In the pantheon of

air power
spokesmen, Giulio
Douhet holds
center stage. His
writings, more
often cited than
perhaps actually
read, appear as
excerpts and
aphorisms in the
writings of
numerous other

air power
spokesmen,
advocates-and
critics. Though a
highly
controversial
figure, the very
controversy that
surrounds him
offers to us a
testimonial of the
value and depth of

his work, and the need for airmen today to become familiar with his thought. The progressive development of air power to the point where, today, it is more correct to refer to aerospace power has not outdated the notions of Douhet in the slightest. In fact, in many ways, the kinds of technological capabilities that we enjoy as a global air power provider attest to the breadth of his vision. Douhet, together with Hugh “Boom” Trenchard of Great Britain and William “Billy” Mitchell of the

United States, is justly recognized as one of the three great spokesmen of the early air power era. This reprint is offered in the spirit of continuing the dialogue that Douhet himself so perceptively began with the first edition of this book, published in 1921. Readers may well find much that they disagree with in this book, but also much that is of enduring value. The vital necessity of Douhet’s central vision—that command of the air is all important in modern warfare—has been proven throughout the

history of wars in this century, from the fighting over the Somme to the air war over Kuwait and Iraq. The Chinese
People's Liberation

Army (PLA)
continues to work
diligently on all
aspects of their
aerospace forces.
This includes areas
not only of
traditional aircraft,
but also in more
modern, and some
cutting edge,
technologies. The
UAV is one area in
which the People's
Republic of China,
and the PLA in
specific, has
invested significant
time and effort.
While we recognize
that the term
"unmanned" is the
common and official
term, it is rather
misleading in the
fact that humans, at
least up until today,
still play a critical
role in their
operations.

Nonetheless, we will
not buck convention
at this moment, and
continue to use
"unmanned" for the
'U' in UAV, for this
paper. The PRC is
the world's largest
producer of UAVs
at this time, and
captures a vast
portion of the
commercial market,
as well as the
military one. While
it is important to
keep the commercial
aspects in mind, this
particular paper will
focus on military
UAVs, their
development,
deployments, and
current and potential
uses on the
battlefield of today
and tomorrow. The
paper seeks to serve
as a starting point to
understand this

growing field, and to give analysts a common baseline from which to work, and from which to judge growth, both rapidly and complexity, in the future.

Polymer matrix composites are used extensively across a wide range of industries, making the design and development of effective manufacturing processes of great importance. Manufacturing techniques for

polymer matrix composites (PMCs) provides an authoritative review of the different technologies employed in the manufacture of this class of composite. Following an introduction to composites and manufacturing processes, one reviews the manufacturing of short fiber and nanoparticle based polymer composites, with injection molding examined in depth. Thermoplastic processing is the focus of part two. Sheet forming, fabric thermostamping, filament winding and continuous fiber reinforced profiles are investigated. Part three reviews thermoset processing. A survey of resin transfer molding follows, including vacuum-assisted and compression resin transfer molding. The pultrusion process is then considered, and compression molding concludes with an investigation into autoclave and out-of-autoclave

curing processes in polymer matrix composites. With its distinguished editors and international team of expert contributors, Manufacturing techniques for polymer matrix composites (PMCs) is an essential guide for engineers and scientists working in the field of polymer matrix composites. Provides an authoritative review of the different technologies employed in the manufacture of polymer matrix composites. Reviews the manufacturing

of short fiber and nanoparticle-based polymer matrix composites, with injection and compression molding examined in depth. Examines thermoplastic processing, sheet forming, fabric thermostamping, filament winding and continuous fiber reinforced profiles. *Scientific and Technical Aerospace Reports* Elsevier. Air University Quarterly Review Lynne Rienner Publishers Nitrogen Compounds: Advances in Research and Application: 2011 Edition is a ScholarlyEditions™ eBook that delivers timely, authoritative, and comprehensive information about Nitrogen

Compounds. The editors have built Nitrogen Compounds: Advances in Research and Application: 2011 Edition on the vast information databases of ScholarlyNews™. You can expect the information about Nitrogen Compounds in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed,

and relevant. The content of Nitrogen Compounds: Advances in Research and Application: 2011 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyE

ditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility. More information is available at <http://www.ScholarlyEditions.com/>.
