The book that is providing a storm of controversy, from 'Israel's bravest

historian' (John Pilger) Renowned Israeli historian, Ilan Pappé's groundbreaking work on the formation of the State of Israel. 'Along with the late Edward Said, Ilan Pappé is the most eloquent writer of Palestinian history.' NEW STATESMAN Between 1947 and 1949, over 400 Palestinian villages were deliberately destroyed, civilians were massacred and around a million men, women, and children were expelled from their homes at gunpoint. Denied for almost six decades, had it happened today it could only have been called 'ethnic cleansing'. Decisively debunking the myth that the Palestinian population left of their own accord in the course of this war, Ilan Pappé offers impressive archival evidence to demonstrate that, from its very inception, a central plank in Israel's founding ideology was the forcible removal of the indigenous population. Indispensable for anyone interested in the current crisis in the Middle East. *** 'Ilan Pappé is Israel's bravest, most principled, most incisive historian.' JOHN PILGER 'Pappé has opened up an important new line of inquiry into the vast and fateful subject of the Palestinian refugees. His book is rewarding in other ways. It has at times an elegiac, even sentimental, character, recalling the lost, obliterated life of the Palestinian Arabs and imagining or regretting what Pappé believes could have been a better land of Palestine.' TIMES LITERARY SUPPLEMENT 'A major intervention in an argument that will, and must, continue. There's no hope of lasting Middle East peace while the ghosts of 1948 still walk.' The enlightening, best-selling book on understanding sustainable energy and how we can make energy plans that add up. If you've ever wondered how much energy we use, and where it comes from – and where it could come from – but are fed up with all the hot air and 'greenwash', this is the book for you. Renewable resources are 'huge', but our energy consumption is also 'huge'. To compare 'huge' things with each other, we need numbers, not adjectives. Sustainable Energy – without the hot air addresses the energy crisis objectively, cutting through all the contradictory statements from the media, government, and lobbies of all sides. It gives you the numbers and the facts you need, in bite-sized chunks, so you can understand the issues yourself and organises a plan for change on both a personal level and an international scale – for Europe, the United States, and the world. In case study format, this informative book also answers questions surrounding nuclear energy, the potential of sustainable fossil fuels, and the possibilities of sharing renewable power with foreign countries. Written by David MacKay, who was an esteemed Professor of Engineering at the University of Cambridge and Chief Scientific Advisor to the UK Department of Climate Change, this is an uplifting, jargon-free and informative read for all. In it, David debunks misinformation and clearly explains the calculations of expenditure per person to encourage people to make individual changes that will benefit the world at large. If you've thrown your hands up in despair thinking no solution is possible, then read this book - it's an honest, realistic, and humorous discussion of all our energy options.
