Celebrated urban theorist Davis provides a global overview of the diverse religious, ethnic, and political movements competing for the souls of the new urban poor.

The 48 Laws of Power Penguin
Friedrich Froebel (1782 – 1852), the inventor of kindergarten, was one of the most influential educational thinkers of the 19th century.

This book showcases the cutting-edge work being undertaken around the world inspired by this pioneer of early childhood education and shows the many ways in which Froebel's work has been applied and extended. It presents a wealth of Froebelian expertise on topics including pedagogy and curriculum, history, architecture, neuroscience, peace and religious education and links Froebel's theories to

other thinkers including John Dewey, Michel Foucault, Paulo Freire, Aili Helenius and Chen Heqin. It highlights what Froebel means today in a variety of settings around the world and includes contributions from academics and practitioners based in North and South America, Europe, Australasia, Africa and Asia.

Safer Homes, Stronger Communities Bloomsbury Publishing

This book is a study of ancient views about 'moral luck'. It examines the fundamental ethical problem that many of the valued constituents of a well-lived life are vulnerable to factors outside a

person's control, and asks how this affects our appraisal of persons and their lives. The Greeks made a profound contribution to these questions, yet neither the problems nor the Greek views of them have received the attention they deserve. This book thus recovers a central dimension of Greek thought and addresses major issues in contemporary ethical theory. One of its most original aspects is its interrelated treatment of both literary and philosophical texts. *The Fragility of Goodness* has proven to be important reading for philosophers and classicists, and its non-technical style makes it accessible to any educated person interested in the difficult problems it tackles.

This edition, first published in 2001, features a preface by Martha Nussbaum.

Since precious few architectural drawings and no theoretical treatises on architecture

remain from the premodern Islamic world, the Timurid pattern scroll in the collection of the Topkapi Palace Museum Library is an exceedingly rich and valuable source of information. In the course of her in-depth analysis of this scroll dating from the late fifteenth or early sixteenth century, Gülru Necipoğlu throws new light on the conceptualization, recording, and transmission of architectural design in the Islamic world between the tenth and sixteenth centuries. Her text has particularly far-reaching implications for recent discussions on vision, subjectivity, and the semiotics of abstract representation. She also compares the Islamic understanding of geometry with that found in medieval Western art, making this book particularly valuable for all historians and critics of architecture. The scroll, with its 114 individual geometric patterns for wall surfaces and vaulting, is reproduced entirely in color in this elegant, large-format volume. An extensive catalogue includes illustrations showing the underlying

geometries (in the form of incised "dead" drawings) from which the individual patterns are generated. An essay by Mohammad al-Asad discusses the geometry of the muqarnas and demonstrates by means of CAD drawings how one of the scroll's patterns could be used to design a three-dimensional vault.

Amoral, cunning, ruthless, and instructive, this multi-million-copy New York Times bestseller is the definitive manual for anyone interested in gaining, observing, or defending against ultimate control – from the author of *The Laws of Human Nature*. In the book that *People* magazine proclaimed "beguiling" and "fascinating," Robert Greene and Joost Elffers have distilled three thousand years of the history of power into 48 essential laws

by drawing from the philosophies of Machiavelli, Sun Tzu, and Carl Von Clausewitz and also from the lives of figures ranging from Henry Kissinger to P.T. Barnum. Some laws teach the need for prudence the Master"), others teach the value of confidence ("Law 28: Enter Action with Boldness"), and many recommend absolute self-preservation ("Law 15: Crush Your Enemy Totally"). Every law, though, has one thing in common: an interest

in total domination. In a bold and arresting two-color package, The 48 Laws of Power is ideal whether your aim is conquest, self-defense, or simply to understand the rules of the game.

Decolonizing Methodologies

Manchester University Press
An anniversary edition of an influential book that introduced a groundbreaking approach to the

study of science, technology, and society. This pioneering book, first published in 1987, launched the new field of social studies of technology. It introduced a method of inquiry—social construction of technology, or SCOT—that became a key part of the wider discipline of science and technology studies.

