The G16CM34 is a natural gas, spark ignited, V-style, turbocharged and aftercooled engine that provides: low emissions, high efficiency, high reliability, high flexibility, constant torque and variable speed. The engine achieves high efficiency and low emissions by utilizing solenoid operated gas admission valves, enriched prechamber design, and Cat® ADEM A3 control technology.

Cat 3PC Valves are a great example. Depending on the configuration, priority can be assigned to one function over another. Their sectional design allows valves to be configured with two to nine sections. This offers great versatility, giving you the ability to specify a valve that perfectly matches the demands of your application.
