That the Blood Stay Pure traces the history and legacy of the commonwealth of Virginia ' s effort to maintain racial purity and its impact on the relations between African Americans and Native Americans. Arica L. Coleman tells the story of Virginia ' s racial purity campaign from the perspective of those who were disavowed or expelled from tribal communities due to their affiliation with people of African descent or because their physical attributes linked them to those of African ancestry. Coleman also explores the social consequences of the racial purity ethos for tribal communities that have refused to define Indian identity based on a denial of blackness. This rich interdisciplinary history, which includes contemporary case studies, addresses a neglected aspect of America ' s long struggle with race and identity.

"When Daily Telegraph correspondent Tim Butcher was sent to cover Africa in 2000 he quickly became obsessed with the idea of recreating H. M. Stanley's famous expedition - but travelling alone. Despite warnings that his plan was 'suicidal', Butcher set out for the Congo's eastern border with just a rucksack and a few thousand dollars hidden in his boots.

Making his way in an assortment of vessels including a motorbike and a dugout canoe, helped along by a cast of characters from UN aid workers to a campaigning pygmy, he followed in the footsteps of the great Victorian adventurers.

Butcher's journey was a remarkable feat, but the story of the Congo, told expertly and vividly in this book, is more remarkable still."--Back cover.

Murder has always fascinated us, and when women are the masterminds, the intrigue grows exponentially. Not only are female murderers much rarer than male killers, but their crimes usually also involve a more sophisticated type of plotting. In *Blood on her hands*, award-winning journalist Tanya Farber investigates the

lives, minds and motivations of some of South Africa ' s most notorious female murderers, from the poisonous nurse Daisy de Melker, to the privileged but deeply disturbed Najwa Petersen, to the mysterious Joey Harhoff who died before revealing where the bodies of her victims (including her own niece) were. Farber sets each case against the backdrop of the different eras and regions of 20th and early 21st century South Africa the women operated in. Her writing style is lighter than the subject matter might suggest and *Blood on Her Hands* will keep you reading until late at night -- probably with your light on. The women featured also include: Dina Rodrigues, Phoenix Racing Cloud Theron, Marlene Lehnberg, Chane van Heerden and Celiwe Mbokazi.

Blood Stains Basic Books

Bloody crimes of passion, political assassinations, sinister poisonings, investment fraud and mass mining disasters ... Dr David Klatzow has seen it all. During his extraordinary twenty-six-year career as South Africa ' s foremost independent forensic scientist, he has investigated countless high-profile and notorious cases. Steeped in Blood provides gripping accounts of dozens of these matters, including the infamous deaths of Brett Kebble and Inge Lotz, the Helderberg aeroplane crash and the frustrating investigations of the brutal apartheid years. From the Gugulethu Seven and Trojan Horse massacres to the assassination of David Webster, Klatzow ' s investigations reveal his fierce determination to unveil the truth in spite of overwhelming state obstructions, police bungling and cover-ups. Unfazed by controversy and unwilling to accept no for an answer, Klatzow ' s tenacity, fearlessness and forensic know-how are used to brilliant effect in these fascinating cases. This book exposes a demanding and sinister world where the rewards are equalled only by the frustrations, and where the truth is always elusive. But the truth is out there, and David Klatzow will find it.

Diamonds have long been bloody. A new history

shows how Germany's ruthless African empire brought diamond rings to retail display cases in America—at the cost of African lives. Since the late 1990s, activists have campaigned to remove “ conflict diamonds ” from jewelry shops and department stores. But if the problem of conflict diamonds—gems extracted from war zones—has only recently generated attention, it is not a new one. Nor are conflict diamonds an exception in an otherwise honest industry. The modern diamond business, Steven Press shows, owes its origins to imperial wars and has never escaped its legacy of exploitation. In *Blood and Diamonds*, Press traces the interaction of the mass-market diamond and German colonial domination in Africa. Starting in the 1880s, Germans hunted for diamonds in Southwest Africa. In the decades that followed, Germans waged brutal wars to control the territory, culminating in the genocide of the Herero and Nama peoples and the unearthing of vast mineral riches. Press follows the trail of the diamonds from the sands of the Namib Desert to government ministries and corporate boardrooms in Berlin and London and on to the retail counters of New York and Chicago. As Africans working in terrifying conditions extracted unprecedented supplies of diamonds, European cartels maintained the illusion that the stones were scarce, propelling the nascent U.S. market for diamond engagement rings. Convinced by advertisers that diamonds were both valuable and romantically significant, American purchasers unwittingly funded German imperial ambitions into the era of the World Wars. Amid today's global frenzy of mass consumption, Press's history offers an unsettling reminder that cheap luxury often depends on an alliance between corporate power and state violence. *White Blood* Sarabande Books

