A cold front forms where an advancing cold air mass meets warmer air, while a warm front forms where an advancing warm air mass meets colder air. The front advances in the direction dictated by the movement of the more active air mass. Regardless of which air mass is advancing, it is always the warmer air that rises over the cooler. Warm Front: Warm air is more active and pushes the cold air. Cold Front: Cold air pushing and trying to occupy the space of warm air.

[Air masses - Weather systems - National 5 Geography ...](#)

An air mass will form when air sits over an area for a long period. The air mass will take on the same characteristics as the surface beneath. Therefore an air mass sitting over tropical waters will become warm and moist. This type of air mass is called Maritime Tropical (mT). An air mass developing over a cold land area is called Continental Polar (cP) and is cold and dry.
