Short for automatic electric gun, AEG is a type of battery powered air gun capable of full & semi auto firing. An electric motor inside the AEG rotates a series of gears sequentially to drive the piston, which in turn compresses the spring. When the spring is released, the piston is being pushed forward to produce compressed air and propel the bullets. Due to such a complex internal structure, power upgrade is never easy. There is no substitute for good old fashioned know how. By upgrading the gun yourself, you are knocking out the hardest part of it first, knowing what goes where. The 2016/17 Edition of this book presents new concepts and practical skills reflecting the latest changes and trends in the airsoft industry. New technologies such as Electric Programmer, Electric Blowback EBB, RDP Rapid Deploy Pistol and Electric Recoil Gun ERG are also included in the coverage. After trying out the tricks and tips suggested in this book, never hesitate to contact us should you believe there are mistakes waiting to be corrected (there are always better ways of doing things...).

The original BSD manuals (Base Shop Data) for the Browning caliber .30, caliber .50 machine guns and .30 caliber BAR were originally compiled by the United States Ordnance Department for the purpose of training U.S. Ordnance armorers how to disassemble, overhaul and reassemble these weapons. The World War II BSDs were well illustrated with clear line drawings and written description. These rare BSDs have been digitally restored and reformatted for presentation in this manual. Today's enthusiast will find this manual invaluable for maintaining or repairing Browning firearms."

The Ruger 10/22 is one of the most popular .22-caliber rifles of all time. It is relatively inexpensive, exceptionally reliable and accurate, and easy to work on, and parts are widely available. But as good as these versatile little rifles are, they can be made even better with a little work on their triggers, actions and barrels. This work is easy to do, even for people with little or no machining or gunsmithing experience, and it is inexpensive. And after you have customized your 10/22, why not go the extra step and add a legal suppressor so that you can use your rifle for animal control, in survival situations or just to save your hearing? With this book and very

little time, effort and money, you can turn your Ruger 10/22 into the ultimate do-anything weapon.

Military Simulation (MILSIM) operations are not your run of the mill airsoft event. By their very nature, MILSIM events are intended to simulate military operations including the confusion and chaos that come with them. This training manual is not intended to teach basic airsoft skills or to provide recommendations for what equipment to buy for MILSIM events. Instead, it is about Tactics, Techniques and Procedures (TTPs) that will assist airsoft players, teams and other small tactical elements to out-manuever and defeat the opposing force to achieve victory at MILSIM events. This training manual begins by teaching airsoft players basic field-craft skills. Other topics including communications, close quarters battle techniques, battlefield formations, land warfare tactics, techniques and procedures build on that basic foundation. It is also intended to teach teams and other small tactical elements how to move tactically on the MILSIM battlefield, how to use various forms of communication during operations, how to use drills to increase the survivability how to react to enemy contact, how to flank the enemy and how to use close quarters battle techniques and procedures to clear building rooms, hallways and stairways. It also explains the importance of communications, battle drills and security as well as how to apply these concepts to MILSIM. This tactical primer and training manual is designed to provide the tools to small teams and elements necessary to embrace the chaos on the MILSIM battlefield, to take the fight to the enemy and to achieve victory. More importantly, this tactical primer and training manual is intended to provide a framework for airsoft teams and tactical elements to modify the tactics, techniques and procedures contained herein to better fit their play style and to make them more effective. On the MILSIM battlefield, you must be more effective, more efficient and more flexible than your enemy to prevail. It is game of wits where the best tactics win.

In light of the 2nd Amendment debates, shooting may become the national passtime. To act responsibly within the 2nd Amendment, means knowing how to properly "bear arms". Knowing involves understanding firearm types, firearm operation, ammunition, internal ballistics, and shooting. These require training, especially shooting. Whether you own or plan to own a handgun for recreation, competition, or self-defense, training is of the utmost importance. When you fire a projectile (bullet) from a firearm, you are responsible for where it goes. You need to understand how fast it travels, how far it can travel, and how accurate your firearm is in delivering the projectile to your intended target. Yes, bearing arms is a right, but not one to be taken lightly. Firing a handgun is a grave responsibility and must be done correctly and with a full understanding of all the components that make up "shooting".
