Automation has been shaping world agriculture since the early twentieth century. Motorized mechanization has brought significant benefits in terms of improved productivity, reduced drudgery and more efficient allocation of labour, but also some negative environmental impacts. More recently, a new generation of digital agricultural automation technologies has appeared, with the potential to further enhance productivity, as well as resilience,

while also addressing the environmental sustainability challenges driven by past mechanization. The State of Food and Agriculture 2022 looks into the drivers of agricultural automation, including the more recent digital technologies. Based on 27 case studies, the report analyses the business case for adoption of digital automation technologies in different agricultural production systems across the world. It identifies several barriers preventing inclusive adoption of these technologies, particularly by small-scale producers. Key barriers are low digital literacy and lack of an enabling infrastructure, such as connectivity and access to electricity, in addition to financial constraints. Based on the analysis, the publication suggests policies to ensure that disadvantaged groups in developing regions can benefit from agricultural automation and that automation contributes to sustainable and resilient agrifood systems.

Our Changing Menu helps us understand how to think about food, rather than what to think. The diversity of the co-authors' experiences is woven together to create awareness and help us get involved in improving our diets, while reducing food waste and food's impacts on climate change and the planet.— Jason Clay, Senior Vice President, Markets, World Wildlife Fund

Our Changing Menu unpacks the increasingly complex relationships between food and climate change. Whether you're a chef, baker, distiller, restaurateur, or someone who simply enjoys a good pizza or drink, it's time to come to terms with how climate change is affecting our diverse and interwoven food system. Michael P. Hoffmann, Carrie Koplinka-Loehr, and Danielle L. Eiseman offer an eye-opening journey through a complete menu of before-dinner drinks and salads; main courses and sides; and coffee and dessert. Along the way they examine the escalating changes occurring to the flavors of spices and teas, the yields of wheat, the vitamins in rice, and the price of vanilla. Their story is rounded out with a primer on the global food system, the causes and impacts of climate change, and what we can all do. Our Changing Menu is a celebration of food and a call to action—encouraging readers to join with others from the common ground of food to help tackle the greatest challenge of our time.

Geelong's Changing Landscape offers an

insightful investigation of the ecological history of the Geelong and Bellarine Peninsula region. Commencing with the penetrating perspectives of Wadawurrung Elders, chapters explore colonisation and post-World War II industrial development through to the present challenges surrounding the ongoing urbanisation of this region. Expert contributors provide thoughtful analysis of the ecological and cultural characteristics of the landscape, the impact of past actions, and options for ethical future management of the region. This book will be of value to scientists, engineers, land use planners, environmentalists and historians.

It is necessary to integrate field data relevant to policy with a global overview with up-to-date information for synthesis into scenarios and a vision of how future research and development in agriculture can best help those who are most needy and have little access to productive resources. The overall task is a huge challenge for policy-makers and the agricultural research establishment. It is also of concern in teaching agricultural students to be able to respond to future challenges. This publication is an attempt to stimulate discussion on future options of research policy, suggesting changes of agricultural R&D for societal development in accordance with the Millennium
