Plans for Everything - Stirling Engine Plans

The Penny Engine is a Wobbler engine that runs on compressed air. This type of engine is called a wobbler because there is no connecting rod or wristpin- the entire cylinder and piston pivot as the crank spins, and as it pivots side to side compressed air (or steam or compressed CO2) is ported in at the right time to push the piston down.

The Stirling engine is a closed cycle heat engine. It is typically completely sealed from the outside environment and works on the expansion and compression of the gas (typically air) that's enclosed in the sealed engine. Fuel does not move through the engine like in a conventional internal combustion engine.

Significant new rotary engine design runs on compressed air

Air engine 2 I had previously built a reciprocating air engine out of wood back in 1985, and posted it here in 2007. I received a number of enquiries for plans for that engine, but the design for that air engine wasn't really one that lent itself to building from plans. So I came up with a better design for my air engine 2.

Steam Engine Plans - Plans for Everything, Mostly Free

A hot air engine (historically called an air engine or caloric engine) is any heat engine that uses the expansion and contraction of air under the influence of a temperature change to convert thermal energy into mechanical work. These engines may be based on a number of thermodynamic cycles encompassing both open cycle devices such as those of Sir George Cayley and John Ericsson and the closed ...
