Evolution of U.S. Regulation and the Standard-Setting Process for Financial Reporting: 1930s to the Present

surveys and explains the evolution of the stream of events and developments in the regulation and standard setting that have set the requirements for companies' financial reporting in the U.S. capital market.

Particular attention is given to instances in which the SEC, as regulator, has either been in disagreement with the private-sector accounting standard setter, or where they both have partnered in a solution. Attention is also given to some of the more celebrated attempts by self-interested parties, particularly the

company sector, to interpose themselves forcefully into the standard-setting process. The interventions from members of Congress on behalf of the company sector are also the object of study. In this rendering of the evolution, the author has endeavored to provide extensive references to the published literature to enable readers to study the events and developments in greater depth.

Two significant complications affect the taxation of property transactions. The first complication is the special treatment of capital gains and losses. The second complication arises from the time value of money. This book aims to provide students with an appreciation for these two significant complexities through the descriptive materials and problems presented. Chapter 1 introduces the concepts of basis and realization that are fundamental to the taxation of all transactions involving property. Chapter 2 follows with the effects of taxing gains and losses from capital assets differently from ordinary gains and losses. Chapter 3 deals with liabilities, which are essentially the opposite of assets or property, so that they can be considered negative property. Chapter 4 covers the

rules applicable to the capitalization of costs incurred in the creation or acquisition of property and the recovery of those costs through a variety of expensing, amortization, and depreciation provisions. Chapter 5 covers non-recognition transactions (other than transfers involving partnerships, corporations or trusts) in which gain or loss is not recognized on disposition but is deferred through the mechanism of substituted basis. Chapter 6 deals with deferred compensation issues and other special problems arising in executive compensation arrangement using employer stock or stock options that reflect the lure of capital gain treatment. Chapter 7 covers the complexities that arise from the cliché that property is a bundle of rights, particularly when the ownership and long-term right to possession is divided under a lease or similar arrangement. Finally, Chapter 8 covers a number of special provisions that affect the deductibility of losses, including the wash sales rules, limitations on related party transactions, the at-risk and passive loss rules, and losses arising in certain leasing transactions. "Operational Culture for the Warfighter: Principles and Applications" is a comprehensive planning tool and reference. It addresses the critical need of the Marine Corps to provide operationally relevant cultural teaching, training, and analysis. This book links social science paradigms to the needs of Marines using an applied anthropology approach. The text explains how fundamental features of culture (environment, economy, social structure, political structure, and belief systems) can present challenges for military operations in different cultures around the globe. Drawing on the research and field experiences of Marines themselves, "Operational Culture for the Warfighter" uses case studies from past and present cross-cultural problems to illustrate the application of cultural principles to the broad

expeditionary spectrum of today's and tomorrow's Marine Corps. This new and expanded second edition of "Operational Culture for the Warfighter" extends the concepts of the original edition to the Marine Corps Planning Process. New sections on transportation and communication, law and ethics, and culture and planning will assist both military planners and operators with the practical aspects of incorporating culture into military decision-making.

The 1980s have witnessed a tremendous growth in the field of computer integrated manufacturing systems. The other major areas of development have been computer-aided design, computer-aided manufacturing, industrial robotics, automated assembly, cellular and modular material handling, computer networking and office automation to name just a few. These new technologies are generally capital intensive and do not conform to traditional cost structures. The net result is a tremendous change in the way costs should be estimated and economic

analyses performed. The majority of existing engineering economy texts still profess application of traditional analysis methods. But, as was mentioned above, it is clear that the basic trend in manufacturing industries is itself changing. So it is quite obvious that the practice of traditional economic analysis methods should change too. This book is an attempt to address the various issues associated with non-traditional methods for evaluation of advanced computer-integrated technologies. This volume consists of twenty refereed articles which are grouped into five parts. Part one, Economic Justification Methods, consists of six articles. In the first paper, Soni et al. present a new classification for economic justification methods for advanced automated manufacturing systems. In the second, Henghold and LeClair look at strengths and weaknesses of expert systems in general and more specifically, an application aimed at investment justification in advanced technology. The third paper, by Carrasco and Lee, proposes an enhanced economic methodology to improve the needs analysis, conceptual design and detailed design activities associated with technology modernization.

This book will focus on the up-front activities required for product and service differentiation, the learning methodologies that contribute to arriving at that differentiation, and the role that technology plays in implementing the process. The book will show how technology factors into such entrepreneurial activities as engaging in business planning and utilizing creativity and innovation, and how creative innovation, in turn, is achieved and enhanced through an understanding of two different modes of learning: "learning about" and "learning by doing". A successful product introduction depends on an efficient supply chain, a strong brand, and the ability of a manufacturer or provider to differentiate it successfully in the marketplace. New Product and Services Development demonstrates how differentiation, this last critical component, can be secured by the strategic use of technology and by engaging in two key learning methodologies.

The practice of building software is a "new kid on the block" technology. Though it may not

seem this way for those who have been in the field for most of their careers, in the overall scheme of professions, software builders are relative "newbies." In the short history of the software field, a lot of facts have been identified, and a lot of fallacies promulgated. Those facts and fallacies are what this book is about. There's a problem with those facts – and, as you might imagine, those fallacies. Many of these fundamentally important facts are learned by a software engineer, but over the short lifespan of the software field, all too many of them have been forgotten. While reading *Facts and Fallacies of Software Engineering*, you may experience moments of "Oh, yes, I had forgotten that," alongside some "Is that really true?" thoughts. The author of this book doesn't shy away from controversy. In fact, each of the facts and fallacies is accompanied by a discussion of whatever controversy envelops it. You may find yourself agreeing with

a lot of the facts and fallacies, yet emotionally disturbed by a few of them! Whether you agree or disagree, you will learn why the author has been called "the premier curmudgeon of software practice." These facts and fallacies are fundamental to the software building field – forget or neglect them at your peril!

A Field Guide for Cattle, Horses, Poultry and Swine McGraw Hill Professional
The approach used by Hoyle, Schaefer, and Douplik in the new edition allows students to think critically about accounting, just as they will do while preparing for the CPA exam and in their future careers. With this text, students gain a well-balanced appreciation of the Accounting profession. As Hoyle 12e introduces them to the field's many aspects, it often focuses on past controversies and present resolutions. The text continues to show the development of financial reporting as a product of intense and considered debate that continues today and into the future. The writing style of the eleven previous editions has been highly praised. Students easily comprehend chapter concepts because of the conversational

tone used throughout the book. The authors have made every effort to ensure that the writing style remains engaging, lively, and consistent which has made this text the market leading text in the Advanced Accounting market. The 12th edition includes an increased integration of IFRS as well as updated accounting standards.
