1930s in the United States, the Works Progress Administration developed the Federal Writers ' Project to support writers and artists while making a national effort to document the country ' s shared history and culture. The American Guide series consists of individual guides to each of the states. Little-known authors—many of whom would later become celebrated

literary figures—were commissioned to write these important books. John Steinbeck, Saul Bellow, Zora Neale Hurston, and Ralph Ellison are among the more than 6,000 writers, editors, historians, and researchers who documented this celebration of local histories. Photographs, drawings, driving tours, detailed descriptions of towns, and rich

cultural details exhibit each state ' s unique flavor. The Bluegrass State of Kentucky, which was primarily a rural state in the 1930 ' s when this WPA Guide was published, features Louisville as the only major city. Yet this does not limit the material in the guide by any means, as it also includes essays on Daniel Boone, bluegrass music, and old Southern American

Author Dr Marc Bubbs is a performance nutritionist with a portfolio of professional and Olympic athletes - but he is also the dad of three girls, all under 7! Dr. Bubbs is here with you, in the eye of the mid-life storm, and he has created the ultimate book to help you through it. For fans of Joe Wicks and Michael Mosley, Dr. Bubbs offers simple, evidence-based and time-efficient strategies to help you reignite your energy and passion. His realistic, grown-up and non-judgemental approach is to

explain the effect some food groups and lack of exercise and sleep have on our body. The information presented is easy to digest and he offers advice that can be tailored to your body and personality type. In his expert opinion, small changes such as ‘ not eating after 8pm for five out of seven days ’ can have a big impact on weight loss and positive mood. Rather than eliminating certain food groups like fats and carbohydrates, he looks at ‘ turning the dial ’ on them depending on individual needs. If life has become too sedentary, he

provides ways to increase suppleness so that you can start to reintroduce movement into your life without causing pain. Guiding us through the myriad of confusion lifestyle messages, Dr. Bubbs teaches us: How to increase flexibility How to train with achy joints, knees, back, shoulders... Whether a plant-based diet is right How to maintain bone health Whether to lift weights Who should do HIIT (and who shouldn ’ t) The importance of glucose control in your diet Advice on dealing with anxiety and low mood How to set realistic expectations

Here for the first time in print is the story of a small group who dared to confront Adolf Hitler and the Third Reich with the love of Jesus Christ. Avoiding covert resistance on the one hand and complicity and compromise on the other, the Rhon Bruderhof, under the courageous leadership of Eberhard Arnold, boldly witnessed to the politics of the Kingdom of God in Nazi Germany. Although "less than a gnat to an elephant," in Arnold's words, they believed that as God's ambassadors love could overcome hatred—even of Adolf Hitler himself. This is an amazing account of a community who stayed true to the nonviolent way of the Cross, and how, despite relentless Nazi opposition, God protected and victoriously led them along the way.

One of the first great reference tools on the Commonwealth, this WPA Guide is an important, vital part of our heritage.

While it includes brief essays describing Kentucky's history, folklore, education, industry, geology, ethnic mix and other topics, the most remarkable feature is the driving tours that are as accurate today as they were more than half a century ago. Careful annotations give directions, point out historical and tourist sites, describe the country side, and even provide mileage for the drives.

and industrial applications. It is intended to be a standalone book in a series that covers the Internet of Things activities of the IERC ? Internet of Things European Research Cluster from technology to international cooperation and the global "state of play". The book builds on the ideas put forward by the European research Cluster on the Internet of Things Strategic Research Agenda and presents global views and state of the art results on the challenges facing the	research, development and deployment of IoT at the global level. Today we see the integration of Industrial, Business and Consumer Internet which is bringing together the Internet of People, Internet of Things, Internet of Energy, Internet of Vehicles, Internet of Media, Services and Enterprises in forming the backbone of the digital economy, the digital society and the foundation for the future knowledge and innovation based economy in supporting	solutions for the emerging challenges of public health, aging population, environmental protection and climate change, the conservation of energy and scarce materials, enhancements to safety and security and the continuation and growth of economic prosperity. Penetration of smartphones and advances in machine to machine and wireless communication technology will be the main drivers for IoT

development. The IoT contribution is in the increased value of information created by the number of interconnections among things and the transformation of the processed information into knowledge shared into the Internet of Everything. The connected devices are part of ecosystems connecting people, processes, data, and things which are communicating in the cloud using the increased storage and computing power and pushing for standardization of communication and metadata. In this context the next generation of the Cloud technologies will need to be flexible enough to scale autonomously, adaptive enough to handle constantly changing connections and resilient enough to stand up to the huge flows in data that will occur. For 2025 analysts forecast that there will be six devices per human on the planet, which means 50 billion more connected devices over the next 12 years. The Internet of Things market is connected to this devices growth from industrial machine to machine (M2M) systems, smart meters and wireless sensors. Enabling technologies such as nanoelectronics, MEMS, embedded systems, intelligent device management, smart phones, telematics, smart network infrastructure, cloud computing and software technologies will create new products, new services, new interfaces by creating smart environments and
