A new book from ACEP that will help you participate effectively--or lead the way--in the successful design of your emergency department.

Emergency Department Design will teach you the design and planning process so that you and other caregivers can make decisions about what's best for your department. Whether you're building a new department, remodeling an existing one, expanding, or simply adding a new service, the critical decisions you'll make must be based on an understanding of the design process. Time and time again, the best results are achieved when caregivers drive this process, working with design professionals to plan not just for today's patients, but also for those of the future. Read this book and learn how to: Assess your space needs Set physical design goals that meet operational outcomes Define the scope of your project Select a design professional Evaluate the "workability" of proposed design solutions ...and much more. You'll minimize the complexity of the challenge, reduce wasted time, and focus on creating a design that fulfills your vision of how emergency care should be provided. The author is Jon Huddy, AIA, with

FreemanWhite, Inc., a nationally renowned architectural firm specializing in emergency department design. Mr. Huddy brings a passion for emergency department design, a commitment to include caregivers in the design process, and an entertaining, energetic presentation style to this book. Michael T. Rapp, MD, JD, FACEP, past president of ACEP, served as editor and contributed his insights in a special introductory chapter, "The Emergency Physician's Perspective." Plus, more than 20 other emergency care professionals and architects have contributed case studies and "pearls and pitfalls" from their own personal experiences with emergency department design projects. Reports for California American Hospital Association This volume presents a selection of highly specialized project that include women and children ' s healthcare environments and Proton Therapy, Mental Health and state-of -- the -- art cancer centres. The design solutions are based on the contemporary concerns of healthcare providers covering financial viability, patient safety, staff satisfaction, environmental responsibility and operational efficiency. The projects featured are illustrated with full colour photographs and architectural plans.

The authors are recognized as national experts in the design of hospitals and other health care facilities that are 'sustainable.' Both authors are engaged in the development of the Green Guide for Health Care 2.0 Pilot (gghc.org) that launched in late 2004. A new rating system and policy, LEED Application Guide for Healthcare (LEED-HC), using the Green Guide as its foundation, is scheduled for release by USGBC in late 2006 and both authors are active in its development. This book will build upon the authors' combined expertise and will be considered THE guide to learning about sustainable practices for healthcare and LEED-HC. It will include LEED-HC information and guidelines, as well as case studies of the best projects and contributed essays by acknowledged experts on topics related to sustainable design for healthcare. Importantly, an increasing number of hospitals and other health care facility building projects are required to be sustainable in some way, especially if the project is receiving government funding.

Studies confirm that the physical environment influences health outcomes, emotional state, preference, satisfaction and orientation, but very little research has focused on mental and behavioural health settings. This book summarizes design principles and design research for individuals who are intending to design new mental and behavioural health facilities and those wishing to evaluate the quality of their existing facilities. The authors discuss mental and behavioural health systems, design guidelines, design research and existing standards, and provide examples of best practice. As behavioural and mental health populations vary in their needs, the primary focus is limited to environments that support acute care, outpatient and emergency care, residential care, veterans, pediatric patients, and the treatment of chemical dependency.
