PDF/A is an ISO standard for using the PDF format for long-term archiving of digital documents. "PDF/A in a Nutshell 2.0" provides a comprehensive introduction to the material and shows off the latest developments available with PDF/A-2 and PDF/A-3. The brochure provides information about PDF/A tools and strategies for creating and validating

PDF/A files.

A New Direction for China's Defense Industry
Amsterdam University Press

This book offers an inclusive perspective on the constellation of languages in Europe by taking into account official state languages, regional minority languages and immigrant minority languages. Although "celebrating linguistic diversity" is one of the key propositions in the European discourse on multilingualism and language policies, this device holds for these three types of languages in a decreasing order. All three types of languages, however, are constituent parts of a multilingual European identity and should be taken into account in any type of language policy. Both facts and policies on multilingualism and plurilingual education are addressed in case studies at the national and European level. The selection of case studies is based on a careful weighing of

geographical spread of countries and languages across Europe on the one hand, and availability of established expert knowledge on the other. After an Introduction to the theme of the book (Guus Extra and Durk Gorter), Part I deals with official state languages with a focus on the spread of English as lingua franca across Europe (Juliane House), on French and France (Dennis Ager), on Polish in Poland and abroad (Justyna Lesniewska), and on language constellations in the Baltic States (Gabrielle Hogan-Brun). Part II deals with regional minority languages with a focus on Catalan in Spain (Francesc Xavier Vila i Moreno), Frisian in the Netherlands (Durk Gorter et al.), Hungarian as a minority language in Central Europe (Susan Gal), and Saami in the Nordic countries (Mikael Svonni). Part III deals with immigrant minority languages in the United Kingdom (Viv Edwards), Sweden (Lilian

Nygren-Junkin), Italy (Monica Barni and Carla Bagna) and Europe at large (Guus Extra and Kutlay Ya mur).

Low-Visibility Operations in American Aviation, 1918–1958 Council on Foreign Relations

After 9/11, which triggered a global debate on public diplomacy, 'PD' has become an issue in most countries. This book joins the debate. Experts from different countries and from a variety of fields analyze the theory and practice of public diplomacy. They also evaluate how public diplomacy can be successfully used to support foreign policy.

A Primer in European Design, Production and Maintenance Organisations Rand Corporation

"This book provides examples of constants that communicators and their leaders should stay focused on. Those constants are: (1) responsiveness to the media; (2) providing access to the media; (3) ensuring good working relationships with the media; and (4) always maintaining one's integrity. Each chapter is dedicated to one or several examples of these concepts"--

Cosimo, Inc.

This updated and revised edition outlines strategies and models for how to use technology and knowledge to improve performance, create jobs and increase income. It shows what skills will be required to produce, sell and manage performance over time, and how manual jobs can contribute to reduce the consumption of non-renewable resources.

The 9/11 Commission Report

Government Printing Office

The digital transformation is in full swing and fundamentally changes how we live, work, and communicate with each other. From retail to finance, many industries see an inflow of new technologies, disruption through innovative platform business models, and employees struggling to cope with the significant shifts occurring. This Fourth Industrial Revolution is predicted to also transform Logistics and Supply Chain

Management, with delivery systems becoming automated, smart networks created everywhere, and data being collected and analyzed universally. The Digital Transformation of Logistics: Demystifying Impacts of the Fourth Industrial Revolution provides a holistic overview of this vital subject clouded by buzz, hype, and misinformation. The book is divided into three themed-sections: Technologies such as self-driving cars or virtual reality are not only electrifying science fiction lovers anymore, but are also increasingly presented as cure-all remedies to supply chain challenges. In The Digital Transformation of Logistics: Demystifying Impacts of the Fourth Industrial Revolution, the authors peel back the layers of excitement that have grown around new technologies such as the Internet of Things (IoT), 3D printing, Robotic Process Automation (RPA), Blockchain or Cloud computing, and show use cases that give a glimpse about the fascinating future we can expect. Platforms that allow businesses to centrally acquire

and manage their logistics services especially for sales executives who disrupt an industry that has been relationship-based for centuries. The authors discuss smart contracts, which are one of the most exciting applications of Blockchain, Software as a Service (SaaS) offerings for freight procurement, where numerous data sources can be integrated and decision-making processes automated, and marine terminal operating systems as an integral node for shipments. In *The Digital Transformation of Logistics: Demystifying Impacts of the Fourth Industrial Revolution*, insights are shared into the cold chain industry where companies respond to increasing quality demands, and how European governments are innovatively responding to challenges of cross-border eCommerce. People are a vital element of the digital transformation and must be on board to drive change. *The Digital Transformation of Logistics: Demystifying Impacts of the Fourth Industrial Revolution* explains how executives can create sustainable impact and how competencies can be managed in the digital age -

require urgent upskilling to remain relevant. Best practices are shared for organizational culture change, drawing on studies among senior leaders from the US, Singapore, Thailand, and Australia, and for managing strategic alliances with logistics service providers to offset risks and create cross-functional, cross-company transparency. *The Digital Transformation of Logistics: Demystifying Impacts of the Fourth Industrial Revolution* provides realistic insights, a ready-to-use knowledge base, and a working vocabulary about current activities and emerging trends of the Logistics industry. Intended readers are supply chain professionals working for manufacturing, trading, and freight forwarding companies as well as students and all interested parties.

