In the current educational environment, there has been a shift towards online learning as a replacement for the traditional in-person classroom experience. With this new environment

comes new technologies, benefits, and challenges for providing courses to students through an entirely digital environment. With this shift comes the necessary research on how to utilize these online courses and how to develop effective online educational materials that fit student needs and encourage student learning, motivation, and success. The optimization of these online tools requires a deeper look into curriculum, instructional design, teaching techniques, and new models for student assessment and evaluation. Information on how to create valuable online course content, engaging lesson plans for the digital space, and meaningful student activities online are only a few of many current topics of interest for promoting student achievement

through online learning. The Research Anthology on Developing Effective Online Learning Courses provides multiple perspectives on how to develop engaging and effective online learning courses in the wake of the rapid digitalization of education. This book includes topics focused on online learners, online course content, effective online instruction strategies, and instructional design for the online environment. This reference work is ideal for curriculum developers, instructional designers, IT consultants, deans, chairs, teachers, administrators, academicians, researchers, and students interested in the latest research on how to create online learning courses that promote student success.

Safety is more than the absence of accidents. Safety has the goal of transforming the levels of risk that are inherent in all human activity, while its interdisciplinary nature extends its influence far into most corporate management and government regulatory actions. Yet few engineers have attended a safety course, conference or even a lecture in

the area, suggesting that those responsible for the safe construction and operation of complex high-risk socio-technical systems are inadequately prepared. This book is designed to meet the expressed needs of aviation safety management trainees for a practical and concise education supplement to the safety literature. Written in a highly readable and accessible style, its features include: ¢ detailed analysis of the forward-looking System Safety approach, with its focus on accident prevention; ¢ classification of transportation safety literature into distinct schools of thought (Tort Law, Reliability Engineering, System Safety Engineering); ¢ real world, practical, illustrations of the theory; ¢ the history, theory and practice of safety management ; ¢ interdisciplinary thinking about safety . The flying public is faced with a bewildering array of aviation safety data from a diverse and ever increasing number of sources. This book is an essential guide to the available information, and a major contribution to the international public debate on aviation safety.

This book will interest researchers, scientists, engineers and graduate students in many disciplines, who make use of

mathematical modeling and computer simulation.

Although it represents only a small sample of the research activity on numerical simulations, the book will certainly serve as a valuable tool for researchers interested in getting involved in this multidisciplinary field. It will be useful to encourage further experimental and theoretical researches in the above mentioned areas of numerical simulation.

In today's globalized world, professional fields are continually transforming to keep pace with advancing methods of practice. The theory of adult learning, specifically, is a subject that has seen new innovations and insights with the advancement of online and blended learning. Examining new principles and characteristics in adult learning is imperative, as emerging technologies are rapidly shifting the standards of higher education. The Handbook of Research on Adult Learning in Higher Education is a collection of innovative research on the methods and applications of adult education in residential, online, and blended course delivery formats. This book will focus on the impact that culture, globalization, and emerging

technology currently has on adult education. While highlighting topics including andragogical principles, professional development, and artificial intelligence, this book is ideally designed for teachers, program developers, instructional designers, technologists, educational practitioners, deans, researchers, higher education faculty, and students seeking current research on new methodologies in adult education.

This book presents a number of guidelines that are particularly useful in the context of decisions related to system-approach-based modern traffic engineering

<p>for the development of transport networks. Including practical examples and describing decision-making support systems it provides valuable insights for those seeking solutions to contemporary transport system problems on a daily basis, such as professional working for local authorities involved in planning urban and regional traffic development strategies as well as representatives of business and industry directly involved in implementing traffic engineering solutions. The guidelines provided enable readers to address problems in a timely manner and simplify the choice of appropriate strategies (including those connected with the relation between pedestrians and vehicle traffic flows, IT development in freight transport, safety issues related to accidents in road tunnels, but also open areas, like roundabouts and crossings). Furthermore, since the book also examines new theoretical-model approaches (including the model of arrival time distribution forming in a dense vehicle flow, the methodological basis of modelling and optimization of transport processes in the interaction of railways and</p>	<p>maritime transport, traffic flow surveys and measurements, transport behaviour patterns, human factors in traffic engineering, and road condition modelling), it also appeals to researches and scientists studying these problems. This book features selected papers submitted to and presented at the 16th Scientific and Technical Conference Transport Systems Theory and Practice organized by the Department of Transport Systems and Traffic Engineering at the Faculty of Transport of the Silesian University of Technology. The conference was held on 16–18 September 2019 in Katowice (Poland), more details at www.TSTP.polsl.pl. <i>Air Transport</i> Ashgate Publishing, Ltd.
