedeviled presidents of the left and right for more than one hundred years. Emanuel also explains exactly how the ACA reforms are reshaping the health care system now. He forecasts the future, identifying six mega trends in health that will determine the market for health care to 2020 and beyond. His predictions are bold, provocative, and uniquely well-informed. Health care—one of America's largest employment sectors, with an economy the size of the GDP of France—has never had a more comprehensive or authoritative interpreter.

Accounting is the discipline with the oldest historical culture, being the first to be recognized by humanity when Adam and Eve were made to account for what they did in paradise. It is also the only discipline that will come into play in the Hereafter, where everybody would be raised up as an accountant - to account for all they have done during their life time on earth! Accounting is a service-providing discipline, with a rich theoretical background, which makes available information (especially financial) to guide various decision-making processes. Business owners, creditors, managers, prospective investors, government and its agencies, employees and even the general public seek accounting

Experience is making a comeback. Learn how to repurpose your wisdom. At age 52, after selling the company he founded and ran as CEO for 24 years, rebel boutique hotelier Chip Conley was looking at an open horizon in midlife. Then he received a call from the young founders of Airbnb, asking him to help grow their disruptive start-up into a global hospitality giant. He had the industry experience, but Conley was lacking in the digital fluency of his 20-something colleagues. He didn't write code, or have an Uber or Lyft app on his phone, was twice the age of the average Airbnb employee, and would be reporting to a CEO young enough to be his son. Conley quickly discovered that while he'd been hired as a teacher and mentor, he was also in many ways a student and intern. What emerged is the secret to thriving as a mid-life worker: learning to marry wisdom and experience with curiosity, a beginner's mind, and a willingness to evolve, all hallmarks of the "Modern Elder." In a world that venerates the new, bright, and shiny, many of us are left feeling invisible, undervalued, and threatened by the "digital natives" nipping at our heels. But Conley argues that experience is on the brink of a comeback. Because at a time when power is shifting younger, companies are finally waking up to the value of the humility, emotional intelligence, and wisdom that come with age. And while digital skills might have only the shelf life of the latest fad or gadget, the human skills that mid-career workers possess—like good judgment, specialized knowledge, and the ability to collaborate and coach - never expire. Part manifesto and part playbook, Wisdom@Work ignites an urgent conversation about ageism in the workplace, calling on us to treat age as we would other type of diversity. In the process, Conley liberates the term "elder" from the stigma of "elderly," and inspires us to embrace wisdom as a path to growing whole, not old. Whether you've been forced to make a mid-career change, are choosing to work past retirement age, or are struggling to keep up with the millennials rising up the ranks, Wisdom@Work will help you write your next chapter.

In the past few decades, personality psychology has made considerable progress in raising new questions about human nature—and providing some provocative answers. New scientific research has transformed old ideas about personality based on the theories of Freud, Jung, and the humanistic psychologies of the nineteen sixties, which gave rise to the simplistic categorizations of the Meyer-Briggs Inventory and the 'enneagram'. But the general public still knows little about the new science and what it reveals about who we are. In this book, Brian Little, one of the psychologists who helped re-shape the field, provides the first in-depth exploration of the new personality science and its provocative findings for general readers. The book explores questions that are rooted in the origins of human consciousness but are as commonplace as yesterday's breakfast conversation. Are our first impressions of other people's personalities usually fallacious? Are creative individuals essentially maladjusted? Are our personality traits, as William James put it "set like plaster" by the age of thirty? Is a belief that we are in control of our lives an unmitigated good? Do our singular personalities comprise one unified self or a confederacy of selves, and if the latter, which of our mini-me-s do we offer up in marriage or mergers? Are some individuals genetically hard-wired for happiness? Which is the more viable path toward human flourishing, the pursuit of happiness or the happiness of pursuit? Little provides a resource for answering such questions, and a framework through which readers can explore the personal implications of the new science of

personality. Questionnaires and interactive assessments throughout the book facilitate self-exploration, and clarify some of the stranger aspects of our own conduct and that of others. Brian Little helps us see ourselves, and other selves, as somewhat less perplexing and definitely more intriguing. This is not a self-help book, but students at Harvard who took the lecture course on which it is based claim that it changed their lives.

The State of the World's Land and Water Resources for Food and Agriculture S. Chand Publishing
The State of the World's Land and Water Resources for Food and Agriculture is FAO's first flagship publication on the global status of land and water resources. It is an 'advocacy' report, to be published every three to five years, and targeted at senior level decision makers in agriculture as well as in other sectors. SOLAW is aimed at sensitizing its target audience on the status of land resources at global and regional levels and FAO's viewpoint on appropriate recommendations for policy formulation. SOLAW focuses on these key dimensions of analysis: (i) quantity, quality of land and water resources, (ii) the rate of use and sustainable management of these resources in the context of relevant socio-economic driving factors and concerns, including food security and poverty, and climate change. This is the first time that a global, baseline status report on land and water resources has been made. It is based on several global spatial databases (e.g. land suitability for agriculture, land use and management, land and water degradation and depletion) for which FAO is the world-recognized data source. Topical and emerging issues on land and water are dealt with in an integrated rather than sectoral manner. The implications of the status and trends are used to advocate remedial interventions which are tailored to major farming systems within different geographic regions.

The New York Times bestselling, groundbreaking investigation of how the global elite's efforts to "change the world" preserve the status quo and obscure their role in causing the problems they later seek to solve. An essential read for understanding some of the egregious abuses of power that dominate today 's news. Former New York Times columnist Anand Giridharadas takes us into the inner sanctums of a new gilded age, where the rich and powerful fight for equality and justice any way they can—except ways that threaten the social order and their position atop it. We see how they rebrand themselves as saviors of the poor; how they lavishly reward "thought leaders" who redefine "change" in winner-friendly ways; and how they constantly seek to do more good, but never less harm. We hear the limousine confessions of a celebrated foundation boss; witness an American president hem and haw about his plutocratic benefactors; and attend a cruise-ship conference where entrepreneurs celebrate their own self-interested magnanimity. Giridharadas asks hard questions: Why, for example, should our gravest problems be solved by the unelected upper crust instead of the public institutions it erodes by lobbying and dodging taxes? He also points toward an answer: Rather than rely on scraps from the winners, we must take on the grueling democratic work of building more robust, egalitarian institutions and truly changing the world. A call to action for elites and everyday citizens alike.