The young black activists whose rejection of their parents' complacency led to the 1976 Soweto uprising and the eventual demise of apartheid are part of a long tradition of generational conflict in South Africa. In *Blood from Your Children*, Benedict Carton traces this

intense challenge to an extraordinary and pivotal episode a century ago that bitterly divided families along generational lines. Facing a series of ecological disasters that crippled agriculture in the 1890s, African youths in colonial Natal and Zululand perceived their fathers' struggle to meet increased colonial demands as an act of betrayal. Young people engaged more frequently in premarital sex, while young men sparked widespread gang fights, and young women rejected traditional filial and marital obligations. In 1906, after the imposition of an onerous head tax on young men, this domestic turmoil exploded into an armed uprising known as Bambatha's Rebellion. The young men sought revenge by attacking both the African patriarchs whose apparent accommodation they considered traitorous and the colonial troops dispatched to quell the violence. After the Natal forces crushed the insurrection, some captured rebels faced trial for treason under martial law. Often, their fathers testified against them. While the military intervention eventually caused many more African youths to seek work in the mines, thus defusing generational turmoil, others moved to industrial centers in the wake of the uprising. These young people formed the vanguard of insurgent political groups that continue to play an important role in South African urban life. Through his lively and thorough presentation of the forces at work in Bambatha's Rebellion, Benedict Carton brings a fresh understanding to the tragic role of defiant youth and generational rivalry in African resistance. *Blood, Sweat and Earth* Arena Sport

As a teenager Fred Khumalo greeted his friends with a handshake and the words 'touch my blood'. It implied friendship and trust. The saying became his name. More than that, it became the way he viewed his world.

Everything touched Fred Khumalo. Twice he was bewitched. Twice his father - the 'moegoe', the 'country bumpkin' - took him to inyangas to have the 'demons' banished. Twice his mother - the 'city girl' - took him to the doctor to have the 'fevers' cured. When the American Dudes became the fashion, Khumalo dressed up in outlandish style and strutted the streets. 'You had to be brave to be seen in the outfits that we wore. Green, yellow, maroon, powder blue. Outrageous stuff, garish stuff, bright stuff. Earth, Wind and Fire stuff. Michael Jackson (pre-nose job) stuff.' He smoked dagga with con men and criminals, he pickpocketed 'corpses' on Friday night trains. He worked as a gardener in the larney suburbs and drooled over pornographic photographs with his baas's son. He studied journalism and shackled up with whiteys in a commune called Snake Park, for a while the only darkie in a crazy swirl of booze and drugs and sex. And then the bloody fightings that tore apart KwaZulu/Natal in the 1980s touched his life. Sucked him into a place of horror and violence that threatened to destroy him. When a friend died in his arms with the words 'They really got me, Touch My Blood. They really got me,' Khumalo realised that if he was to outlive the madness he had to run. From the journalist and Sunday Times columnist comes a startlingly honest, humorous and poignant autobiography about growing up in a time of laughter and heartache.

A bold new indictment of the racialization of science  
Decades of data cannot be ignored: African American adults are far more likely to develop Type 2 diabetes than white adults. But has science gone so far in racializing diabetes as to undermine the search for solutions? In a rousing indictment of the idea that notions of biological race should drive scientific inquiry, *Sweetness in the Blood* provides an ethnographic picture of biotechnology ' s framings of Type 2 diabetes risk and race and, importantly, offers a critical examination of the assumptions behind the recruitment of African American and African-descent populations for Type 2 diabetes research. James Doucet-Battle begins with a historical overview of how diabetes has been researched and framed racially over the past century, chronicling one company ' s efforts to recruit African Americans to test their new diabetes risk-score algorithm with the aim of increasing the clinical and market value of the firm ' s technology. He considers African American reticence

about participation in biomedical research and examines race and health disparities in light of advances in genomic sequencing technology. Doucet-Battle concludes by emphasizing that genomic research into sub-Saharan ancestry in fact underlines the importance of analyzing gender before attempting to understand the notion of race. No disease reveals this more than Type 2 diabetes. *Sweetness in the Blood* challenges the notion that the best approach to understanding, managing, and curing Type 2 diabetes is through the lens of race. It also transforms how we think about sugar, filling a neglected gap between the sugar- and molasses-sweetened past of the enslaved African laborer and the high-fructose corn syrup- and corporate-fed body of the contemporary consumer-laborer.
