Direct memory access (DMA) is a feature of computer systems that allows certain hardware subsystems to access main system memory (random-access memory), independent of the central processing unit (CPU).. Without DMA, when the CPU is using programmed input/output, it is typically fully occupied for the entire duration of the read or write operation, and is thus unavailable to perform other work.

AB Engine Incorporated introduces a New Method (AB Engine Method) to convert burning gasoline, gas or diesel fuels into mechanical energy while still within the bounds of the conventional Otto, Miller, Diesel or similar internal combustion engine (ICE) design constraints. The new method allows for an ICE design with the highest fuel efficiency theoretically possible.