Communications and Leadership on the Same Page John Wiley & Sons
Infrastructure for Homeland Security Environments
Wireless Sensor Networks helps readers discover the emerging field of low-cost standards-based sensors that promise a high order of spatial and temporal resolution and accuracy in an ever-increasing universe of applications. It shares the latest advances in science and engineering paving the way towards a large plethora of new applications in such areas as infrastructure protection and security, healthcare, energy, food safety, RFID, ZigBee, and processing. Unlike other books on wireless sensor

networks that focus on limited applied to the development and industry is a major part of the topics in the field, this book is a broad introduction that covers all the major technology, standards, and application topics. It contains everything readers need to know to enter this burgeoning field, including current applications and promising research and development; communication and networking protocols; middleware architecture for wireless sensor networks; and security and management. The straightforward and engaging writing style of this book makes even complex concepts and processes easy to follow and understand. In addition, it offers several features that help readers grasp the material and then apply their knowledge in designing their own wireless sensor network systems: * Examples illustrate how concepts are

application of * wireless sensor networks * Detailed case studies set forth all the steps of design and implementation needed to solve real-world problems * Chapter conclusions that serve as an excellent review by stressing the chapter's key concepts * References in each chapter guide readers to in-depth discussions of individual topics This book is ideal for networking designers and engineers who want to fully exploit this new technology and for government employees who are concerned about homeland security. With its examples, it is appropriate for use as a coursebook for upper-level undergraduates and graduate students.

Congressional Record National Academies Press
The commercial aviation

U.S. transportation infrastructure and a key contributor to the nation's economy. The industry is facing the effects of a reduced role by the military as a source of high-quality trained personnel, particularly pilots and mechanics. At the same time, it is facing the challenges of a changing American workforce. This book is a study of the civilian training and education programs needed to satisfy the work-force requirements of the commercial aviation industry in the year 2000 and beyond, with particular emphasis on issues related to access to aviation careers by women and minorities.

The New Public Diplomacy
Springer

It has, improbably, been called uncommonly lucid, even riveting by The New York Times, and it was a finalist for the 2004 National Book Awards nonfiction honor. It is a literally

chilling read, especially in its minute-by-minute description of the events of the morning of 9/11 inside the Twin Towers. It is The 9/11 Commission Report, which was, before its publication, perhaps one of the most anticipated government reports of all time, and has been since an unlikely bestseller. The official statement by the National Commission on Terrorist Attacks Upon the United States-which was instituted in late 2002 and chaired by former New Jersey Governor Thomas Kean-it details what went wrong on that day (such as intelligence failures), what went right (the heroic response of emergency services and self-organizing civilians), and how to avert similar future attacks. Highlighting evidence from the day, from airport surveillance footage of the terrorists to phone calls from the doomed flights, and offering details that have

otherwise gone unheard, this is an astonishing firsthand document of contemporary history. While controversial in parts-it has been criticized for failing to include testimony from key individuals, and it completely omits any mention of the mysterious collapse of WTC 7-it is nevertheless an essential record of one of the most transformational events of modern times.

Air Base Defense in the Republic of Vietnam, 1961-1973 WIPO Presents revised and edited papers from a October 2010 conference held in Taipei on the Chinese Air Force. The conference was jointly organized by Taiwan's Council for Advanced Policy Studies, the Carnegie Endowment for International Peace, the U.S. National Defense University, and the RAND Corporation. This books offers a complete picture of where the Chinese air force is today, where it has come from, and most importantly, where it is headed.
The Economist Rand Corporation

