This book focuses primarily on the characterization, properties and synthesis of nanoscale materials, and is divided into three major parts. This is a valuable reference for materials scientists, and chemical and mechanical engineers working

in R&D and academia, who want to learn more about how nanoparticles and nanomaterials are characterized and engineered. Part one covers nanoparticles formation, self-assembly in the architecture nanostructures, types and classifications of nanoparticles, and signature physical and chemical properties, toxicity and regulations. Part two presents different ways to form nanometer particles, including bottom-up and top-down approaches, the classical and non-classical theories of nanoparticles formation and self-assembly, surface functionalization and other surface treatments to allow practical use. Part three covers characterization of nanoparticles and nanostructured materials, including the determination of size and shape, in addition to atomic and electronic structures and other important properties. Includes new physical and chemical techniques for the synthesis of nanoparticles and architecture nanostructures Features an in-depth treatment of nanoparticles and nanostructures, including their characterization and chemical and physical properties Explores the unusual properties of materials that are developed by modifying their shape and composition and by manipulating the arrangement of atoms and molecules Explains important techniques for the synthesis, fabrication and the characterization of complex nano-architectures Sew Useful Oxford University Press, USA

Since the 1970s West German historiography has been one of the main arenas of international comparative history. It has produced important empirical studies particularly in social history as well as methodological and theoretical reflections on comparative history. During the last twenty years however, this approach has felt pressure from two sources: cultural historical approaches, which stress microhistory and the construction of cultural transfer on the one hand, global history and transnational approaches with emphasis on connected history on the other. This volume introduces the reader to some of the major methodological debates and to recent empirical research of German historians, who do comparative and transnational work.