The book helped the MIT Press shape its STS list and inspired the Inside Technology series. The thirteen essays in the book tell stories about such varied technologies as thirteenth-century galleys, eighteenth-century cooking stoves, and twentieth-century missile systems. Taken together, they affirm the fruitfulness of an

approach to the study of technology that gives equal weight to technical, social, economic, and political questions, and they demonstrate the illuminating effects of the integration of empirics and theory. The approaches in this volume—collectively called SCOT (after the volume's title)

have since broadened their scope, and twenty-five years after the publication of this book, it is difficult to think of a technology that has not been studied from a SCOT perspective and impossible to think of a technology that cannot be studied that way. *Philosophy manual: a South-South perspective* Penguin

More children born today will survive to adulthood than at any time in history. It is now time to emphasize health and development in middle childhood and adolescence--developmental phases that are critical to health in adulthood and the next generation. *Child and Adolescent Health and Development*

explores the benefits that accrue from sustained and targeted interventions across the first two decades of life. The volume outlines the investment case for effective, costed, and scalable interventions for low-resource settings, emphasizing the cross-sectoral role

of education. This evidence base can guide policy makers in prioritizing actions to promote survival, health, cognition, and physical growth throughout childhood and adolescence. *The Russian Revolutions of 1917* Academic Studies Press
For more than three decades, preeminent scholars in

comparative literature and postcolonial studies have called for a return to philology as the indispensable basis of critical method in the humanities. Against such calls, this book argues that the privilege philology has always enjoyed within the modern humanities silently reinforces a colonial hierarchy. In fact, each of philology's foundational

innovations originally served British rule in India. Tracing an unacknowledged history that extends from British Orientalist Sir William Jones to Palestinian American intellectual Edward Said and beyond, *Archaeology of Babel* excavates the epistemic transformation that was engendered on a global scale by the colonial

reconstruction of native languages, literatures, and law. In the process, it reveals the extent to which even postcolonial studies and European philosophy—not to mention discourses as disparate as Islamic fundamentalism, Hindu nationalism, and global environmentalism—are the progeny of colonial rule. Going further, it unearths the alternate

concepts of language and literature that were lost along the way and issues its own call for humanists to reckon with the politics of the philological practices to which they now return.

S. Maria Hampshire Privatization has been on the right-wing agenda for years. Health care, schools, Social Security, public lands, the

military, prisons- all are considered fair game. Through stories, analysis, impassioned argument-even song lyrics-Si Kahn and Elizabeth Minnich show that corporations are, by their very nature, unable to fulfill effectively what have traditionally been the responsibilities of government. They

make a powerful case that the market is not the measure of all things, and that a vital public sector is an indispensable component of a healthy democracy. *On Revolution* World Bank Publications 'A landmark in the process of decolonizing imperial Western knowledge.' Walter Mignolo, Duke University To the colonized, the term 'research' is

conflated with European colonialism; the ways in which academic research has been implicated in the throes of imperialism remains a painful memory. This essential volume explores intersections of imperialism and research - specifically, the ways in which imperialism is embedded in disciplines of knowledge and

tradition as 'regimes of truth.' Concepts such as 'discovery' and 'claiming' are discussed and an argument presented that the decolonization of research methods will help to reclaim control over indigenous ways of knowing and being. Now in its eagerly awaited second edition, this bestselling book has been substantially revised, with new

case-studies and examples and important additions on new indigenous literature, the role of research in indigenous struggles for social justice, which brings this essential volume urgently up-to-date. **Guide to Industrial Control Systems (ICS) Security** National Academies Press The ascent of globalisation tells the sweeping historical drama of

the development of globalisation, from the Second World War to the present day. The story is told through the richly detailed accounts of eighteen remarkable men and women, describing how these architects reshaped the modern world, for better or worse. Profiling their lives, ideas and struggles reveals fresh insights into the nature of globalisation. The

book also examines their legacies, shedding new light on many of the problems the world faces today: the global financial crisis, the political and economic malaise afflicting Europe, the numerous failures of the United Nations, the unchecked power of corporations and the inability of governments to cooperate on critical issues such as

climate change. Environmental education in the schools creating a program that works. World Bank Publications Looks at anti-corruption laws & treaties in a number of key jurisdictions worldwide. *Subject Guide to Books in Print* Bloomsbury Publishing Beautifully
