The administration of intravenous fluids is one of the most common and important therapeutic practices in the

treatment of surgical, medical and critically ill patients. The international literature accordingly contains a vast number of works on fluid management, yet there is still confusion as to the best options in the various situations encountered in clinical practice. The purpose of this volume is to help the decision-making process by comparing different solution properties describing their indications, mechanisms of action and side-effects according to physiologic body water distribution, electrolytic and acid-base balance, and to clarify which products available on the market represent the best choice in different circumstances. The book opens by discussing in detail the concepts central to a sound understanding of abnormalities in fluid and electrolyte homeostasis and the effect of intravenous fluid administration. In the second part of the monograph, these concepts are used to explain the advantages and disadvantages of solutions available on the market in different clinical settings. Body Fluid Management: From Physiology to Therapy will serve as an invaluable decision-making guide, including for those

who are not experts in the subject.

Each new print copy of PHTLS: Prehospital Trauma Life Support, Eighth Edition also includes Navigate 2 Advantage Access that unlocks a complete eBook and skills videos. PHTLS: Prehospital Trauma Life Support, Eighth Edition is the next step in the evolution of the premier global prehospital trauma education program. For three decades, PHTLS has improved the quality of trauma patient care and has saved lives. The eighth edition of PHTLS continues the PHTLS mission to promote excellence in trauma patient management by all providers involved in the delivery of prehospital care through global education. This legendary program was first developed by the National Association of Emergency Medical

Technicians (NAEMT) in the early 1980s in cooperation with the American College of Surgeons Committee on Trauma (ACS-COT). Its medical content is continuously revised and updated to reflect current, state-of-the-art knowledge and practice. PHTLS promotes critical thinking as the foundation for providing quality care. It is based on the belief that EMS practitioners make the best decisions on behalf of their patients when given a good foundation of knowledge and key principles. The eighth edition of PHTLS features a new chapter, Physiology of Life and Death. This chapter creates a solid understanding of the physiology of life and pathophysiology that can lead to death. This understanding is essential for the prehospital care provider if abnormalities are to be found and addressed quickly in the trauma patient. Clear Approach to Assessing a Trauma Patient In the field, seconds count. PHTLS teaches and reinforces the principles of rapidly assessing a trauma patient using an orderly approach, immediately treating life-threatening problems as they are identified, and minimizing any delays in initiating transport to an appropriate destination. Since the publication of the first edition in 1959, *Apley's System of Orthopaedics and Fractures* has been an essential textbook for those seeking to understand the structure and function of the musculoskeletal system, its diseases, and its response to trauma. As the leading textbook of modern orthopaedics for over 50 years, this book is a testament to the late Alan Apley's skills as a teacher, and the care and forethought he brought to the presentation of the content.

The current authors have developed and extended this foundation to produce a thoroughly modern textbook of orthopaedic surgery, bringing contemporary expertise while retaining the book's characteristic philosophy and approach. They are joined by a selection of expert contributors from around the world who provide added material on a wide variety of subjects— including radiology, open fractures, neuromuscular disorders, and inflammatory arthropathies. This ninth edition echoes its predecessors in following Apley's approach to the orthopaedic patient. As before, the work is divided into three sections: General Orthopaedics, Regional Orthopaedics, and Fractures and Joint Injuries. The material has been fully updated and revised and includes more than 1,000 illustrations. Apley's System's wide readership of practicing orthopaedic surgeons, postgraduate trainees and residents in orthopaedics and general surgery, A&E specialists, and physiotherapists is evidence of the authors' ability to instruct and inspire. The book is a truly fitting introduction to modern-day orthopaedics. Advanced Trauma Life Support Student Course Manual

In recognition of the importance of road safety as a major health issue, the World Health Organization has declared 2011-2021 the Decade of Safety Action. Several countries in Europe, North America, and Asia have been successful in reducing fatalities and injuries due to road traffic crashes. However, many low-income countries continue to experience high rates of traffic fatalities and injuries. *Transport Planning and Traffic Safety: Making Cities, Roads, and Vehicles Safer* offers a source book for road safety training courses as well as an introductory textbook for graduate-level courses on road safety taught in engineering institutes. It brings together the international experiences and lessons learned from countries which have been successful in reducing traffic crashes and their applicability in low-income countries. The content is based on lectures delivered during an international course on transportation planning and traffic safety, sponsored annually by the Transportation Research and Injury Prevention Programme (TRIPP) at the Indian Institute of Technology, Delhi. The book is interdisciplinary and aimed at professionals—traffic and road engineers, vehicle designers, law enforcers, and transport planners. The authors examine trends in performance of OECD countries and highlight the public health and systems approach of traffic safety with the vulnerable road user in focus. Topics include land use (transportation planning, mobility, and safety), safety education and legislation, accident analysis, road safety

research, human tolerance to injury, vehicle design, safety in construction zones, safety in urban areas, traffic calming, public transportation, safety laws and policies, and pre-hospital care of the injured.

PHTLS: Prehospital Trauma Life Support, Military Edition consists of the PHTLS core content and features thirteen chapters written by military prehospital trauma care experts for practitioners in the military environment. PHTLS: Prehospital Trauma Life Support, Military Edition is created in partnership between the National Association of Emergency Medical Technicians (NAEMT) and the Committee on Tactical Combat Casualty Care (C-TCCC). Since 1996, TCCC has improved the care rendered in combat prehospital environments. TCCC is the battlefield prehospital component of the Joint Trauma System, an organization within the United States Department of Defense that projects combat trauma care out to the point of injury and continues that care seamlessly while bringing the casualty home for recuperation and rehabilitation. TCCC guidelines are continuously revised and updated by C-TCCC, an all-volunteer group of military medicine and trauma care

specialists. The membership of C-TCCC includes combat medics, corpsmen, and pararescuemen as well as physicians and physician assistants.