The Congressional Record is the official record of the proceedings and debates of the United States Congress. It is published daily when Congress is in session. The Congressional Record began publication in 1873. Debates for sessions prior to 1873 are recorded in The Debates and Proceedings in the Congress of the United States (1789-1824), the Register of Debates in Congress (1824-1837), and the Congressional Globe (1833-1873)
Multilingual Europe Walter de Gruyter
During World War II. Japanese fighters, such as the famed Zero, were among the most respected and feared combat aircraft in the world. But for decades following the defeat of Japan in 1945, a variety of political and economic factors prevented Japan from developing its own modern national fighter. This changed in the 1980s. Japan began independently developing its first world-class fighter since World War II. After several years of contentious

negotiations, the Japanese agreed to work with the United States to cooperatively develop a minimally modified F-16, the FS-X. The new fighter, however, has evolved into a world-class aircraft developed largely by Japanese Industry primarily due to errors committed by the U.S. side. By the fall of 1995, fifty years after the end of World War II, the Zero for the 1990s will have made its first flight, catapulting Japan into the elite ranks of nations capable of developing the most advanced weapon systems. In *Troubled Partnership*, Mark Lorell traces the evolution of the FS-X, disclosing the conflicting economic and security objectives advanced by U.S. officials, the flawed U.S. policy of technology reciprocity, and the challenges of International collaboration. Its deep Intimacy with the Interplay of policy and economy will make this volume of Intense Interest to political Scientists, military studies specialists, historians, and government officials.

With terrorism still prominent on the U.S. agenda, whether the country's prevention efforts match the threat the United States faces continues to be central in policy debate. One element of this debate is questioning whether the United States should create a dedicated domestic intelligence agency. Case studies of five other democracies--Australia, Canada, France, Germany, and the UK--provide lessons and common themes that may help policymakers decide. The authors find that * most of the five countries separate the agency that conducts domestic intelligence gathering from any arrest and

detention powers * each country has instituted some measure of external oversight over its domestic intelligence agency * liaison with other international, foreign, state, and local agencies helps ensure the best sharing of information * the boundary between domestic and international intelligence activities may be blurring.

By the end of World War II, the very concept of landing blind therefore had disappeared from the trade literature, a victim of human limitations.

Chinese Investment in U.S. Aviation John Wiley & Sons
With its unique focus on how culture contributed to the blurring of ideological boundaries between the East and the West, this important volume offers fascinating

insights into the tensions, rivalries and occasional cooperation between the two blocs. Encompassing developments in both the arts and sciences, the authors analyze focal points, aesthetic preferences and cultural phenomena through topics as wide-ranging as the East- and West German interior design; the Soviet stance on genetics; US cultural diplomacy during and after the Cold War; and the role of popular music as a universal cultural ambassador. Well positioned at the cutting edge of Cold War studies, this important work illuminates some of the striking paradoxes involved in the production and reception of culture in East and West.

Industrial Aviation Management

Hoover Press

Cette thèse analyse les

transformations des relations industrielles verticales et plus particulièrement le glissement actuel de la fonction de sous-traitant de premier rang, vers une fonction de firme pivot, qui est un acteur intermédiaire entre le donneur d'ordres et les sous-traitants de second rang. L'objectif est de caractériser cette fonction d'intermédiation, en se basant sur la segmentation stratégique de la chaîne des fournisseurs et en prenant pour exemple l'organisation industrielle d'Airbus. Deux modes de coordination "arm's length" et "systems integration" coexistent au sein d'une même architecture industrielle. Le recours à l'un ou l'autre varie en fonction de la politique d'achat et du degré stratégique des systèmes sous-traités. L'argumentation s'articule en de deux parties. La première revient sur la nature des relations verticales dans le cadre de productions complexes, en mobilisant la théorie des ressources et des compétences. La seconde caractérise et définit la firme pivot et analyse les transformations du système

productif Airbus, en éclairant la stratégie d'achat et l'émergence d'un mode de coordination dual des sous-traitants de premier rang. L'architecture industrielle d'Airbus s'organise autour de firmes pivots.

China's Influence and American Interests JHU Press

This is the United Nations definitive report on the state of the world economy, providing global and regional economic outlook for 2020 and 2021.

Produced by the Department of Economic and Social Affairs, the five United Nations regional commissions, the United Nations Conference on Trade and Development, with contributions from the UN World Tourism Organization and other intergovernmental agencies.

The Business Week Springer
While Americans are generally aware of China's ambitions as a global economic and military superpower, few understand just how deeply and assertively that country

has already sought to influence American society. As the authors of this volume write, it is time for a wake-up call. In documenting the extent of Beijing's expanding influence operations inside the United States, they aim to raise awareness of China's efforts to penetrate and sway a range of American institutions: state and local governments, academic institutions, think tanks, media, and businesses. And they highlight other aspects of the propagandistic "discourse war" waged by the Chinese government and Communist Party leaders that are less expected and more alarming, such as their view of Chinese Americans as members of a worldwide Chinese diaspora that owes undefined allegiance to the so-called Motherland. Featuring ideas

and policy proposals from leading China specialists, China's Influence and American Interests argues that a successful future relationship requires a rebalancing toward greater transparency, reciprocity, and fairness. Throughout, the authors also strongly state the importance of avoiding casting aspersions on Chinese and on Chinese Americans, who constitute a vital portion of American society. But if the United States is to fare well in this increasingly adversarial relationship with China, Americans must have a far better sense of that country's ambitions and methods than they do now.
